

Table 147: Pass Through Statistics page attributes - AP

Attribute	Meaning
IdentityReqSent	This field indicates the number of EAP Identity requests sent through the AP with respect to an SM.
PktsEncapsulated	This field indicates no of packets received from the SM which are encapsulated by the AP.
PktsDecasulated	This field indicates no of packets received from the radius server and are decapsulated by the AP with respect to an SM
AccessAcceptRcvd	This field indicates no of RADIUS Access Accept message received by the AP with respect to an SM.

Interpreting SNMPv3 Statistics

The Statistics > SNMPv3 Statistics page displays all SNMPv3 related statistics. The page is applicable for all type of ODUs of PMP 450 Platform. The SNMPv3 Statistics page is explained in below table.

Table 148: SNMPv3 Statistics page attributes - AP

SNMPv3 Statistics
Statistics for snmpMPDStats group
snmpUnknownSecurityModels = 0
snmplnvalidMsgs = 0

Private and the stand
CicherEncine = disabled
SNMP over IPv6 = disabled

Attribute	Meaning
Statistics for snmpMPDStats group	SNMP Message Processing and Dispatching RFC 3412
snmpUnknownSecurityModels	The total number of packets received by the SNMP engine which were dropped because they referenced a securityModel that was not known to or supported by the SNMP engine.
snmpInvalidMsgs	The total number of packets received by the SNMP engine which were dropped because there were invalid or inconsistent components in the SNMP message.

Attribute	Meaning
snmpUnknownPDUHandlers	The total number of packets received by the SNMP engine which were dropped because the PDU contained in the packet could not be passed to an application responsible for handling the pduType, e.g. no SNMP application had registered for the proper combination of the contextEngineID and the pduType.
usmStatsUnsupportedSecLevels	The total number of packets received by the SNMP engine which were dropped because they requested a securityLevel that was unknown to the SNMP engine or otherwise unavailable.
usmStatsNotInTimeWindows	The total number of packets received by the SNMP engine which were dropped because they appeared outside of the authoritative SNMP engine's window.
usmStatsUnknownUserNames	The total number of packets received by the SNMP engine which were dropped because they referenced a user that was not known to the SNMP engine.
usmStatsUnknownEngineIDs	The total number of packets received by the SNMP engine which were dropped because they referenced a snmpEngineID that was not known to the SNMP engine.
usmStatsWrongDigests	The total number of packets received by the SNMP engine which were dropped because they didn't contain the expected digest value.
usmStatsDecryptionErrors	The total number of packets received by the SNMP engine which were dropped because they could not be decrypted.
snmpTargetSpinLock	This object is used to facilitate modification of table entries in the SNMP-TARGET-MIB module by multiple managers.
snmpUnavailableContexts	The total number of packets received by the SNMP engine which were dropped because the context contained in the message was unavailable.
snmpUnknownContexts	The total number of packets received by the SNMP engine which were dropped because the context contained in the message was unknown.
usmUserSpinLock	The use of usmUserSpinlock is to avoid conflicts with another SNMP command generator application which may also be acting on the usmUserTable.

Attribute	Meaning
vacmViewSpinLock	An advisory lock used to allow cooperating SNMP Command Generator applications to coordinate their use of the Set operation in creating or modifying views.
snmpEngineBoots	It is a count of the number of times the SNMP engine has re-booted/re-initialized since snmpEngineID was last configured
snmpEngineTime time since engine is up	which is the number of seconds since the snmpEngineBoots counter was last incremented

Interpreting syslog statistics

The Statistics > Syslog Statistics page displays statistics of syslog messages. The page is applicable for all modules (AP/SM/BHM/BHS). The Syslog Statistics page is explained in below table.

Table 149: Syslog statistics page attributes - AP/SM/BH

Syslog Transmission Stats	
Syslog Server :	0.0.0.0
Syslog Server Port :	514
Syslog Status :	Enabled
Syslog Message Transmissions :	12781
Syslog Messages Dropped :	0

Attribute	Meaning
Syslog Server	This displays dotted decimal or DNS name (if the DNS is enabled) of the syslog server address.
Syslog Server Port	The syslog server port (default 514) to which syslog messaging is sent.
Syslog Status	This indicates status of syslog messaging. It can be Enable or Disabled based on configuration
Syslog Message Transmissions	This field indicates the count of syslog messages sent to UDP layer.
Syslog Message Dropped	This field indicates the count of dropped syslog messages.

CBRS Statistics for AP/SM

The **Statistics > CBRS** page displays CBRS heart beat statistics and CBRS EIRP Change History. This page is visible only on the AP/BHM. Statistics for the SMs can also be seen on this page, viewed on the AP/BHM Radio. The CBRS statistics for AP/SM page is explained in <u>Table 1</u>.

Table 150: CBRS statistics for AP

Attribute	Meaning
Select CBSD	
Current CBSD	Allows an operator to select the statistics for a particular AP/BHM.
CBSD Statistics	
Channel	The low frequency and high frequency range of a CBRS grant. Each row in the CBSD Statistics table represents a channel range for a currently active CBRS grant. Note that the statistics per row represent all the counts for all the grants in a particular channel range since the statistics were last cleared, assuming a grant is currently held for that channel range.
Total	The total count of the heartbeat requests sent, per frequency range, since the statistics were last cleared.
Missed	The AP sent a heartbeat request but did not receive a heartbeat response.
Failed	The AP received a heartbeat response with a failure code.
Grant Suspend	The total number of heartbeat responses received from the SAS, per frequency range, with reason code suspended grant .
Grant Terminate	The total number of heartbeat responses received from the SAS with reason code 500 - terminated grant . Note that as of System Release 21.0, terminated grants will immediately be removed from the table. But as mentioned previously in the Channel field description, the statistics show all the counts for all grants held in every channel range since the statistics were last cleared. If at any time after a grant terminated channel range and is successful in obtaining a new grant, these counts will include the counts for the previously terminated grant.
Unsync failure	The total number of heartbeat responses received from the SAS with reason code 502 – unsync failure.
EIRP Change Histor	У

Attribute	Meaning
Timestamps	Each row in the EIRP Change History table represents a point in the time when the total EIRP for a particular CBSD was changed. The events are listed in chronological order.
EIRP	The total transmit EIRP the CBSD moved to at this point in time.
Reason	The detailed reason for that EIRP change.

Table 151: CBRS Statistics for SM

Attribute	Meaning
Select CBSD	
Current CBSD	Allows an operator to select to view statistics for a particular SM.
CBSD Statistic	S
Channel	The low frequency and high frequency range of a CBRS grant. Each row in the CBSD Statistics table represents a channel range for a currently active CBRS grant. Note that the statistics per row represent all the counts for all the grants in a particular channel range since the statistics were last cleared, assuming a grant is currently held for that channel range.
Total	The total count of the heartbeat requests sent, per frequency range, since the statistics were last cleared.
Missed	The heartbeat request was sent but no response was received.
Failed	The heartbeat response was received with a failure code.
Grant Suspend	The total number of heartbeat responses received from the SAS, per frequency range, with reason code suspended grant .
Grant Terminate	The total number of heartbeat responses received from the SAS with reason code 500 - terminated grant . Note that as of PMP System Release 21.0, terminated grants will immediately be removed from the table. But as mentioned previously in the Channel

Attribute	Meaning		
	field description, the statistics show all the counts for all grants held in every channel range since the statistics were last cleared. If at any time after a grant termination, an operator moves the Radio's back to the previously terminated channel range and is successful in obtaining a new grant, these counts will include the counts for the previously terminated grant as well as the newly obtained grant.		
Unsync failure	The total number of heartbeat responses received from the SAS with reason code 502 – unsync failure.		
Skipped	The AP did not include this SM in the heartbeat exchange.		
Relative bulk	The total number of heartbeat requests sent for this particular SM that was included in a bulk heartbeat request with other SMs.		
Standalone	The total number of heartbeat requests sent for this particular SM that was sent standalone – not part of a bulk heartbeat request with other SMs.		
EIRP Change History			
Timestamps	Each row in the EIRP Change History table represents a point in the time when the total EIRP for a particular CBSD was changed. The events are listed in chronological order.		
EIRP	The total transmit EIRP the CBSD moved to at this point in time.		
Reason	The detailed reason for that EIRP change. Note that an "EIRP lowered" or an "EIRP increased" reason that does not mention grants is typically a user-initiated change.		

Interpreting Frame Utilization statistics

The Frame Utilization Statistics is a feature helps user to understand how effectively the RF channel is being utilized. This feature allows to check Time Division Duplex (TDD) frame utilization pattern and diagnose for any excessive usage in uplink or downlink direction.

