2.1 TEST STANDARDS

The limit for Maximum Permissible Exposure (MPE) specified in KDB 447498 D01 General RF Exposure Guidance v06 is followed. The gain of the antennas used in the product is extracted from the Antenna data sheets provided and also the maximum total power input to the antenna is measured. Through the Friis transmission formula and the maximum gain of the antenna, we can calculate the distance, away from the product, where the limit of MPE is reached.

Although the Friis Transmission formula is far field assumption, the calculated result of that is an over-prediction for near field power density. It is taken as worst case to specify the safety range.

Separation Distances are illustrated in the following Table. Т

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances \leq 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] • [$\sqrt{f(GHz)}$] ≤ 3.0 for 1-g SAR and ≤ 7.5 for 10-g extremity SAR,where f(GHz) is the RF channel transmit frequency in GHz.

Power and distance are rounded to the nearest mW and mm before calculation The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2.3 TEST RESULT

Turn up Result

| Mode | Turn up Power | | |
|--------------|---------------|--|--|
| BT-GFSK | 0.5±1dBm | | |
| BT-π/4-DQPSK | 1.5±1dBm | | |

The MPE result of worst mode:

| RE Function | Frequency | Max Turn up | Max Turn up | Estimated | Limit | Potio | Result |
|--------------------|-----------|-------------|-------------|-----------|-------|-------|--------|
| RF Function (N | (MHz) | Power (dBm) | Power (mW) | SAR | Limit | Ratio | |
| BT | 2402 | 2.50 | 1.78 | 0.551 | 3 | 0.184 | Pass |

Note:

1. The estimated SAR \leq 3.0 for 1-g SAR, Separation distance \leq 5mm, complies with the exemption requirements.
