Results

Method Clause	Test Description	Applied	Results	Comments
6.2	Powerline Conducted Emissions	Yes	Pass	
6.5, 6.6, 11.12.1, 11.13.2	Spurious Radiated Emissions	Yes	Pass	
11.6	Duty Cycle	No	N/A	Completed for LMA under PAYR0005.1
11.8.2	Occupied Bandwidth	No	N/A	Completed for LMA under PAYR0005.1
11.9.2.2.4	Output Power	No	N/A	Completed for LMA under PAYR0005.1
11.10.2	Power Spectral Density	No	N/A	Completed for LMA under PAYR0005.1
11.11	Band Edge Compliance	No	N/A	Completed for LMA under PAYR0005.1
11.11	Spurious Conducted Emissions	No	N/A	Completed for LMA under PAYR0005.1

Deviations From Test Standards

None

Approved By:

Kyle Holgate, Operations Manager

Product compliance is the responsibility of the client; therefore, the tests and equipment modes of operation represented in this report were agreed upon by the client, prior to testing. The results of this test pertain only to the sample(s) tested. The specific description is noted in each of the individual sections of the test report supporting this certificate of test. This report reflects only those tests from the referenced standards shown in the certificate of test. It does not include inspection or verification of labels, identification, marking or user information.

REVISION HISTORY

Revision Number		Description	Date	Page Number
00		None		

ACCREDITATIONS AND AUTHORIZATIONS

United States

FCC - Designated by the FCC as a Telecommunications Certification Body (TCB). Certification chambers, Open Area Test Sites, and conducted measurement facilities are listed with the FCC.

A2LA - Accredited by A2LA to ISO / IEC 17065 as a product certifier. This allows Northwest EMC to certify transmitters to FCC and IC specifications.

NVLAP - Each laboratory is accredited by NVLAP to ISO 17025

Canada

IC - Recognized by Industry Canada as a Certification Body (CB). Certification chambers and Open Area Test Sites are filed with IC.

European Union

European Commission – Validated by the European Commission as a Notified Body under the R&TTE Directive.

Australia/New Zealand

ACMA - Recognized by ACMA as a CAB for the acceptance of test data.

Korea

MSIP / RRA - Recognized by KCC's RRA as a CAB for the acceptance of test data.

Japan

VCCI - Associate Member of the VCCI. Conducted and radiated measurement facilities are registered.

Taiwan

BSMI – Recognized by BSMI as a CAB for the acceptance of test data.

NCC - Recognized by NCC as a CAB for the acceptance of test data.

Singapore

IDA – Recognized by IDA as a CAB for the acceptance of test data.

Israel

MOC – Recognized by MOC as a CAB for the acceptance of test data.

Hong Kong

OFCA – Recognized by OFCA as a CAB for the acceptance of test data.

Vietnam

MIC – Recognized by MIC as a CAB for the acceptance of test data.

SCOPE

For details on the Scopes of our Accreditations, please visit:

MEASUREMENT UNCERTAINTY

Measurement Uncertainty

When a measurement is made, the result will be different from the true or theoretically correct value. The difference is the result of tolerances in the measurement system that cannot be completely eliminated. To the extent that technology allows us, it has been our aim to minimize this error. Measurement uncertainty is a statistical expression of measurement error qualified by a probability distribution.

A measurement uncertainty estimation has been performed for each test per our internal quality document QM205.4.6. The estimation is used to compare the measured result with its "true" or theoretically correct value. The expanded measurement uncertainty ($K=2$) can be found included as part of the applicable test description page. Our measurement data meets or exceeds the measurement uncertainty requirements of the applicable specification; therefore, the test data can be compared directly to the specification limit to determine compliance. The calculations for estimating measurement uncertainty are based upon ETSI TR 100 028 (or CISPR 16-4-2 as applicable), and are available upon request.

The following table represents the Measurement Uncertainty (MU) budgets for each of the tests that may be contained in this report.

Test	+ MU	- MU
Frequency Accuracy (Hz)	0.0007%	-0.0007%
Amplitude Accuracy (dB)	1.2 dB	-1.2 dB
Conducted Power (dB)	0.3 dB	-0.3 dB
Radiated Power via Substitution (dB)	0.7 dB	-0.7 dB
Temperature (degrees C)	0.7°C	-0.7°C
Humidity (% RH)	2.5% RH	-2.5% RH
Voltage (AC)	1.0%	-1.0%
Voltage (DC)	0.7%	-0.7%
Field Strength (dB)	5.2 dB	-5.2 dB
AC Powerline Conducted Emissions (dB)	2.4 dB	-2.4 dB

PRODUCT DESCRIPTION

Client and Equipment Under Test (EUT) Information

Company Name:	PayRange Inc.
Address:	919 SW Taylor St. Suite 500
City, State, Zip:	Portland, OR 97205
Test Requested By:	Mike Mitchell
Model:	BluKey Modem in BluKey and BluKey USB Hosts
First Date of Test:	July 12, 2016
Last Date of Test:	July 19, 2016
Receipt Date of Samples:	July 12, 2016
Equipment Design Stage:	Production
Equipment Condition:	No Damage

Information Provided by the Party Requesting the Test

Functional Description of the EUT:

Wireless Payment Device using a Bluetooth Low Energy 4.1 radio module.