This forms the first step of identifying the TDD frame utilization information. If the user finds excessive utilization based on these stats, the second step would be to take several actions like sectorization, tuning the uplink/downlink ratio etc. to improve RF channel utilization. Efficient use of the TDD frame will help to achieve optimum performance of link.

Note

The backhauls (BHM and BHS) contain only the downlink scheduler-based statistics.

Table 152: Frame utilization statistics for 450m

Attribute	Meaning		
Frame Utilization Interval			
Statistics Display interval	This allows to configure timer interval to monitor and display the frame utilization statistics. It can be configured for 1 minute (low interval), 5 minutes (medium interval) or 15 minutes (high interval) based on requirement.		
Next Update	This field displays when the next update will occur.		
MU-MIMO Utilization			
Slot Grouping - Group Size	This specifies the distribution of group size for the past 1/5/15 minutes. For each group size, from 1 to 7, the table shows the percentage of slots using that group size.		
	• A group size of 1 corresponds to beamformed transmissions.		
	• A group size of 2 to 7 corresponds to MU-MIMO transmissions.		
	Note that for 30 MHz and 40 MHz bandwidths, the UL group size is limited to 3 or smaller.		
Group Forming Statist	ics		
Number of Groups Per Frame	Indicates what percentage of frames in this measurement window had the corresponding number of MU-MIMO groups per frame, and per direction. In the example shown, 5.3% of the frames had 3 different MU-MIMO groups formed. Note that this frame could also contain SU-MIMO scheduled data. The "O ungrouped" shows the percentage of frames that had non-MUMIMO scheduled traffic at all. This frame would have only SU-MIMO scheduled traffic, and/or unused symbols.		
	The "2" and "3" rows always show N/A in the Uplink direction because current PMP software only supports a single MU-MIMO group per frame in the Uplink direction.		
Additional Statistics			
Average MU-MIMO Group Size - Data	This specifies the average number of users in the MU-MIMO groups formed in the last 1/5/15 minutes for data traffic only.		
Total Utilization	This is a percentage of available timeslots used in the past 1/5/15 minutes.		
Multiplexing Gain	This specifies the ratio between the number of logical slots and the number of physical slots used.		
	A physical slot is an OFDM symbol. In non MU-MIMO mode, each logical slot is sent during one physical slot. In MU-MIMO mode a number of logical slots are sent during a physical slot, equal to the number of VCs in the group. A logical slot carries new information; if data is repeated in a group, because some VCs have more data to send then others, then the repeated transmissions are not counted as a logical slots.		
	Without MU-MIMO operation, the multiplexing gain would always be equal to 1.		
	With MU-MIMO operation, this number accounts for parallel transmissions to multiple users in the MU-MIMO group.		

Attribute	Meaning		
	The difference between the Average MU-MIMO Group Size and the Multiplexing Gain is that the Average MU-MIMO Group Size only considers the MU-MIMO groups, and it averages the number of VCs in the Group. The Multiplexing Gain also considers non MU-MIMO transmissions, which are counted as groups of size 1.		
Sector Utilization			
SU-MIMO	This specifies the portion of the Total Utilization used for SU-MIMO transmissions.		
MU-MIMO	This specifies the portion of the Total Utilization used for MU-MIMO transmissions.		
АСК	This specifies the portion of the Total Utilization used for acknowledgments transmission.		
MU-MIMO ACK	This specifies the portion of the Total Utilization used for acknowledgements transmissions that are MU-MIMO scheduled. Currently only the UL direction supports MU-MIMO scheduling of ACK's.		
Broadcast & Multicast	This specifies the portion of the Total Utilization used for broadcast and multicast transmissions.		
Slots Counts - Uplink a	nd Downlink Slot Counts		
Per Frame Average	This indicates the average data per frame in the downlink traffic.		
Low Priority	The number of downlink data slots used for low priority downlink traffic.		
Medium Priority	The number of downlink data slots used for medium priority downlink traffic.		
High Priority	The number of downlink data slots used for high priority downlink traffic.		
Ultra High Priority	The number of downlink data slots used for ultra high priority downlink traffic.		
Note:			
The above Low, Medium, High, and Ultra High Priority Counts are physical slot transmissions. For MU- MIMO scheduling, some transmissions can contain data from more than 1 data channel priority. In those cases, the highest data channel used is "counted" in these statistics, and the other data channels are not, to avoid overcounting.			
Broadcast & Multicast	The number of downlink data slots used for broadcast and multicast traffic.		
Authentication and Configuration	The number of slots used for registration and control message transmissions		
Registration and control	The number of slots used for Authentication and Configuration transmissions.		
MAC Acknowledgements	The number of downlink data slots used as ACKs.		
Contention Slots Average Per Frame	It is the average number of contention slots in a frame for the last duration. Duration is 1/5/15 mins.		

Attribute	Meaning
Bandwidth Requests Received	This indicates the number of Bandwidth Requests received from SMs.
Bandwidth Requests Missed	This indicates how many of Bandwidth Requests are colliding.
Total	This indicates the sum of all downlink data slots used in the configured interval.
Frame Utilization	
Downlink	This indicates the percentage of downlink data slots used against the maximum number of slots possible in the configured interval.
Uplink	This indicates the percentage of uplink data slots used against the maximum number of uplink slots possible in the configured interval.
Bandwidth Request Success	The "Bandwidth Request Success" is a message sent from the SM to the AP asking to be scheduled for bandwidth to send in the uplink. This gets transmitted in the unscheduled portion of the uplink. Unscheduled uplink is defined as Contention Slots + unscheduled uplink slots. Since this is sent in the unscheduled portion of the uplink, it will result in collisions when SMs randomly pick the same slot.
	The "Bandwidth Request Missed" metrics are to add data to know how many of requests are colliding. If it is near 100%, then near all of the SM's bandwidth requests are getting through to the AP, so this a is near perfect scenario. If it is significantly less than that, you may be experiencing uplink latency as your SMs are attempting to request bandwidth and are unable to do so.
	Also note that if it is consistently at 100% the AP may be able to reduce its contention slots to a lower value and gain more data slots.
Maximum possible cou	ints
Downlink	This indicates the maximum possible downlink data slots in the configured interval. This is based on the configuration of Channel Bandwidth, Frame period, uplink/downlink allocation, contention slots and configured Statistics Display interval.
Uplink	This indicates the maximum possible uplink data slots in the configured interval. This is based on the configuration of Channel Bandwidth, Frame period, uplink/downlink allocation, contention slots and configured Statistics Display interval.
Contention	This indicates the maximum possible contention slots.
Packet Discard counts	
Ethernet indiscards	This indicates the number of Ethernet packets discarded in the IN queue.
Ethernet outdiscards	This indicates the number of Ethernet packets discarded in the OUT queue.
Radio indiscards	This indicates the number of packets discarded over radio in the IN queue.
Radio outdiscards	This indicates the number of packets discarded over radio in the OUT queue.

Attribute	Meaning		
Frame Utilization Interval			
Statistics Display interval	This allows to configure timer interval to monitor and display the frame utilization statistics. It can be configured for 1 minute (low interval), 5 minutes (medium interval) or 15 minutes (high interval) based on requirement.		
Next Update	This field displays when the next update will occur.		
Frame Utilization Summary			
Utilization	Total percentage used in the time interval.		
Spectral Efficeincy (user data bits per second per hertz)	Provides an actual measure of how many bits per hertz per second achieved for user data in the most recent frame utilization interval.		
Data to Overhead Percentage	Provides a breakdown of user data to overhead data.		
Data Per Modulation Percentage	Provides a breakdown of data slots used per modulation.		
Data Per QoS Percentage	Provides what percentage of used slots were due to which QoS levels. Note that "AAA" QoS refers to slots used for authentication/authorization/accounting. "Ctl" QoS refers to slots used for system level messages (registration, encryption).		
Bandwidth Request Receive Efficiency	How efficient the SM's Bandwidth Request messages are getting to the AP.		
Interval Slot Count Summary- Used	Provides a summary of actual slot counts rather than the percentages provided in the Frame Utilization Summary.		
Used	Provides a breakdown of total slots used in each direction. It further breaks down the total between data and acks. Finally, it provides an average slots used per TDD frame.		
Modulation (1X : Count of slot containing 1 fragment of user data. 2X: Count of slot containing 2 fragments of user data)	Provides a breakdown of the number of slots used at each modulation.		
Quality of Service	Provides a breakdown of the number of slots used at each QoS level.		
Aknowledgements	Provides the number of slots used for acks. It also provides a new count called Partial.		
Contention	This indicates the maximum possible contention slots.		
Packet Discard counts			
Ethernet indiscards	This indicates the number of Ethernet packets discarded in the IN queue.		

