

R3

maritime aeronautical
rescue
transceiver

The R3 Maritime Aeronautical VHF Radio is a rugged portable handheld transceiver designed for ship to aircraft emergency communication.

The transceiver operates on the primary and auxiliary aeronautical emergency frequencies 121.5 and 123.1 MHz. The internal single cell lithium battery combines a minimum of replacement cost and typically 24 hours of operation.

Simple controls allow for ease of use in difficult situations.

- High performance AM transceiver
- 121.5 and 123.1MHz operation
- Single cell low cost primary battery
- Simple and safe operation
- PTT for simplex operation
- Manual squelch and volume control
- Approved to ETSI TS 101089

The un-breakable leaf antenna unfolds automatically before operation and the metal housing provides optimum electrical performance (EMC/EMI) and the best mechanical protection.
