### **Test Report Cover Sheet**

The testing for the Flush Mount Locator EN5061 was finalized February 21<sup>st</sup>, 2023. There are slight changes between the tested model and the production model. These changes involved removing two unpopulated 0201 pads on the 900 MHz line, which has zero effect on the performance. Via stitching was also added around the motherboard. NCEE has performed a spot check to verify that performance is unchanged within tolerance and a spot check test report was also generated. This is considered a Class 1 Permissive change.