Attribute	Meaning
Ethernet outdiscards	This indicates the number of Ethernet packets discarded in the OUT queue.
Radio indiscards	This indicates the number of packets discarded over radio in the IN queue.
Radio outdiscards	This indicates the number of packets discarded over radio in the OUT queue.

Interpreting Channel Change History statistics

The Channel Change History statistics are available for all PMP AP and BHM products. For non-CBRS deployments, the Authorized Grants column is not be visible, and only user-triggered channel change reasons are displayed.

Frequency (MHz)	Bandwidth (MPIZ)	Tinestang	Reason	Authorized Grants
3625 000	10.0	02/18/2022 : 14 36 26 CST	Grant(s) suspended Channel change triggered by CBRS	1/2
3620 000	29.0	92/18/2022 : 14:50 04 CST	Original channel reauthoriced Channel change triggered by CBRS	2/2
3625 000	10.0	02/18/2022 : 15:06:02 CST	Granf(ik) suspended Channel change biggered by CBRS	1/2
3620 000	20.0	02/18/2022 : 15 10 25 CS7	Original channel reauthorized Channel change triggered by CERS	2/2

3620 000	20.0	02/10/2022 15:25 46 CST	Original channel reauthorized Channel change triggered by CERS	2/2
3625.000	10.0	02/18/2022 15 35 53 CST	Granits) suspended Channel change triggered by CBR5	1/2
3620.000	20.0	03/18/2022 : 15:50 20 CST	Original channel reauthorized Channel change triggered by CBRS	212
3625 000	10.0	02/10/2022 : 16 06 21 CST	Grant(s) suspended Charnel change triggered by CBR5	1/2
3620.000	29.0	02/10/2022 : 16 10:42 CST	Original channel reauthorized Channel change triggered by CERS	2/2
3625 000	10.0	02/18/2022 16:16:37 CST	Grant(s) suspended Channel change triggered by CBRS	1/2
3620 000	20.0	02/10/2022 : 16:25:10 CST	Original channel reauthorized Channel change triggered by CBRS	2/2
3620.000	40.0	02/18/2022 16:25:47 CST	Channel change higgered by user	2/2
3630.000	20.0	02/18/2022 16:35:43 CST	Grant(a) leminated Channel change triggered by CBRS	2/2

Figure 116: The Channel Change History statistics for AP and BHM

Table 154: The Channel Change History statistics for AP and BHM

Attribute	Meaning
Center frequency	The center frequency of the operating channel for the sector. For example, if a CBRS AP holds four 10 MHz multigrants ranging in frequency from 3580 through 3620, the first, second, and fourth 10 MHz channels are authorized while the third channel was suspended, 3590 would be the center frequency displayed here.
Bandwidth	The bandwidth of the operating channel for the sector. For example, if a CBRS AP holds four 10 MHz multigrants ranging in frequency from 3580 through 3620,

Attribute	Meaning
	the first, second, and fourth 10 MHz channels are authorized while the third channel was suspended, 20 MHz would be the bandwidth displayed here.
Timestamp	The time that the AP/BHM switch to the Center Frequency and Bandwidth displayed in this row. The channel changes are displayed in chronological order, with the newest changes at the bottom of the table.
Reason	The particular reason for the channel change. For example, CBRS grant termination.
Authorized Grants	The grants authorized/the total number of grants held by the AP. For example, $\frac{1}{2}$ indicates that 2 CBRS grants are held by the AP, of which only 1 grant is currently in an authorized state.

Spatial Frequency Heatmap

Attribute	Meaning
Instantaneous Distribution	This table is updated every 500 ms and displays the following:
	 Group: Each row corresponds to the top (most active) 1, 2, 8, 16, 32, 64, 128 and 256 VCs.
	 Median Slot Count: Median value of the average number of slots scheduled for the VCs in each group in the past 500 ms.
	LUIDs in Group: List of LUIDs belonging to each bin.

Attribute	Meaning				
Spatial Utilization	This is a table (32 rows) that lists frame utilization for each spatial frequency (SF) range with following information:				
	 Spatial Frequency: Range of spatial frequency for each bin. Each bin includes 32 consecutive spatial frequency values. Azimuth (degrees): Azimuth range in degrees corresponding to the spatial 				
	frequencies of the bin. The zero-degree Azimuth is boresight.				
	Note				
	because for some spatial frequencies the AP generates beams in multiple azimuth directions. The SM can be physically located in any of the azimuth ranges.				
Spatial Utilization (Contd.)	 Instantaneous (%): Frame utilization for the SF bin, updated every 500 ms. The frame utilization percentage accounts for all traffic, sector mode, beamforming mode, and MU-MIMO mode. 				
	 Total (%): Average utilization in the SF bin for the past 1/5/15 minutes, as selected in the Statistics Display interval. 				
	 Max (%): Maximum instantaneous utilization in the 1/5/15 minute interval. Min (%): Minimum instantaneous utilization in the 1/5/15 minute interval. 				
	 VCs in Range: List of VCs with spatial frequency falling in the bin. LUIDs in Range: List of LUIDs with spatial frequency falling in the bin. 				
	Note				
	The size of each SF bin is smaller than the beam generated by the AP during a MU-MIMO transmission. This means that when a VC in a bin is scheduled for a MU-MIMO transmission, the adjacent bins also receive the signal, and the transmission is counted towards their utilization as well. Bins with consistent low utilization indicate the areas of the sector where more SMs could be installed, or the cutomers that could be offered higher data plans.				
Spacial Frequency Heatmap	The spatial frequency heatmap allow the operator to see how the 450m spatial frequency have been occupied (utilised) over the previous hour of operation. There are two heatmaps the first displays downlink utilisation and the lower the uplink utilisation. The heatmaps are useful when operators are identifying:				
	 congested spatial directions spare capacity in spatial directions				
	The heatmap uses a graduated colour scale to represent the percentage utilisation. The graphic to the right-hand side of the heatmap should be used as a key to interpret the GUI. Where dark blue represents zero percent utilisation and red represents 100% utilisation.				

Radio Recovery

This section describes:

- How to recover a PMP/PTP 450i and PMP 450m Series ODUs from configuration errors or software image corruption
- How to override a PMP/PTP 450 Series ODUs from forgotten IP address and password to factory default

Radio Recovery Console- PMP/PTP 450i/450b and PMP 450m

Recovery mode allows to restore IP address and password. Also, it allows new main application software to be loaded even when the integrity of the existing main application software image has been compromised. The most likely cause of an integrity problem with the installed main application software is where the power supply has been interrupted during a software upgrade.

Note

When Recovery has been entered through a power on/off/on cycle, the ODU will revert to normal operation if no web access has been made to the unit within 30 seconds. This prevents the unit remaining inadvertently in recovery following a power outage.

Options in recovery mode are:

- Boot with normal operation
- Boot with default Canopy system software settings
- Load a previous SW image

The last most recent software images loaded to the board are retained. However the factory image is not retained.

Boot with default Canopy system software settings (similar to the hardware Default Plug based on 450 Platforms Family).

Note

The unit may enter recovery console automatically, in response to some failures.

Note

Once the unit has entered recovery, it will switch back to normal operation if no access has been made to the recovery web page within 30 seconds.

Use below procedure to enter in recovery console manually.

Procedure 27 Radio Recovery Console:

1	Apply power to PSU for at least 10 seconds.
2	Remove power from the PSU, and then re-apply it as soon as the power indicator light goes out (about 1 - 2 seconds).
3	When the unit is in recovery mode, access the web interface by entering the default IP address 169.254.1.1. The Recovery Image Warning page is displayed.
4	Review the Boot Selection (Recovery Options attributes).
5	Select a recovery option

Figure 118: Recovery Options page

ormal boot in	General		
44 seconds		Radio Recovery Console	
		0A:00:3E:BB:00:F6	
	Boot Selection		
		Boot - Default Mode	
		Boot Normal	
	Device Information		
	Software Version	CANOPY 14.0	
	IP :	169 254 1 1	
	Netmask	255 255 0.0	
	Gateway	169 254 1 254	

Table 155: Recovery Options attributes

Attribute	Meaning
Boot Selection	Boot - Default Mode: Use this option to temporarily set the IP and Ethernet attributes to factory defaults until the next reboot.
	Boot – Normal: Use this option to reboot the unit.
IP address, Netmask, Gateway	These fields display IP address, Netmask and Gateway of the radio while it is in recovery or default mode.

Note

The radio enters recovery mode when a short power cycle is used. The radio will boot normally if power has been removed for a longer period (typically 5 - 10 seconds).

Default Mode (or Default/Override Plug) - PMP/PTP 450 Series

The default mode allows to temporarily override some PMP/PTP 450 Series ODU settings and thereby regain control of the module by powering the module on with the Default Plug inserted into the unit's synchronization (RJ11) port.

