TEST REGULATION

FCC Rules and Regulations Part 24 (October 1, 2001)

1900 MHz systems

- O Narrowband PCS
- - Broadband PCS

Test procedure:

The tests were performed according to FCC Rules and Regulations Part 2 (October 1, 2001), and ANSI C63.4 (1992).

GENERAL INFORMATION

Test facility:

| 1) Test Facility located at Kita-Kansai | : 1st and 2nd Open Sites (3 m Site) |
|---|---|
| Test Facility located at Kameoka | : 1st Open Site (3, 10 and 30 m, on common plane) |
| | : 2nd Open Site (3 and 10 m, on common plane) |
| Test Facility located at Tsuru | : Anechoic Chamber (3 and 10 m, on common plane) |
| FCC filing No. : 31040/SIT 1300F2 | |
| | |

 2) KITA-KANSAI TESTING CENTER is recognized under the National Voluntary Laboratory Accreditation Program for satisfactory compliance established in Title 15, Part 285 Code of Federal Regulations.
 NVLAP Lab Code: 200191-0

Definitions for symbols used in this test report:

- Black box indicates that the listed condition, standard or equipment is applicable for this Report.
- ${\rm O}$ Blank box indicates that the listed condition, standard or equipment is not applicable for this Report.

: CFR 47 FCC Rules Part 24 : March 17, 2003

Description of the Equipment Under Test (EUT):

| 1) Name | : GSM-PCS Celluar Phone for USA and EU |
|-------------------------------------|--|
| 2) Model/Type No. | : GX10i |
| 3) Product Type | : Prototype(Serial No.: ES2-160) |
| 4) Category | : Broadband PCS |
| 5) EUT Authorization | : \bigcirc - Verification \bigcirc - Certification \bigcirc - D.o.C. |
| 6) Transmitting Frequency | :1850.2 MHz (512 ch) - 1909.8 MHz (810 ch) |
| 7) Receiving Frequency | :1930.2 MHz (512 ch) - 1989.8 MHz (810 ch) |
| 8) Integrated Antenna | : Shortened Mono-pole Antenna |
| 9) Emission Designations | : 313KGXW |
| 10) Maximum RF Output Power | : 1514.0mW(EIRP) |
| 11) Power Rating | : 3.9VDC |
| 12) Channol Numbers and Frequencies | for DCS 1000MHz |

12) Channel Numbers and Frequencies for PCS 1900MHz

The carrier spacing is 200 kHz.

The carrier frequency is designated by the abaolute frequency channel number(ARFCN). The carrier frequency is expessed in the equation shown as follows:

TX frequency(in MHz) = 1850.2 + 0.2 * (n - 512)RX frequency(in MHz) = 1930.2 + 0.2 * (n - 512)Where n : Channel Number($512 \le n \ge 810$)

13) Modulation Type : GMSK

14) Type of Communication System : GSM

: CFR 47 FCC Rules Part 24 : March 17, 2003

Transmitter Power(EIRP) Measurement (§24.232)

The measurement were performed shown as follows.

Step 1) The test was set-up shown as Fig.2(a). In order to obtain the maximum emission, the EUT is placed at the height 1.2m on the non-conducted support, at the distance 3m from the receiving antenna(Horn Antenna) and rotated around 360 degrees. The receiving antenna height was varied from 1m to 4 m. The EUT on the table was placed to be maximum emission against the receiving antenna polarized (Vertical and Horizontal). Then the meter reading of the spectrum analyzer at the maximum emission was A dB(μ V).

Step 2) The test was set-up shown as Fig.2(b). The EUT was replaced to Horn antenna at the same polarized under the same condition as step 1. The RF power was fed to the transmitting Antenna(horn Antenna) through the RF amplifier from the signal generator. In order to obtain the maximum emission level, the height of the receiving antenna is varied from 1m to 4 m. The level of the signal generator was adjusted so that the meter reading of the spectrum analyzer at the maximum emission was A dB(μ V), same as the recorded level in Step1. Then the RF power into the substitution horn antenna was P(dBm).

The EIRP is calculated in the following equation.

EIRP(dBm) = P (dBm) + Gh(dBi) Where, Gh(dBi) : Gain of the substitution horn antenna

Fig.2 Maximum Transmitter Power (EIRP) Measurement

Page 10 of 46

Unwanted Radiation Measurement (§2.1053,§24.238) - EIRP method -

Step 1) The spurious radiation for transmitter were measured at the distance 3m away from the TUT which was placed on a non-conducted support 1.0m in height and was varying at three orthogonal axes. The receiving antenna was oriented for vertical polarization and varied from 1 m to 4 m until the maximum emission level was detected on the measuring instrument. The EUT was rotated 360 degrees until the maximum emission was received. The measurement was also repeated with the receiving antenna in the horizontal polarization.

This test was carried out using the loop antenna for up to 30MHz, using the half-wave dipole antenna for up to 1GHz and using the horn antenna for above 1GHz.

Step 2) The EIRP measurement was carried out with according to Step 2 in page 7. Then the RF power in the substitution antenna half-wave dipole antenna for up to 1GHz and the substitution horn antenna for above 1GHz.

The EIRP is calculated in the following equation.

A) Up to 1GHz

EIRP(dBm) = P (dBm) + Gd(dBi) - (Balun Loss of the half-wave dipole Ant. (dB)) + Cable Loss(dB) Where, Gd(dBi) : Gain of the substitution half-dipole antenna

B) Above 1GHz EIRP(dBm) = P (dBm) + Gh(dBi) Where, Gh(dBi) : Gain of the substitution horn antenna

The ERP is calculated in the following equation. ERP[dBm] = EIRP (dBm)- Gd(dBi)

The respective calculated EIRP of the spurious and harmonics were compared with the EIRP and ERP of fundamental frequency by specified attenuation limits, $43+10\log_{10}$ (TP in watt)[dB]. Where, TP = Transmitter power at the ANT OUT under test configuration as the handsfree unit used.

