

Exhibit 12

Tune-Up Procedure

Section 2.1033(c)(9): Tune-up procedure over the power range, or at specific operating power levels.

The **AWS LTE B66a RRH 4x45 Outdoor Transceiver System**, subject of this application, cannot be “tuned-up” by the user. There are no user tune-up features. All tuning is performed by the manufacturer during, and as part of, the manufacturing process. The **B66a RRH** units are tested and verified to provide +30.5 dBm to +46.5 dBm (4T4R) and to +49.5 dBm (2T4R) at each antenna output terminal, with a tolerance of ± 1.0 dB over the entire frequency band, **in the factory during the manufacturing process.**