This override plug is needed for access to the module in any of the following cases:

• You have forgotten either

- the IP address assigned to the ODU.
- the password that provides access to the ODU.
- The ODU has been locked by the No Remote Access feature.
- You want local access to a module that has had the 802.3 link disabled in the Configuration page.

You can configure the module such that, when it senses the override plug, it responds by either

- resetting the LAN1 IP address to 169.254.1.1, allowing access through the default configuration without changing the configuration, whereupon you will be able to view and reset any non-default values as you wish.
- resetting all configurable parameters to their factory default values.

Note

The Default Plug is available from Best-Tronics Manufacturing, Inc. See <u>https://btpa.com/Cambium-Products/</u> as Part BT-0583 (RJ-11 Default Plug). Alternatively, you can fabricate an override plug. See Override plug cable in Planning and Installation Guide for pinout.

Using the Default/Override Plug

The following section details usage of the override plug to regain access to PMP/PTP 450 Series ODU.

Note

While the override plug is connected to a PMP/PTP 450 Series ODU, the ODU can neither register nor allow registration of another ODU.

Note

Since the 900 MHz SM is based on the 450 Series, it only supports the "Default Plug" mode of overriding.

Use below procedure to enter in default mode manually.

Procedure 28 Default mode

1	Insert the override plug into the RJ-11 GPS utility port of the module.
2	Power cycle by removing, then re-inserting, the Ethernet cable. RESULT: The module boots with the default IP address of 169.254.1.1, password fields blank, and all other configuration values as previously set.
3	Wait approximately 30 seconds for the boot to complete.
4	Remove the override plug.
5	Set passwords and IP address as desired.
6	Change configuration values if desired.
7	Click the Save Changes button.
8	Click the Reboot button.

Chapter 4: Reference information

This chapter contains reference information and regulatory notices that apply to the 450 Platform Family ODUs.

The following topics are described in this chapter:

- Equipment specifications contains specifications of the 450 Platform Family, ODU specifications including RF bands, channel width and link loss.
- Data network specifications shows the 450 Platform Family Ethernet interface specifications.
- Wireless specifications lists the safety specifications against which 450 Platform Family ODU has been tested and certified. It also describes how to keep RF exposure within safe limits.
- Country specific radio regulations describes how the 450 Platform Family complies with the radio regulations that are enforced in various countries.
- Equipment Disposal describes the Equipment Disposal system for Electronic and Electric Equipment.

Equipment specifications

This section contains specifications of the AP, SM, BHM and BHS associated supplies required for 450 Platform Family installations.

Specifications for 5/6 GHz 450v Series - AP

The 5/6 GHz 450v AP conforms to the specifications listed in below table.

Table 156: 5/6 GHz 450v Series - AP specifications

Category	Specification			
Model Number	450v AP			
Channel Spacing	Configurable on 2.5 MHz increments			
Frequency Range	5125 to 7125 MHz			
Channel Bandwidth	5, 10, 15, 20, 30, and 40 MHz			
Interface				
MAC (Media Access Control) Layer	Cambium Proprietary			
Physical Layer	2x2 MIMO OFDM			
Ethernet Interface	100/1000BASE-T, full duplex, rate auto negotiated (802.3 compliant)			
Protocols Used	IPv4, IPv6, UDP, TCP/IP, ICMP, Telnet, SNMP, HTTP, FTP			
Network Management	IPv4/IPv6 (dual stack), HTTP, HTTPS, Telnet, FTP, SNMPv2c and v3, Cambium Networks cnMaestro			

Category		Specification
MTU		1700 bytes
VLAN		802.1ad (DVLAN Q-inQ), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		
Nominal Receive Sensitivity	5.1 GHz	
(W/FEC) @ 5 MHz Channel	5.2 GHz	
	5.4 GHz	
	5.8 GHz	
	6.1 GHz	
	6.5 GHz	
Nominal Receive Sensitivity (w/ FEC) @ 10 MHz Channel	5.1 GHz	1x = -89.0 dBm, 2x = -85.6 dBm, 3x = -81.0 dBm, 4x = -79.3 dBm, 5x = -76.2 dBm, 6x = -73.4 dBm, 7x = -70.0 dBm, 8x = - 65.8 dBm
	5.2 GHz	1x = -89.0 dBm, 2x = -85.6 dBm, 3x = -81.0 dBm, 4x = -79.3 dBm, 5x = -76.2 dBm, 6x = -73.4 dBm, 7x = -70.0 dBm, 8x = - 65.8 dBm
	5.4 GHz	
	5.8 GHz	
	6.1 GHz	
	6.5 GHz	
Nominal Receive Sensitivity	5.1 GHz	
(w/ FEC) @ 20 MHz Channel	5.2 GHz	
	5.4 GHz	
	5.8 GHz	
	6.1 GHz	
	6.5 GHz	
Nominal Receive Sensitivity	5.1 GHz	
(w/ FEC) @ 40 MHz Channel	5.2 GHz	
	5.4 GHz	
	5.8 GHz	
	6.1 GHz	
	6.5 GHz	
Performance	1	

Category		Specification			
Subscriber Per Sector		Up to 238			
ARQ		Yes			
Cyclic Prefix		1/16			
Frame Period		2.5 ms, 5 ms			
Modulation Levels (Adaptive)		Modulation Levels SNR (in dB)			
		2x	QPSK	10	
		3x	8-QAM	14	
		4x	16-QAM	17	
		5x	32-QAM	20	
		6x	64-QAM	24	
		7x	128-QAM	28	
		8x	256-QAM	32	
Latency		3-5 ms, typical			
Maximum Deployment Range		Up to 40 miles (64 km)			
GPS Synchronization		Yes, via embedded GPS, or Cambium Sync			
Quality of Service		Diffserv QoS			
Link Budget		,			
Antenna Beam Width	5 GHz	90° integrated sector (Dual polarity, H+V))	
Antenna Gain		+16 dBi			
Maximum EIRP		+48 dBm			
Physical		·			
Data, Sync/AUX and SFP	RJ45	1000BASE-T Ethernet Data			
port		• AUX port for UGPS or PoE out to 802.3at			
Antenna Connection		Integrated Sector antenna			
Surge Suppression (with LPU)		EN 61000-4-5: 10x700 μs, 6 kV, EN 61000-4-2: ESD 8 kV contact / 15 kV air			
		Recommended external surge suppressor: Cambium Networks Model # C000000L033A			
Mean Time Between Failure		> 40 Years			
Environmental		IP66, IP67			
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F)			
		0-100% condensing			

Category	Specification		
Wind Survival	200 kph (124 mph)		
Weight	6.3 kg (13.9 lbs), 9.1 kg (20 lbs) with bracket		
Wind Loading - Front Facing	@90 mph / ⁻	144 kph 376 N	
	@110 mph /177 kph 562 N		
Dimension (HxWxD)	673 x 222 x 134 mm (26.5 x 8.75 x 5.3 in.)		
Power Consumption	45W Typical, 55W Max, Using Aux port PoE for another device will increase power draw		
Input Voltage	48-59 VDC, 802.3bt type 4 class 8 (also accepting passive PoE)		
Mounting	Pole mount with included brackets		
Security			
Encryption	FIPS-197 128-bit AES and 256-bit AES		
	P	Note AES-256 requires a license key.	

Category	Specification
Model Number	450v AP
Spectrum	
Channel Spacing	Configurable on 2.5 MHz increments
Frequency Range	5125 to 7125 MHz
Channel Bandwidth	5, 10, 15, 20, 30, and 40 MHz
Interface	
MAC (Media Access Control) Layer	Cambium Proprietary
Physical Layer	2x2 MIMO OFDM
Ethernet Interface	100/1000BASE-T, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used	IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management	HTTP, HTTPS, Telnet, FTP, SNMPv3

Category		Specification

Specifications for 5 GHz PMP 450m Series - AP

The 5 GHz PMP 450m AP conforms to the specifications listed in below table.

