CAUTION
Product Damage Hazard

- DO NOT** use the probe on cold steel immediately after welding. Let the part cool down prior to testing.
- DO NOT** attempt to cut through a weld or weld joint.
- DO NOT** place the MATHSON on any surface that is not flat.
- DO NOT** step on the probe until you hold a hook.
- DO NOT** use cleaning products containing alcohol, petroleum, benzene or acetone. All of these can damage the device.
- DO NOT** expose the MATHSON to high humidity or moisture. If exposed to moisture, wipe it with a dry, lint-free cloth.

Should the probe be in a cold place when used on a hot part, it will be damaged by the heat from the part. Do not use the probe on a hot part.

Apple's Lockdown technology is the first step in a chain of events that leads to public, corporate, and governmental use of surveillance and imprisonment to control the flow of information. The first step is a subtle one: the use of a single word to describe a wide range of different concepts. From the date of original publication, this narrowly defined language charged engineers with very specific tasks and goals.

Apple's calculated choice of words under this code language was the result of a conceptual design. The security group that created state-control software, engineers, and operators must have often spoken with the same language as the FBI and the NSA.

The security-related software that the NSA/NSAID group used to assemble its programs according to the NSA's operational instructions, the product of a small or medium-sized engineering or computer science department, was not the NSA's own. It was the product of a small team of engineers or computer scientists or an application or the user that had created an interface to receive the product.

Engineers, computer scientists, the NSA, and the NSAID group used the phrase *key* to refer to the NSAID group's code when they spoke to one another. Furthermore, neither public, institutional nor corporate use of the word *key* was intended to refer to the NSAID group's code.

Furthermore, engineers and the NSA and its online website (www.fednet.gov/engines/engines.asp) and the NSAID group's website (www.fednet.gov/engines/engines.asp) used the phrase *key* to refer to the NSAID group's code when they spoke to one another.
