

Engineering Test Report No. 2302027-03					
Report Date	November 16, 2023				
Manufacturer Name	Elkay Manufacturing Company				
Manufacturer Address	2222 Camden Ct. Oak Brook, IL 60523				
Product Name Brand/Model No.	Connected Enhanced EZH20 Bottle Filling Station and Cooler Model No.: LZSTL8WSSP-W1				
Date Received	October 30, 2023				
Assessment Date	November 15, 2023				
Specifications	FCC 47 CFR Part 2.1093 KDB, 447498 D01 OET Bulletin 65:1997 RSS-102				
Test Facility	Elite Electronic Engineering, Inc. 1516 Centre Circle, Downers Grove, IL 60515				
Signature	MARK E. LONGINOTTI				
Tested by	Mark E. Longinotti				
Signature	Raymond J. Kloude				
Approved by	Raymond J. Klouda, Registered Professional Engineer of Illinois – 44894				
PO Number	CC				
This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

1. Report Revision History

Revision	Date	Description
-	16 NOV 2023	Initial Release of Engineering Test Report No. 2302027-03

2. Introduction

The FCC and Innovation, Science and Economic Development Canada publish standards regarding the evaluation of the RF Exposure hazard of radio communications devices. An evaluation has been performed on the Elkay Manufacturing Company Connected Enhanced EZH20 Bottle Filling Station and Cooler, Model No. LZSTL8WSSP-W1 pursuant to the relevant requirements.

3. Subject of Investigation

This document presents the demonstration of RF Exposure compliance on a Connected Enhanced EZH20 Bottle Filling Station and Cooler, (hereinafter referred to as the Equipment under Test (EUT)). The EUT was identified as follows:

EUT Identification				
Description Connected Enhanced EZH20 Bottle Filling Station and Cooler				
Model/Part No.	LZSTL8WSSP-W1			
S/N	4310213587			
Radio Access Technology 1	NFC			
Bands of Operation	13.56MHz			
Field Strength at Fundamental	37.9 dBuV/m at 30 meters			
Radio Access Technology 2	LoRa radio module (FCC ID: T9JRN2903)			
Bands of Operation	902MHz – 928MHz			
Field Strength at Fundamental 114.6 dBuV/m at 3 meters				

4. Standards and Requirements

The tests were performed to selected portions of, and in accordance with the following specifications.

- 47 CFR Parts 1.1310, 2.1091 and 2.1093 Code of Federal Regulations, Title 47, Telecommunications
- KDB 447498 D01 "RF Exposure Procedures and Equipment Authorization Polices for Mobile and Portable Devices, General RF Exposure Guidance v06"
- OET Bulletin 65 Edition 97-01:1997 "Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields"
- ANSI/IEEE C95.1:1992 "Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz,"
- RSS-102, Issue 5 Radio Frequency (RF) Exposure Compliance of Radiocommunication Apparatus (All Frequency Bands

5. Sample Calculations

The far field power density can be calculated using the following formula:

$$S = \frac{PG}{4\pi R^2} \tag{1}$$

where P is the transmit output power (mW), G is the maximum antenna gain relative to an isotropic antenna (linear) and R is the evaluation distance (cm).

In cases where multiple antennas are utilized for a single signal, the following formula is applied to calculate the maximum antenna gain:

$$Gain (dBi) = G + 10 \log N \tag{2}$$

where N is the number of antennas, G is the gain of a single antenna.

A minimum separation distance can be calculated using the following formulas

Minimum Seperation Distance =
$$\sqrt{\frac{PG}{4\pi(Power Density Limit)}}$$
 (3)

where P is the transmit output power (mW) and G is the maximum antenna gain relative to an isotropic antenna (linear).

For sources with frequencies <30MHz

Seperation Distance =
$$R\left(10^{\frac{(FS_{Limit}-FS_R)}{40}}\right)^{-1}$$
 (4)

For sources with frequencies >30MHz

Separation Distance =
$$R\left(10^{\frac{(FS_{Limit} - FS_R)}{20}}\right)^{-1}$$
 (5)

where R is the measurement distance, FS_{Limit} is the field strength limit and FS_R is the measured field strength at distance R.

6. Photographs of EUT

7. Limits and Requirements

7.1. Requirements mandated by the FCC

Equipment pursuing compliance to the requirements with respect to the limits of human exposure to RF provided in FCC 1.1310, need follow the criteria in FCC 1.1307(b)(1).

Equipment exemption qualification must be demonstrated pursuant to FCC 1.1307(b)(3).