Table 157: 5 GHz PMP 450m Series - AP specifications

Category	Specification
Model Number	PMP 450m AP
Spectrum	
Channel Spacing	Configurable on 2.5 MHz increments
Frequency Range	4900 to 5925 MHz
Channel Bandwidth	5, 10, 15, 20, 30, and 40 MHz
Interface	

Category		Specification		
MAC (Media Access Control) Layer		Cambium Proprietary		
Physical Layer		14x14 Multi-User MIMO OFDM		
Ethernet Interface		100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)		
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP		
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v3		
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID		
Sensitivity				
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	4.9 GHz	1x = -99.4 dBm, 2x = -96.9 dBm, 4x = -90.5 dBm, 6x = - 84.3 dBm, 8x = -76.9 dBm		
	5.1 GHz	1x = -100.6 dBm, 2x = -97 dBm, 4x = -90.5 dBm, 6x = - 84 dBm, 8x = -76.3 dBm

Performance	1					
Subscriber Per Sector		Up to 238				
ARQ		Yes				
Cyclic Prefix		1/16				
Frame Period		2.5 ms, 5 ms				
Modulation Levels (Adaptive)		Modulation Levels SNR (in dB)				
		2x	QPSK	10		
		4x	16-QAM	17		
		6x	64-QAM	24		
		8x	256-QAM	32		
Latency		10 ms, typical (MU-MIMO introduces additional latency for the traffic that is MU-MIMO scheduled.)				
Maximum Deployment Range		Up to 40 miles (64 km)				
GPS Synchronization		Yes, via Autosync (UGPS)				
Quality of Service		Diffserv QoS				
Link Budget		-				
Antenna Beam Width	5 GHz	90° integrated sector (Dual polarity, H+V)				
Antenna Gain		+14 dBi				
Maximum EIRP		+48 dBm				
Physical						
Data, Sync/AUX and SFP port	RJ45	• 1000E	3ASE-T Ethernet Data			

Category		Specification		
		AUX port for UGPS or PoE out to 802.3at		
Antenna Connection		Integrated Sector Array		
Surge Suppression (with LPU)		EN61000-4-5: 1.2 us/50 us, 500 V voltage waveform		
		Recommended external surge suppressor:		
		Cambium Networks Model # C000065L007B		
Mean Time Between Failure		> 40 Years		
Environmental		IP66, IP67		
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F)		
		0-95% non-condensing		
Weight	Integrated	Approx. 14.2 kg (31 bs)		
Wind Loading - Front Facing		@90 mph / 144 kph 376 N		
		@110 mph /177 kph 562 N		
Dimension (HxWxD)	Integrated	52 x 65 x 11 cm (20.3" x 25.7" x 4.4")		
Power Consumption		70 W typical, 80 W peak		
		(up to 110 W max with AUX port PoE enabled)		
Input Voltage		58 V, 1.7 A		
Mounting		Pole mount with included brackets		
Security				
Encryption		128-bit AES and 256-bit AES		
		Note		

Specifications for 3 GHz PMP 450m Series - AP

The 3 GHz PMP 450m AP conforms to the specifications listed in below table.

Table 158: 3 GHz PMP 450m Series - AP specifications

ategory		Specification	
Model Number		3 GHz PMP 450m AP	
Spectrum			

Category		Specification	
Channel Spacing		Customizable channel selection to 50kHz raster	
Frequency Range		3300 - 3900 MHz	
Channel Bandwidth		5, 7, 10, 15, 20, 30 and 40MHz	
Interface			
MAC (Media Access Control) Layer		Cambium Networks Proprietary	
Physical Layer		8x8 Multi-User MIMO OFDM	
Ethernet Interface		100/1000BaseT, full duplex, rate auto negotiated (802.3 compliant), dual SFP support for 1 Gbps optical	
Protocols Used		IPv4, IPv6, UDP, TCP/IP, ICMP, Telnet, SNMP, HTTP, FTP	
Network Management		IPv4/IPv6 (dual stack), HTTP, HTTPS, Telnet, FTP, SNMPv2c and v3, Cambium Networks cnMaestroTM	
VLAN		802.1ad (DVLAN Q-inQ), 802.1Q with 802.1p priority, dynamic port VID	
Sensitivity			
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	3.5 GHz	1x = -97.6 dBm, 2x = -95 dBm, 4x = -88.7 dBm, 6x = -82.5 dBm, 8x = -75 dBm	
	3.6 GHz	1x = -96.9 dBm, 2x = -94.4 dBm, 4x = -88.1 dBm, 6x = -81.7 dBm, 8x = -74 dBm	
Nominal Receive Sensitivity (w/ FEC) @	3.5 GHz	1x = -96.1 dBm, 2x = -93.4 dBm, 4x = -87.1 dBm, 6x = -81.1 dBm, 8x = -74.7 dBm	
7 MHz Channel	3.6 GHz	1x = -96 dBm, 2x = -92.9 dBm, 4x = -86.6 dBm, 6x = -80.6 dBm, 8x = -73.6 dBm	
Nominal Receive Sensitivity (w/ FEC) @ 10 MHz Channel	3.5 GHz	1x = -95.2 dBm, 2x = -92.8 dBm, 4x = -86.4 dBm, 6x = -80.3 dBm, 8x = -73.2 dBm	
	3.6 GHz	1x = -94.6 dBm, 2x = -92.5 dBm, 4x = -86 dBm, 6x = -79.6 dBm, 8x = -72.8 dBm	
Nominal Receive Sensitivity (w/ FEC) @ 15 MHz Channel	3.5 GHz	1x = -93.6 dBm, 2x = -91.1 dBm, 4x = -84.6 dBm, 6x = -78.4 dBm, 8x = -71.8 dBm	
	3.6 GHz	1x = -92.8 dBm, 2x = -90.4 dBm, 4x = -84 dBm, 6x = -78 dBm, 8x = -71.1 dBm	

Category		Specification				
Nominal Receive Sensitivity (w/ FEC) @ 20 MHz Channel	3.5 GHz	1x = -92.3 dBm, 2x = -89.8 dBm, 4x = -83.4 dBm, 6x = -77.2 dBm, 8x = -70.7 dBm		-83.4 1		
	3.6 GHz	1x = -91.5 dBm, 2 6x = -76.5 dBm,	2x = -89.3 dBm, 4x = - 8x = -70 dBm	-82.9 dBm,		
Nominal Receive Sensitivity (w/ FEC) @ 30 MHz Channel	3.5 GHz	1x = -89.7 dBm, 6x = -74.8 dBm,	1x = -89.7 dBm, 2x = -87.2 dBm, 4x = -81.1 dBm, 6x = -74.8 dBm, 8x = -68.7 dBm			
	3.6 GHz	1x = -89 dBm, 2> 6x = -74.4 dBm,	x = -86.6 dBm, 4x = -8 8x = -68.1 dBm	30.7 dBm,		
Nominal Receive Sensitivity (w/ FEC) @ 40 MHz Channel	3.5 GHz	1x = -88.7 dBm, 2 dBm, 6x = -73.7	1x = -88.7 dBm, 2x = -86.3 dBm, 4x = -80.1 dBm, 6x = -73.7 dBm, 8x = -67.4 dBm			
	3.6 GHz	1x = -88 dBm, 2x 6x = -73.3 dBm,	x = -85.5 dBm, 4x = -7 8x = -66.7 dBm	'9.5 dBm,		
Performance						
Subscriber Per Sector		Up to 238				
ARQ		Yes				
Cyclic Prefix		1/16				
Frame Period		2.5 ms, 5 ms				
Modulation Levels (Adaptive)		Modulation Levels	MCS	SNR (in dB)		
		2x	QPSK	10		
		4x	16-QAM	17		
		6x	64-QAM	24		
		8x	256-QAM	32		
Latency		10 ms, typical				
Maximum Deployment Range		Up to 40 miles (64 km)				
GPS Synchronization		Yes, via Autosync (UGPS, CMM5 (GPS only, no power))				
Quality of Service	Quality of Service		Diffserv QoS			
Link Budget		,				
Antenna Beam Width (Azimuth)		90° integrated sector (3dB rolloff), 120° (6dB rolloff), (dual slant polarity, ±45°				
Antenna Beam Width (Elevation)		2° Electrical Downtilt, 8° Elevation (with Null Fill)				
Antenna Gain		+16 dBi				

Category		Specification	
Maximum EIRP		+52 dBm (or up to maxim regulation)	ium allowed by
Physical		·	
Data ports			
Main port	RJ45	1000BASE-T Ethernet Da	ita
Aux port	RJ45 SFP	100BASE-T with 802.3at PoE out; UGPS

Specifications for PMP 450i Series - AP

The PMP 450i AP conforms to the specifications listed in below table.

