

## FCC ID: VYVBT4D02

According to KDB 447498 D01 General RF Exposure Guidance v05r02, section 4.3.1

- 1) The 1-g and 10-g SAR test exclusion thresholds for 100MHz to 6GHz at test separation distances  $\leq 50$  mm are determined by:

$$\frac{[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})]}{f(\text{GHz})} \leq 3.0 \text{ for 1-g SAR and } \leq 7.5 \text{ for 10g extremity SAR.}$$

1. SAR test exclusion threshold Frequency : 2 441 MHz, min. separation distances :5 mm, Max. power with turn-up tolerance : 1mW (typ -2dBm to 0dBm)

$$\frac{[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})]}{f(\text{GHz})} = 0.312 < 3.0$$

2. Conclusion : No SAR is required.
