Personal and clinical history
 40-year-old male with a long history of
 chronic low back pain, worse in the morning
 and relieved by rest and NSAIDs.
 He reports a recent increase in pain and
 stiffness, particularly in the morning.
 He has no history of trauma, infection,
 or systemic illness.

Physical examination
 The patient is in good health, with no
 significant findings on physical examination.
 The spine shows mild stiffness and
 tenderness in the lower back region.
 There is no leg pain, numbness, or
 weakness.

Investigations
 X-ray of the lumbar spine shows
 degenerative changes, including
 disc space narrowing and osteophyte
 formation.
 MRI of the lumbar spine shows
 disc degeneration and mild
 disc protrusion at the L4-L5 level.
 Blood tests are within normal limits.

Diagnosis
 Chronic low back pain with
 degenerative changes on imaging.

Management
 The patient is advised to continue with
 NSAIDs for pain relief and to engage in
 regular low-impact exercise.
 Physical therapy is recommended to
 improve core strength and flexibility.
 A referral to a pain management
 specialist is considered if symptoms
 persist.

QUESTION
A patient with a 2-week history of
fever, malaise, fatigue, and weight
loss.
A physical examination reveals a 2-cm, painless
mass.

ANSWER
A. *Streptococcus pneumoniae*
B. *Staphylococcus aureus*
C. *Salmonella enteritidis*
D. *Escherichia coli*
E. *Legionella pneumophila*

EXPLANATION
The patient's symptoms are consistent with
fever, malaise, fatigue, and weight loss.
The physical examination reveals a 2-cm, painless
mass.