Table 159: PMP 450i Series - AP specifications

Category		Specification
Model Number		PMP 450i AP
Spectrum	-	
Channel Spacing		5, 7, 10, 15, 20, 30, and 40 MHz Channel Bandwidth
		Configurable on 2.5 MHz increments
Frequency Range		902 to 928 MHz
		3300 - 3900 MHz
		4900 - 5925 MHz
Channel Bandwidth	902 - 928 MHz	5, 7, 10, 15, and 20 MHz
	3300 - 3900 MHz	5, 7, 10, 15, 20, 30, and 40 MHz
	4900 - 5925 MHz	5, 10, 15, 20, 30, and 40 MHz
Interface		
MAC (Media Access Control) Layer		Cambium Proprietary
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v3
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity	1	

Category		Specification

Performance					
ARQ		Yes			
Cyclic Prefix		1/16			
Frame Period		2.5 ms or 5.0 ms			
Modulation Levels		Modulation Levels	Modulation Levels SNR (in dB		
(Adaptive)		2x	QPSK	10	
		3x	8-QAM	14	
		4x	16-QAM	17	
		5x	32-QAM	21	
		6x	64-QAM	24	
		7x	128-QAM	28	
		8x	256-QAM	32	
Latency		2.5 - 5 ms			
Maximum Deployment Range		Up to 40 miles (64	l km)		
		Up to 120 miles (190 km) for 900 MHz			

Category		Specification
GPS Synchronization		Yes, via Autosync (CMM4), via UGPS
Quality of Service	1	Diffserv QoS
Link Budget		
Antenna Beam Width	900 MHz	65° sector antenna (Dual Slant)
	3 GHz	90° sector for integrated (Dual polarity, slant +45° and - 45°)
	5 GHz	90° (3 dB roll off) sector for integrated (Dual polarity, H+V)
Antenna Gain (Does not	900 MHz	13 dBi
include cable loss, ~1dB)	3 GHz	17 dBi integrated 90° sector or external
	5 GHz	17 dBi integrated 90° sector or external
Transmit Power Range		-27 dB dynamic range (to EIRP limit by region) (1 dB step)
Maximum Transmit		+27 dBm combined output (for 5 GHz)
Power		+25 dBm combined output (for 3 GHz)
		+25 dBm combined output (for 900MHz)
Physical		
Sync/AUX port	RJ45	 10/100/100BASE-T Ethernet Data PoE output (planned for future release) Sync input or output (Connection and powering of UGPS Sync input)
Antenna Connection	1	50 ohm, N-type (Connectorized version only)
Surge Suppression		EN61000-4-5: 1.2 us/50 us, 500 V voltage waveform
EN61000-4-5		Recommended external surge suppressor: Cambium Networks Model # C000000L033A
Mean Time Between Failure		> 40 Years
Environmental		IP66, IP67
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F), 0-95% non- condensing
Weight	Connectorized	Approx. 2.0 kg (4.5 lbs)
	Integrated	Approx. 2.5 kg (5.5 lbs)

Category		Specification
Wind Survival	Connectorized	322 km/h (200 mi/h)
	Integrated	200 km/h (124 mi/h)
Dimension (HxWxD)	Connectorized	26.0 x 13.4 x 6.4 cm (10.3" x 5.3" x 3.3")
	Integrated	37.0 x 37.0 x 6.3 cm (14.5" x 14.5" x 3.2")
Power Consumption		15 W typical, 25 W max, 55 W max with Aux port PoE out enabled
Input Voltage		48-59 V DC, 802.3at compliant
Mounting		Wall or Pole mount with Cambium Networks Model # N000045L002A
Security		
Encryption		128-bit AES and 256-bit AES
		Note
		AES-256 requires a license key.

Specifications for PMP 450 MicroPoP - AP

The PMP 450 MicroPoP conforms to the specifications listed in below table.

Table 160: PMP 450 MicroPoP Series - AP specifications

Category	Specification
Model Number	PMP 450 MicroPoP AP
Spectrum	
Channel Spacing	5, 10, 15, 20, 30, and 40 MHz Channel Bandwidth
	Configurable on 2.5 MHz increments
Frequency Range	4900 - 5925 MHz
Channel Bandwidth	5, 10, 15, 20, 30, and 40 MHz
Interface	
MAC (Media Access Control) Layer	Cambium Proprietary
Physical Layer	2x2 MIMO OFDM
Ethernet Interface	10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used	IPv4, IPv6, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management	IPv4/IPv6 (dual stack), HTTP, HTTPS, Telnet, FTP, SNMPv2c and v3, Cambium Networks cnMaestro

Category		Specification
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz	900 MHz	1x = -91.9 dBm, 2x = -87.29 dBm, 3x = -83.38 dBm, 4x = -81.34 dBm, 5x = -78.41 dBm, 6x = -75.42 dBm, 7x = -72.46 dBm, 8x = - 68.58 dBm

	Connectorized	24 x 4 x 9 cm (9.5"x1.5"x3.5")		
Power Consumption		9 W typical, 12 W peak		
Input Voltage		48-59 V DC, 802.3at compatible		
Mounting		Wall or Pole mount with Cambium Networks Model # N000045L002A		
Security	•			
Encryption		128-bit AES and 256-bit AES		
		Note AES-256 requires a license key.		

Specifications for PMP/PTP 450b Retro - SM

The PMP/PTP 450b Retro conforms to the specifications listed in below table.

Table 161: PMP/PTP 450b Retro Series - SM specifications

Category		Specification		
Model Number		PMP 450b Retro SM		
Spectrum				
Channel Spacing		5, 10, 15, 20, 30, and 40 MHz Channel Bandwidth		
		Configurable on 2.5 MHz increments		
Frequency Range		4900 - 5925 MHz		
Channel Bandwidth		5, 10, 15, 20, 30, and 40 MHz		
Interface				
MAC (Media Access Control)	Layer	Cambium Proprietary		
Physical Layer		2x2 MIMO OFDM		
Ethernet Interface		10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)		
Protocols Used		IPv4, IPv6, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP		
Network Management		IPv4/IPv6 (dual stack), HTTP, HTTPS, Telnet, FTP, SNMPv2c and v3, Cambium Networks cnMaestro		
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID		
Sensitivity				
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	4.9 GHz	1x = -89.7 dBm, 2x = -84.8 dBm, 3x = -80.7 dBm, 4x = -78.4 dBm, 5x = -75.7 dBm, 6x = -72.0 dBm, 7x = -68.8 dBm, 8x = -64.2 dBm		
	5.2 GHz	1x = -92.6 dBm, 2x = -88.5 dBm, 3x = -83.4 dBm, 4x = -80.8 dBm, 5x = -77.6 dBm, 6x = -74.2 dBm, 7x = -71.6 dBm, 8x = - 67.0 dBm		
	5.4 GHz	1x = -92.6 dBm, 2x = -88.5 dBm, 3x = -84.0 dBm, 4x = -82.3 dBm, 5x = -79.0 dBm, 6x = -75.9 dBm, 7x = -72.3 dBm, 8x = -68.0 dBm		
	5.8 GHz	1x = -92.1 dBm, 2x = -87.9 dBm, 3x = -84.3 dBm, 4x = -82.1 dBm, 5x = -79.0 dBm, 6x = -75.4 dBm, 7x = -72.0 dBm, 8x = - 68.0 dBm

Specifications for PMP 450v Series - SM

The PMP 450v SM conforms to the specifications listed in below table.

Table 162: PMP 450v Series - SM specifications

Category	Specification
Model Number	PMP 450v SM
Spectrum	
Channel Spacing	5, 7, 10, 15, 20, 30, and 40 Channel Bandwidth
	Configurable on 2.5 MHz increments
Frequency Range	5.125 GHz to 7.125 GHz

Category		Specification
Channel Bandwidth	3300 - 3900 MHz	5, 7, 10, 15, 20, 30, and 40 MHz
	4900 - 5925 MHz	5, 10, 15, 20, 30, and 40 MHz
Interface		
MAC (Media Access Control) Layer		Cambium Proprietary
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		
Nominal Receive Sensitivity (w/	3.5 GHz	1x = -93.0 dBm, 2x = -89.2 dBm, 3x = -85.3 dBm, 4x = -82.9 dBm, 5x = -79.4 dBm, 6x = -76.2 dBm, 7x = -72.4 dBm, 8x = -68.5 dBm

Performance				
ARQ		Yes		
Cyclic Prefix		1/16		
Frame Period		2.5 ms or 5.0 ms		
Modulation Levels		Modulation Levels	MCS	SNR (in dB)
(Adaptive)		2x	QPSK	10
		3x	8-QAM	14
		4x	16-QAM	17
		5x	32-QAM	21
		6x	64-QAM	24
		7x	128-QAM	28
		8x	256-QAM	32
Latency		3 - 5 ms		
Maximum Deployment Range		Up to 40 miles (64 km)		
GPS Synchronization		Yes, via Autosync (CMM4)		
Quality of Service		Diffserv QoS		
Link Budget				

Category		Specification
Antenna Beam Width		10° azimuth for 23 dBi integrated antenna
Antenna Gain	5 GHz	+23 dBi H+V, integrated or external
cable loss, ~1dB)	3 GHz	+19 dBi dual slant, integrated or external
Transmit Power Range		40 dB dynamic range (to EIRP limit by region) (1 dB step)
Maximum		+27 dBm combined output (for 5 GHz)
Transmit Power		+25 dBm combined output (for 3 GHz)
Physical		-
Sync/AUX port	RJ45	10/100/1000BASE-T Ethernet Data PoE output (planned for future release) Sync input or output (Connection and powering of UGPS Sync input)
Antenna Connection		50 ohm, N-type (Connectorized version only)
Surge Suppression EN61000-4-5		EN61000-4-5: 1.2us/50us, 500 V voltage waveform
		Recommended external surge suppressor: Cambium Networks Model # C000000L033A
Mean Time Between Failure		> 40 Years
Environmental		IP66, IP67
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F), 0-95% non-condensing
Weight	Connectorized	Approx. 2.0 kg (4.5 lbs)
	Integrated	Approx. 2.5 kg (5.5 lbs)
Wind Survival	Connectorized	322 km/h (200 mi/h)
	Integrated	200 km/h (124 mi/h)
Dimension	Connectorized	26.0 x 13.4 x 6.4 cm (10.3" x 5.3" x 3.3")
(HXWXD)	Integrated	31.0 x 31.0 x 6.4 cm (12" x 12" x 2.5")
Power Consumption		15 W typical, 25 W max, 55 W max with Aux port PoE out enabled
Input Voltage		48-59 V DC, 802.3at compliant
Mounting		Wall or Pole mount with Cambium Networks Model # N000045L002A
Security		

Category	Specification	
Encryption	128-bit AES and 256-bit AES	
	\odot	Note
	\Box	AES-256 requires a license key.

