

Response to TCB Findings

1. Are all the antennas included in this Permissive Change filing intended for outdoor installation regardless of frequency? Please clarify.

Per Enterasys - All of these antennas are for outdoor use only. The only indoor solution was the RBTES-IA that was approved on the original grant.

2. Do the modifications explained in Firmware Description document require a professional installer. Does the user have any capability not to follow or change any of those settings mentioned.

The modifications explained do not require professional installation. The settings required for outdoor use are enabled automatically when an external antenna is connected.

3. Have antenna orientations of the device been varied to maximize emissions.

The photos provided are of a single orientation for each antenna and do not necessarily represent the worst-case orientation, but all the antennas are maximized during test.