The tests were carried out under one test configuration as the handsfree unit used.

Frequency Stability Measurement(§2.1055, §24.235)

a) Frequency Stability Measurement versus Temperature

The EUT was placed in an environmental chamber and was tested in the range from -30 to +50 degrees Celsius. The EUT was stabilized at each temperature. The power(3.9VDC) supplied was applied to the transmitter and allowed to stabilize for 10 minutes. The transmitting frequency was measured at startup and 2 minutes, 5 minutes and 10 minutes after startup. This procedure was repeated from -30 to +50 degrees Celsius at the interval of 10 degrees.

b) Frequency Stability Measurement versus Power Supply Voltage

The EUT was placed in an environmental chamber and was tested at the temperature of +20 degrees Celsius. The EUT was stabilized at the temperature. The power(3.9VDC) and the power(3.7VDC, the Ending Voltage) was applied to the EUTd allowed to stabilize for 10 minutes. The transmitting frequency was measured at startup and 2 minutes, 5 minutes and 10 minutes after startup.

CONFIGURATION OF EUT

The Equipment Under Test (EUT) consists of :

| Description | Applicant (Manufacturer) | Model No. (Serial No.) | FCC ID |
|---|---|---------------------------|-------------|
| GSM-PCS Cellular Phone for USA and EU | Cellular Phone (Sharp Corporation) | | APYHRO00029 |
| Lithium-ION Battery | Sharp Corporation (Sharp Corporation) | XN-1BT11 () | N/A |
| AC Charger | Sharp Corporation (Sharp Corporation) | XN-1QC14 () | N/A |
| Head Set | Sharp Corporation (Sharp Corporation) | () | N/A |

The measurement was carried out with the following equipment connected :

| Description | Grantee/Distributor | Model No. (Serial No.) | FCC ID |
|-------------|---------------------|---------------------------|--------|
| None | | | |

Type of Interference Cable(s) and the AC Power Cord used with the EUT :

| | Description | Port | Shielded Cable | Shell Material | Ferrite Core | Cable Length |
|---|-------------|----------|-------------------|-------------------|-----------------|-----------------|
| 1 | EUT | Serial | NO | Nonmetal | NO | 10 m |
| | AC Charger | | NO | Nonmetal | NO | 1.8 m |
| 2 | EUT | Head Set | NO | Nonmetal | | 1.2 m |
| 2 | Head Set | | NO | Nonmetal | NO | 1.2 m |

Page 20 of 46

Test Configuration:

Operation - mode of the EUT:

The tests were carried out under one modulation type shown as follows : Modulation Burst Signal : DATA TSC 5 in accordance with GSM 05.02.

The Radiated Emission tests were carried under 3 test configurations in page 25 shown as follows:

| | Test Configuration | The condition of the transmitting antenna |
|---|--------------------|---|
| 1 | Single Unit | Integrated antenna |
| 2 | AC Charger used | Integrated antenna |
| 3 | Head Set used | Integrated antenna |

Test system:

The EUT is 1900MHz PCS(GSM) Cellular phone.

The EUT has 2 ports shown as follows :

- 1) Head Set port : is connected to the Head Set.
- 2) Serial port : is connected to the AC Charger or the personal computer.

Special accessories:

None

Detailed Transmitter portion:

| Transmitting frequency | : 1 | 1850.2 MHz(512ch) - 1909.8 MHz(810ch) |
|------------------------|-----|---------------------------------------|
| Local frequency | : 3 | 3860.4 MHz(512ch) - 3979.6 MHz(810ch) |

Detailed Receiver portion:

EUT Modification

- - No modifications were conducted by JQA to achieve compliance to applied levels.
- O To achieve compliance to applied levels, the following change(s) were made by JQA during the compliance test.

— The modification(s) will be implemented in all production models of this equipment. -

SUMMARY

GENERAL REMARKS :

The EUT was tested according to the requirements of FCC Rules and Regulations Part 24 (October 1, 2001) under the test configuration, as shown in page 25.

The conclusion for the test items of which are required by the applied regulation is indicated under the final judgement.

FINAL JUDGEMENT :

The "as received" sample;

- - fulfill the test requirements of the regulation mentioned on page 3.
- O fulfill the test requirements of the regulation mentioned on page 3, but with certain qualifications.
- \odot doesn't fulfill the test regulation mentioned on page 3.

Begin of testing : March 3, 2003

End of testing

: March 11, 2003

Page 37 of 46

```
Sample of calculated result at 3819.600 MHz, as the Minimum Margin point:
Minimum Margin : -13.0 -(-31.6) = 18.6(dB)
The point shown on "_____" is the Minimum Margin Point.
```

Applied limits :

```
Applied limits = 10log[TP(mW)] - [43 + 10log[tp(W)]] = 10log[TP(mW)] - [43 + (10log[TP(mW)] - 30) ]
= -13 [dBm]
Where tp(W) = TP(mW) / 1000 : Transmitter Power at antenna terminal
10log[tp(W)] = 10log[TP(mW)] - 30
```

Note : 1. The spectrum was checked from 9 kHz up to 20 GHz.2. All emissions not listed were found to be more than 20dB below the limit.

Remarks:

| Note 3 | Detector Function | RES. B.W | V.B.W | Sweep T | Span | Corr. Factor * |