Specifications for PMP 450i Series - SM

The PMP 450i SM conforms to the specifications listed in below table.

Table 163: PMP 450i Series - SM specifications

Category		Specification
Model Number		PMP 450i SM
Spectrum		-
Channel Spacing		5, 7, 10, 15, 20, 30, and 40 Channel Bandwidth
		Configurable on 2.5 MHz increments
Frequency Range		3300 - 3900 MHz
		4900 - 5925 MHz
Channel Bandwidth	3300 - 3900 MHz	5, 7, 10, 15, 20, 30, and 40 MHz
	4900 - 5925 MHz	5, 10, 15, 20, 30, and 40 MHz
Interface		·
MAC (Media Access Control) Layer		Cambium Proprietary
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		·

Performance		
ARQ		Yes
Cyclic Prefix		1/16
Frame Period		2.5 ms or 5.0 ms

Category		Specification		
Modulation Levels (Adaptive)		Modulation Levels	MCS	SNR (in dB)
		2x	QPSK	10
		3x	8-QAM	14
		4x	16-QAM	17
		5x	32-QAM	21
		6x	64-QAM	24
		7x	128-QAM	28
		8x	256-QAM	32
Latency		3 - 5 ms		
Maximum Deployment Range		Up to 40 miles (64 km)		
GPS Synchronization		Yes, via Autosync (CMM4)		
Quality of Service		Diffserv QoS		
Link Budget				
Antenna Beam Width		10° azimuth for 23 dBi integrated antenna		
Antenna Gain (Does not include cable loss, ~1dB)	5 GHz	+23 dBi H+V, integrated or (external	
	3 GHz	+19 dBi dual slant, integrated or external		
Transmit Power Range		40 dB dynamic range (to EIRP limit by region) (1 dB step)		
Maximum		+27 dBm combined output (for 5 GHz)		
Transmit Power		+25 dBm combined output (for 3 GHz)		
Physical				
Sync/AUX port	RJ45	10/100/1000BASE-T Ethernet Data PoE output (planned for future release) Sync input or output (Connection and powering of UGPS Sync input)		
Antenna Connection		50 ohm, N-type (Connectorized version only)		
Surge Suppression EN61000-4-5		EN61000-4-5: 1.2us/50us, 500 V voltage waveform Recommended external surge suppressor: Cambium Networks Model # C000000L033A		

Category		Specification	
Mean Time Between Failure		> 40 Years	
Environmental		IP66, IP67	
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F), 0-95% non-condensing	
Weight	Connectorized	Approx. 2.0 kg (4.5 lbs)	
	Integrated	Approx. 2.5 kg (5.5 lbs)	
Wind Survival	Connectorized	322 km/h (200 mi/h)	
	Integrated	200 km/h (124 mi/h)	
Dimension	Connectorized	26.0 x 13.4 x 6.4 cm (10.3" x 5.3" x 3.3")	
(HxWxD)	Integrated	31.0 x 31.0 x 6.4 cm (12" x 12" x 2.5")	
Power Consumption		15 W typical, 25 W max, 55 W max with Aux port PoE out enabled	
Input Voltage		48-59 V DC, 802.3at compliant	
Mounting		Wall or Pole mount with Cambium Networks Model # N000045L002A	
Security			
Encryption		128-bit AES and 256-bit AES	
		Note AES-256 requires a license key.	

Specifications for PTP 450i Series - BH

The PTP 450i BH conforms to the specifications listed in below table.

Table 164: PTP 450i Series - BH specifications

Category		Specification
Model Number		РТР 450і ВН
Spectrum		
Channel Spacing		5, 7, 10, 15, 20, 30, and 40 MHz Channel Bandwidth
		Configurable on 2.5 MHz increments
Frequency Range		4900 - 5925 MHz
Channel Bandwidth	4900 - 5925 MHz	5, 10, 15, 20, 30, and 40 MHz

Category		Specification
Interface		
MAC (Media Access Control) Layer		Cambium Proprietary
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	3.5 GHz	1x = -93.0 dBm, 2x = -89.3 dBm, 3x = -85.0 dBm, 4x = -82.2 dBm, 5x = -79.2 dBm, 6x = -76.3 dBm, 7x = -72.6 dBm, 8x = -69.1 dBm
	3.6 GHz	1x = -93.0 dBm, 2x = -88.1 dBm, 3x = -84.0 dBm, 4x = -82.3 dBm, 5x = -78.8 dBm, 6x = -75.9 dBm, 7x = -72.1 dBm, 8x = -68.6 dBm
	4.9 GHz	1x = -92.6 dBm, 2x = -88.3 dBm, 3x = -84.0 dBm, 4x = -81.6 dBm, 5x = -78.4 dBm, 6x = -75.4 dBm, 7x = -72.3 dBm, 8x = -68.0 dBm
	5.1 GHz	1x = -93.0 dBm, 2x = -88.5 dBm, 3x = -84.3 dBm, 4x = - 82.0 dBm, 5x = -78.3 dBm, 6x = -75.1 dBm, 7x = -72.4 dBm, 8x = -68.0 dBm
	5.2 GHz	1x = -93.0 dBm, 2x = -88.5 dBm, 3x = -84.3 dBm, 4x = - 82.0 dBm, 5x = -78.3 dBm, 6x = -75.1 dBm, 7x = -72.4 dBm, 8x = -68.0 dBm
	5.4 GHz	1x = -93.0 dBm, 2x = -88.6 dBm, 3x = -84.2 dBm, 4x = -81.3 dBm, 5x = -78.8 dBm, 6x = -75.0 dBm, 7x = -72.2 dBm, 8x = -68.0 dBm

Input Voltage	48-59 V DC, 802.3at compliant		
Mounting	Wall or Pole mount with Cambium Networks Model #N000045L002A		
Security	-		
Encryption	128-bit AES and 256-bit AES		
	Note AES-256 requires a license key.		

Specifications for PMP 450b 5 GHz Mid-Gain Series - SM

The PMP 450b 5 GHz Mid-Gain conforms to the specifications listed in below table.

Table 165: PMP 450b 5 GHz Mid-Gain Series - SM specifications

Category	Specification		
Model Number	5 GHz PMP 450b Mid-Gain		
Spectrum			
Channel Spacing	Configurable in 2.5 MHz increments		
Frequency Range	4900 - 5925 MHz		
Channel Bandwidth	5, 10, 15, 20, 30, and 40 MHz		
Interface			
MAC (Media Access Control) Layer	Cambium Proprietary		
Physical Layer	2x2 MIMO OFDM		
Ethernet Interface	100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)		
Protocols Used	IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP		
Network Management	HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3		
VLAN	802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID		
Sensitivity			

Category		Specification	
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	4.9 GHz	1x = -92.0 dBm, 2x = -88.0 dBm, 3x = -84.0 dBm, 4x = -82.0 dBm, 5x = -78.0 dBm, 6x = -75.1 dBm, 7x = -72.5 dBm, 8x = - 68.0 dBm	
	5.1 GHz	1x = -92.6 dBm, 2x = -88.5 dBm, 3x = -82.6 dBm, 4x = -80.8 dBm, 5x = -77.6 dBm, 6x = -74.2 dBm, 7x = -71.6 dBm, 8x = - 66.8 dBm	
	5.2 GHz	1x = -92.6 dBm, 2x = -88.5 dBm, 3x = -83.4 dBm, 4x = -80.8 dBm, 5x = -77.6 dBm, 6x = -74.2 dBm, 7x = -71.6 dBm, 8x = - 67.0 dBm

		Sync input o UGPS Sync ii	nput)	and powering or
Antenna Connection		50 ohm, N-type (Co	onnectorized version	only)
Surge Suppression	rge Suppression EN61000-4-5: 10us/700us, Level 4, 4kV volt		voltage waveform	
EN61000-4-5		Recommended surg Model # C0000001	ge suppressor: Camb _065A	bium Networks
Mean Time Between Failure		> 40 Years		
Environmental		IP55		
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F), 0-95% non-condensing		

Category		Specification		
Weight	Integrated	Approx. 0.5 kg (1.1 lb. including mounting bracket)		
Wind Survival	Integrated	190 km/h (118 mi/h)		
Dimension (HxWxD)	Integrated	12.4 x 25.1 x 11.9 cm (4.9" x 9.9" x 4.7")		
Power Consumption		9 W nominal, 12 W peak		
Input Voltage		20 - 32 V DC,		
Mounting		Wall or Pole mount		
Security				
Encryption		128-bit AES and 256-bit AES		
		Note AES-256 requires a license key.		

