2.5.7 Additional Observations

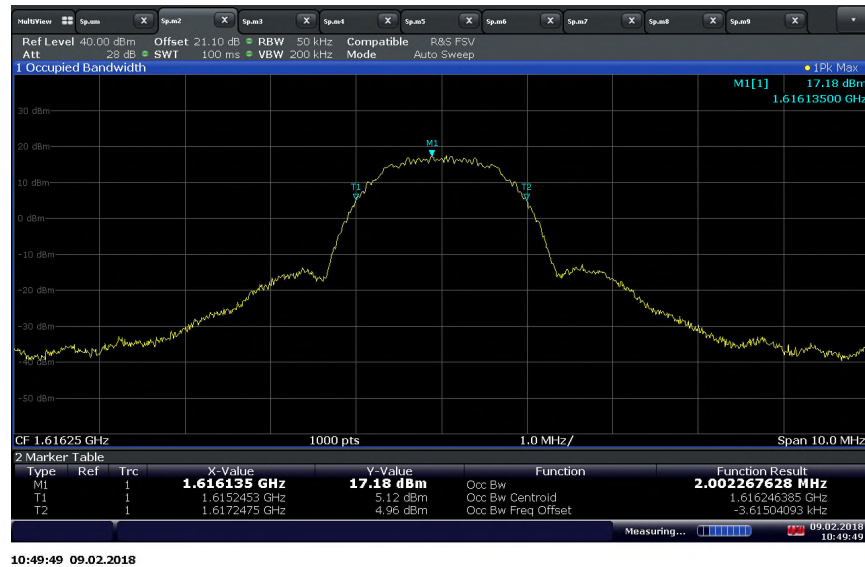

- This is a conducted test.
- For the channel investigated, the reference is the frequency @ 20°C/nominal voltage.
- Limit is 0.001% of reference. Frequency differential higher than this level is considered a failure.
- The frequency stability of the EUT was observed with voltage ranging from 3.1 VDC to 4.2 VDC as declared by the client.
- Temperature range is from -30°C up to 50°C.
- At each observed point, the EUT transmission frequency is compared to the reference.