The client, Mike Mitchell of Payrange, Inc. attests that the maximum possible source based duty cycle is 20.1%. This is based upon the following:

- The Bluetooth Low Energy protocol limits transmit to 6 packets of 376uS each in a 7.5mS interval. Therefore, the maximum duty cycle is 30%.
- For compatibility reasons, the radio SoC is programmed to further limit the duty cycle to 4 packets within a 7.5ms period. Therefore, the maximum duty cycle is actually 20.1%.

The source based duty cycle correction factor is: $20 \cdot \log(0.201) = -13.9$ dB.

Testing Objective:

To demonstrate compliance of the Bluetooth radio to FCC 15.247 requirements for a limited modular approval. Testing of the antenna port conducted direct connect requirements was completed under PAYR0005.1.

MODIFICATIONS

Equipment Modifications

Item	Date	Test	Modification	Note	Disposition of EUT
1	7/12/2016	Spurious Radiated Emissions	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	EUT was taken home by the client before the next scheduled test.
2	7/19/2016	Powerline Conducted Emissions	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	Scheduled testing was completed.

POWERLINE CONDUCTED EMISSIONS

TEST DESCRIPTION

Using the mode of operation and configuration noted within this report, conducted emissions tests were performed. The frequency range investigated (scanned), is also noted in this report. Conducted power line measurements are made, unless otherwise specified, over the frequency range from 150 kHz to 30 MHz to determine the line-to-ground radio-noise voltage that is conducted from the EUT power-input terminals that are directly (or indirectly via separate transformer or power supplies) connected to a public power network. Per the standard, an insulating material was also added to ground plane between the EUT's power and remote I/O cables. Equipment is tested with power cords that are normally used or that have electrical or shielding characteristics that are the same as those cords normally used. Typically those measurements are made using a LISN (Line Impedance Stabilization Network), the 50ohm measuring port is terminated by a 50ohm EMI meter or a 50ohm resistive load. All 50ohm measuring ports of the LISN are terminated by 50ohm. The test data represents the configuration / operating mode/ model that produced the highest emission levels as compared to the specification limit.

SPURIOUS RADIATED EMISSIONS

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data. The test data represents the configuration / operating mode/ model that produced the highest emission levels as compared to the specification limit.

TEST DESCRIPTION

The highest gain of each type of antenna to be used with the EUT was tested. The EUT was configured for low, mid, and high band transmit frequencies. For each configuration, the spectrum was scanned throughout the specified range. In addition, measurements were made in the restricted bands to verify compliance. While scanning, emissions from the EUT were maximized by rotating the EUT on a turntable, adjusting the position of the EUT and the EUT antenna in three orthogonal axis, and adjusting measurement antenna height and polarization. A preamp and high pass filter were used for this test in order to provide sufficient measurement sensitivity.

The source based duty cycle correction factor is: $20 \cdot \log(0.201) + 13.9$ dB. Please see Product Description for details.

SPURIOUS RADIATED EMISSIONS

PSA-ESCI 2016.04.26.1

Work Order:	PAYR0010	Date:	07/12/16	
Project:	None	Temperature:	23.8 °C	
Job Site:	EV01	Humidity:	44.8% RH	
Serial Number:	See Configuration	Barometric Pres.:	1025 mbar	
EUT:	BluKey			
Configuration:	1			
Customer:	PayRange Inc.			
Attendees:	Mike Mitchell			
EUT Power:	24VDC			
Operating Mode:	On, Tx Continuous BLE			
Deviations:	None			
Comments:	Please reference the data comments for EUT orientation, frequency and channel. The client attested to a normal operating duty cycle of 20%. Per ANSI C63.10:2013 the Duty Cycle was adjusted upward to correct for operating at a measured 63% duty cycle while under test and downward for a 20% duty cycle normal operating condition.

SPURIOUS RADIATED EMISSIONS

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data. The test data represents the configuration / operating mode/ model that produced the highest emission levels as compared to the specification limit.

TEST DESCRIPTION

The highest gain of each type of antenna to be used with the EUT was tested. The EUT was configured for low, mid, and high band transmit frequencies. For each configuration, the spectrum was scanned throughout the specified range. In addition, measurements were made in the restricted bands to verify compliance. While scanning, emissions from the EUT were maximized by rotating the EUT on a turntable, adjusting the position of the EUT and the EUT antenna in three orthogonal axis, and adjusting measurement antenna height and polarization. A preamp and high pass filter were used for this test in order to provide sufficient measurement sensitivity.

The source based duty cycle correction factor is: $20 \cdot \log(0.201) + -13.9$ dB. Please see Product Description for details.

SPURIOUS RADIATED EMISSIONS

PSA-ESCI 2016.04.26.1
EmiR5 2016.04.26.1

Work Order:	PAYR0010	Date:	07/12/16	
Project:	None	Temperature:	23.8 °C	
Job Site:	EV01	Humidity:	44.8% RH	
Serial Number:	See Configuration	Barometric Pres.:	1025 mbar	
EUT:	BluKey USB	Tested by:	Brandon Hobbs	
Configuration:	2			
Customer:	PayRange Inc.			
Attendees:	Mike Mitchell			
EUT Power:	5VDC			
Operating Mode:	On, Tx Continuous BLE			
Deviations:	None			
Comments:	Please reference the data comments for EUT orientation, frequency and channel. The client attested to a normal operating duty cycle of 20%. Per ANSI C63.10:2013 the Duty Cycle was adjusted upward to correct for operating at a measured 63% duty cycle while under test and downward for a 20% duty cycle normal operating condition.
