Quick Guide of App

How to share the device with my family

Open: A widget's Tool/Settings (⚙) - Family Sharing - Share (⚙)

... Firstly, invite/tag your variable - the new device's share via QR code, scanning, and so, you can do transfer device.

The new user has to download the App and create a Home on their personal device.

Share via QR Code:

- Tap the Share via QR Code icon (📷), it will show a QR code in a while.

- Open the their phone's new user's device, tap "+" icon, then tap the Scan icon at the top right corner, scan the QR code.

- You will see Share Successfully. And the new user will add the device to his/her ... device automatically.

Share via email:

- Tap the Share via Email icon (✉), then input the new user's email to be share.

- Tap confirm. You will see Share Successfully. And the new user will see the shared device in his/her own account.

Transfer device:

- Tap the Transfer icon (➡), then enter the new user's email address. If you want ... these enabled devices to an existing account to your owner's shared account.

- Tap confirm. Then transfer successfully.

Notes

Only the owner account can change setting, delete videos, and share device. Shared and custom PIN have these options.

How many users can view the device at the same time?

The owner account can share to 8 other accounts. Up to 8 users may view the video feed at a time, but only 1 user can control the camera.

Is the 5GHz Wi-Fi supported?

No, it only works with 2.4GHz Wi-Fi.

Why is my Wi-Fi signal poor?

Your device may be too far away from your wireless router or you may have an obstruction between that reduce signal strength. You might try repositioning your camera or getting a signal extender/booster for your wireless router.

Why is my device offline?

Offline means device is disconnected. There could be several reasons:

1. The camera is out of power.
Please check the wire and make sure the device is still powered.

2. Wi-Fi does not have the password from Wi-Fi Environment changed. Or Wi-Fi environment is 2.4GHz only, please make sure your Wi-Fi compatible connector to be connected and a secure distance when in the device.

When Wi-Fi is not stable, it is likely to get offline or delay often. You can go to the router the clock, see if Wi-Fi is it works, then test that the device is placed Wi-Fi router is it available.

How to adjust Motion detection Sensitivity

From the home page, tap Settings icon, then tap the Motion Detection icon.

There are several motion detection sensitivity algorithms. With normal motion detection, the doorbell can detect all kinds of movements including people, cars, packages, etc. If the sensitivity is certain on a low sensitivity level, the device will detect only people. Normal motion detection enables you to set the device to record and notify you about every motion, and it is unadjustable.

Example detection sensitivity:

* High: Higher sensitivity of human targets. It will record and send alerts. Mode: recording of human targets.
* Low: Lower sensitivity of human targets. It will record. Mode:

How to enable Notifications on my phone

There are notifications settings in Aladdin Alert App, and in mobile settings.

1. Open Aladdin Alert App, from Device page, tap Settings icon, next tap Motion Detection from settings menu → Enter Notification switch menu.

2. Open mobile settings, find App Management and Notification Settings, then find the Motion Detection push notification and switch it on to enable it for Aladdin Alert.
