1. FYI: May want to consider providing a test setup photos for the MPE measurements in future filings.

[JVC Kenwood - Thank you for advice. We will submit setup photos in the next filing.](#)

2. There may be a typo on you're measurement setting for emissions < 1GHz. The RBW should be 100kHz not 10kHz. This appears throughout the EMC report.

[JVC Kenwood – Typo has been corrected, please refer to the Rev 2 Test report exhibit.](#)

3. A measurement or a calculation of the occupied bandwidths should be provided

[JVC Kenwood - Please refer to the page 44 of the test report.](#)