For single RF sources (i.e., any single portable device, mobile device or fixed RF source): A single RF source is exempt if:

- FCC 1.1307(b)(3)(i)(A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance.
- FCC 1.1307(b)(3)(i)(B) The available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold Pth (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). Pth is given by:

$$P_{th}(mW) = \begin{cases} ERP_{20cm} \left(\frac{d}{20cm}\right)^x d \le 20cm \\ ERP_{20cm} 20cm < d \le 40cm \end{cases}$$

With

$$x = -\log_{10}\left(\frac{60}{ERP_{20cm}\sqrt{f}}\right)$$

Where f is in GHz, and

$$ERP_{20cm}(mW) = \begin{cases} 2040f & 0.3GHz \le f < 1.5GHz \\ 3060 & 1.5GHz \le f < 6GHz \end{cases}$$

• FCC 1.1307(b)(3)(i)(C) Using Table 1 and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

RF Source Frequency (MHz)	Threshold ERP (watts)
0.3 – 1.34	1920 R ²
1.34 - 30	3450 R ² / f ²
30 – 300	3.83 R ²
300 - 1,500	0.0128 R ²
1,500 - 100,000	19.2 R ²

Multiple RF sources are exempt if:

• FCC 1.1307(b)(3)(ii)(A) The available maximum time-averaged power of each source is no more

than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required).

• FCC 1.1307(b)(3)(ii)(B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph (b)(3)(i)(B) of this section for *Pth*, including existing exempt transmitters and those being added.

b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph (b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

Pi = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source *i* at a distance between 0.5 cm and 40 cm (inclusive).

Pth,*i* = the exemption threshold power (*Pth*) according to paragraph (b)(3)(i)(B) of this section for fixed, mobile, or portable RF source *i*.

ERPj = the ERP of fixed, mobile, or portable RF source *j*.

ERPth,j = exemption threshold ERP for fixed, mobile, or portable RF source *j*, at a distance of at least $\lambda/2\pi$ according to the applicable formula of paragraph (b)(3)(i)(C) of this section.

Evaluatedk = the maximum reported SAR or MPE of fixed, mobile, or portable RF source *k* either in the device or at the transmitter site from an existing evaluation at the location of exposure.

Exposure Limitk = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from § 1.1310 of this chapter.

If it is determined that the equipment under investigation is not exempt from routine evaluation an assessment must be performed to determine compliance in regard to the RF exposure limits by means of measurement or calculation of the electric field, magnetic field or power density. It may be the case that a minimum separation distance will need to be calculated or measured and maintained from the source of RF to meet the basic restrictions.

In environments where the possibility of simultaneous exposure to fields on different frequencies exists, the exposure shall be considered to be additive. The fraction of the recommended limit incurred within each frequency should be determined, and the sum of all fractional contributions should not exceed 1.0.

Per 1.1310(e)(1), the power density shall not exceed the levels below:

Limits for Occupational/Controlled Exposure					
Frequency Range (MHz)	Electric Magnetic Field Field Strength Strength (V/m) (A/m)		Power Density (mW/cm²)		
0.3 - 3.0	614	1.63	*100		
3.0 - 30	1842 / f	4.89 / f	*900 / f ²		
30 – 300	61.4	0.163	1.0		
300 - 1,500		—	f / 300		
1,500 - 100,000	00,000 — — —		5		
	Limits for General/U	ncontrolled Exposure			
Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm²)		
0.3 – 1.34	614	1.63	*100		
1.34 – 30	842 / f	2.19 / f *180			
30 – 300	27.5 0.073		0.2		
300 - 1,500			f / 1500		
1,500 - 100,000		— — 1.0			
f – Frequency in MHz	r Density				

7.2. Requirements mandated by Innovation, Science and Economic Development Canada

The RF exposure level shall be determined by either measurement or by calculating the power density at an evaluation distance of 0.2m, as specified by ANSI/IEEE C95.1-1992.

If it is found that the product meets the low power exclusion level criteria listed in RSS 102 Section 2.5.2, no further RF exposure evaluation is required. The low power exclusion level criteria are given in the following table (f is given in MHz):

RF Source Frequency (MHz)	Threshold ERP (watts)
f < 20 MHz	x ≤ 1
$20 \text{ MHz} \le f < 48 \text{ MHz}$	$x \le \frac{4.49}{f^{0.5}}$
$48 \text{ MHz} \le f < 300 \text{ MHz}$	x ≤ 0.6
$300 \text{ MHz} \le f < 6 \text{ GHz}$	$\mathbf{x} \le (1.31 * 10^{-2}) * \mathbf{f}^{0.6834}$
$6 \text{ GHz} \leq f$	x ≤ 5

If it is determined that the measured or calculated power density does not meet the basic restrictions, a separation distance must be measured or calculated such that the basic restrictions are met.

In environments where the possibility of simultaneous exposure to fields on different frequencies exists, the exposure shall be considered to be additive. The fraction of the recommended limit incurred within each frequency should be determined, and the sum of all fractional contributions should not exceed 1.0. The following formula shall apply:

$$\sum_{i=1}^{n} \frac{S_{C,1}}{S_{L,1}} + \frac{S_{C,2}}{S_{L,2}} + \frac{S_{C,3}}{S_{L,3}} + \dots \frac{S_{C,n}}{S_{L,n}} \le 1$$
(6)

where:

S_c is the measured/calculated power density; S_L is the RF exposure limit.

Per RSS 102 Section 4, the power density	shall not exceed the levels below:
--	------------------------------------

Limits for Occupational/Controlled Exposure						
Frequency Range	Electric Field Strength	Magnetic Field Strength	Power Density			
(MHz)	(V/m)	(A/m)	(W/m²)			
0.003 - 10*	170	180	—			
0.1 – 10*	—	1.6 / f	—			
1.29 – 10*	193 / f ^{0.5}	—	—			
10 – 20	61.4	0.163	10			
20 - 48	129.8 / f ^{0.25}	0.3444 / f ^{0.25}	44.72 / f ^{0.5}			
48 – 100	49.33	0.1309	6.455			
100 – 6000	15.60 f ^{0.25}	0.04138 f ^{0.25}	0.6455 f ^{0.5}			
6000 – 15000	137	0.364	50			
15000 – 150000	137	0.364	50			
150000 – 300000	0.354 f ^{0.5}	9.40x10 ⁻⁴ f ^{0.5}	3.33x10 ⁻⁴ f			
	Limits for General/U	ncontrolled Exposure				
Frequency Range	Electric Field Strength	Magnetic Field Strength	Power Density			
(MHz)	(V/m)	(A/m)	(W/m²)			
0.003 – 10*	83	90	_			
0.1 - 10*		0.73 / f				
1.1 – 10*	87 / f ^{0.5}	—	—			
10 – 20	27.46	0.0728	2			
20 - 48	58.07 / f ^{0.25}	0.1540 / f ^{0.25}	8.944 / f ^{.05}			
48 - 300	22.06	0.05852	1.291			
300 - 6000	3.142 f ^{0.3417}	0.008335 f ^{0.3417}	0.02619 f ^{0.6834}			
6000 - 15000	61.4	0.163	10			
15000 - 150000	61.4	0.163	10			
150000 - 300000	0.158 f ^{0.5}	4.21x10 ⁻⁴ f ^{0.5}	6.67x10 ⁻⁵ f			

f – Frequency in MHz *Limits only apply to Specific Absorption Rate and Nerve Stimulation requirements.

8. Assessment Results

8.1. RF Exposure Evaluation Relevant to the Requirements of the FCC

Radio Access Technology	<i>f</i> Transmit Frequency (MHz)	Electric Field Strength (dBµV/m)*	Field Strength Measurement Distance (m)
NFC	13.56	77.9	3
LoRa	903.0	114.6	3

* - These values were measured at Elite Electronic Engineering.

Radio Access Technology	<i>f</i> Transmit Frequency (MHz)	Electric Field Strength at Separation Distance (V/m)	Power Density at Separation Distance (W/m ²)	Power Density at Separation Distance (mW/cm ²)	General Power Density Limits (mW/cm ²)	Power Density Ratio	∑ Power Density Limit Ratios
NFC	13.56	1.76678	0.00828	0.00083	0.97893	0.000845806	0.029437815
LoRa	903	8.05548	0.17212	0.01721	0.60200	0.028592009	

The equipment under investigation is determined to be exempt from routine evaluation since the sum of the fractional contributions to the applicable thresholds is less than or equal to 1.

8.2. RF Exposure Evaluation Relevant to the Requirements of the ISED

Radio Access Technology	<i>f</i> Transmit Frequency (MHz)	Electric Field Strength (dBµV/m)*	Field Strength Measurement Distance (m)
NFC 13.56		77.9	3
LoRa	903	114.6	3

* - These values were measured at Elite Electronic Engineering.

8.2.1.Assessment Results for Gener	al/Uncontrolled Environments
------------------------------------	------------------------------

Radio Access Technology	<i>f</i> Transmit Frequency (MHz)	Electric Field Strength at Separation Distance (V/m)	Power Density at Separation Distance (W/m ²)	General Power Density Limits (W/m ²)	Power Density Ratio	∑ Power Density Limit Ratios
NFC	13.56	1.76678	0.00828	2.00000	0.00414	0.06696
LoRa	903	8.05548	0.17212	2.73981	0.06282	

Based on the initial assessment above, at a separation distance of 20cm, the EUT meets the limits for General Population/Uncontrolled exposure.

9. Statement of Compliance

The Elkay Manufacturing Company Connected Enhanced EZH20 Bottle Filling Station and Cooler, Model LZSTL8WSSP-W1 is in compliance with the FCC and Innovation, Science and Economic Development Canada requirements for RF Exposure at a minimum separation distance of 20cm.

10. Certification

Elite Electronic Engineering Incorporated certifies that the information contained in this report was obtained under conditions which meet or exceed those specified in the FCC and Innovation, Science and Economic Development Canada requirements for RF Exposure test specifications. The data presented in this test report pertains to the EUT as provided by the customer on the test date specified. Any electrical or mechanical modifications made to the EUT subsequent to the specified test date will serve to invalidate the data and void this certification.