Specifications for PMP 450b 5 GHz High Gain Series - SM

The PMP 450b High Gain SM conforms to the specifications listed in below table.

Table 166: PMP 450b High Gain Series - SM specifications

Category	Specification	
Model Number	PMP 450b High Gain SM	
Spectrum		
Channel Spacing	Configurable in 2.5 MHz increments	
Frequency Range	4900 - 5925 MHz	
Channel Bandwidth	5, 10, 15, 20, 30, and 40 MHz	
Interface		
MAC (Media Access Control) Layer	Cambium Proprietary	
Physical Layer	2x2 MIMO OFDM	
Ethernet Interface	100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)	
Protocols Used	IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP	
Network Management	HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3	
VLAN	802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID	

Category		Specification

Antenna Gain	5 GHz	+23 dBi H+V, integrated			
Transmit Power Range		22 dB dynamic range (to EIRP limit by region) (1 dB step)			
Maximum Transmit Power		+27 dBm combined output (+22 dBm @ 256QAM)			
Physical					
Sync/AUX port	RJ45	 100/1000BASE-T Ethernet Data PoE output (planned for future release) Sync input or output (Connection and powering of UGPS Sync input) 			
Antenna Connection		50 ohm, N-type (Connectorized version only)			
Surge Suppression		EN61000-4-5: 10us/700us, L	evel 4, 4kV volt	age waveform	
EN61000-4-5		Recommended surge suppressor: Cambium Networks Model # C000000L065A			
Mean Time Between Failure		> 40 Years			
Environmental		IP67			

Category		Specification		
Temperature / Humidity		-40°C to +60°C (-40°F to +140°F), 0-95% non-condensing		
Weight	Integrated	Approx. 3.1 kg (7 lb. including mounting bracket)		
Wind Survival	Integrated	145 km/h (90 mi/h)		
Dimension (HxWxD)	Integrated	47 cm diameter x 28 cm (18.5" diameter x 11.2")		
Power Consumption		9 W nominal, 12 W peak		
Input Voltage		20 - 32 V DC,		
Mounting		Wall or Pole mount		
Security				
Encryption		128-bit AES and 256-bit AES		
		Note AES-256 requires a license key.		

Specifications for PMP/PTP 450b 3 GHz High Gain Series - SM/BHS

The PMP/PTP 450b 3 GHz High Gain - SM/BHS conforms to the specifications listed in below table.

Table 167: PMP/PTP 450b 3 GHz High Gain Series specifications

Category	Specification
Model Number	PMP/PTP 450b 3 GHz High Gain - SM/BHS
Spectrum	
Channel Spacing	Customizable channel selection to 50 kHz raster
Frequency Range	3300 - 3900 MHz
Channel Bandwidth	5, 7, 10, 15, 20, 30, and 40 MHz
Interface	
MAC (Media Access Control) Layer	Cambium Networks Proprietary
Physical Layer	2x2 MIMO OFDM
Ethernet Interface	100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used	IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management	HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3

Category		Specification	
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID	
Sensitivity			
Nominal Receive Sensitivity (w/ FEC)	3.5 GHz	1x = -93.0 dBm, 2x = -90.1 dBm, 3x = -86.2 dBm, 4x = -83.8 dBm, 5x = -80.3 dBm, 6x = -77.6 dBm, 7x = -73.9 dBm, 8x = -70.1 dBm	
@ 5 MHz Channel	3.6 GHz	1x = -93.0 dBm, 2x = -89.7 dBm, 3x = -85.6 dBm, 4x = -83.0 dBm, 5x = -80.0 dBm, 6x = -76.8 dBm, 7x = -73.0 dBm, 8x = -69.9 dBm	
Nominal Receive Sensitivity (w/ FEC)	3.5 GHz	1x = -92.0 dBm, 2x = -88.2 dBm, 3x = -84.5 dBm, 4x = -82.2 dBm, 5x = -79.4 dBm, 6x = -76.0 dBm, 7x = -73.0 dBm, 8x = -68.4 dBm	
@ / MHz Channel	3.6 GHz	1x = -92.0 dBm, 2x = -87.9 dBm, 3x = -83.6 dBm, 4x = -81.4 dBm, 5x = -78.2 dBm, 6x = -75.4 dBm, 7x = -71.6 dBm, 8x = -67.8 dBm	
Nominal Receive Sensitivity (w/ FEC)	3.5 GHz	1x = -91.0 dBm, 2x = -87.0 dBm, 3x = -83.0 dBm, 4x = -80.4 dBm, 5x = -77.6 dBm, 6x = -74.4 dBm, 7x = -71.2 dBm, 8x = -67.4 dBm	
@ 10 MHz Channel	3.6 GHz	1x = -90.0 dBm, 2x = -86.0 dBm, 3x = -82.1 dBm, 4x = -80.0 dBm, 5x = -77.0 dBm, 6x = -74.0 dBm, 7x = -70.8 dBm, 8x = -66.7 dBm	
Nominal Receive Sensitivity (w/ FEC)	3.5 GHz	1x = -89.0 dBm, 2x = -85.1 dBm, 3x = -81.0 dBm, 4x = -79.0 dBm, 5x = -75.6 dBm, 6x = -72.7 dBm, 7x = -69.4 dBm, 8x = -65.9 dBm	
@ 15 MHz Channel	3.6 GHz	1x = -89.0 dBm, 2x = -84.9 dBm, 3x = -80.2 dBm, 4x = -78.1 dBm, 5x = -75.0 dBm, 6x = -71.9 dBm, 7x = -69.0 dBm, 8x = -64.9 dBm	
Nominal Receive Sensitivity (w/ FEC) @ 20 MHz Channel	3.5 GHz	1x = -88.0 dBm, 2x = -84.0 dBm, 3x = -80.0 dBm, 4x = -77.8 dBm, 5x = -74.6 dBm, 6x = -71.6 dBm, 7x = -68.5 dBm, 8x = -64.5 dBm

Specifications for PMP 450 Series - AP

The PMP 450 AP conforms to the specifications listed in below table.

Table 168: PMP 450 Series - AP specifications

Category		Specification
Model Number		PMP 450 AP
Spectrum		
Channel Spacing		5, 7, 10, 15, 20 and 30 MHz Channel Bandwidth
		Configurable on 2.5 MHz increments
Frequency Range	2.4 GHz	2400 - 2483.5 MHz
	3.5 GHz	3300 – 3600 MHz
	3.65 GHz	3500 – 3850 MHz
	5 GHz	5470 – 5875 MHz
Channel Bandwidth	3.5 and 3.65 GHz	5, 7, 10, 15, 20 and 30 MHz
	2.4 and 5 GHz	5, 10, 15, 20 and 30 MHz
OFDM Subcarriers		512 FFT
Interface		
MAC (Media Access Control) Layer		Cambium Proprietary

Category		Specification
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100/1000BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP, TFTP, RADIUS
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v3, TFTP, Syslog
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	900 GHz	1x = -91.9 dBm, 2x = -87.29 dBm, 3x = -83.38 dBm, 4x = - 81.34 dBm, 5x = -78.41 dBm, 6x = -75.42 dBm, 7x = - 72.46 dBm, 8x = -68.58 dBm

Specifications for PMP 450 Series - SM

The PMP 450 SM conforms to the specifications listed in below table.

Table 169: PMP 450 Series - SM specifications

Category		Specification
Model Number		PMP 450 SM
Spectrum	•	
Channel Spacing		5, 7, 10, 15, 20, 30, and 40 MHz Channel Bandwidth
		Configurable on 2.5 MHz increments
Frequency Range	900 MHz	902 - 928 MHz
	2.4 GHz	2400 - 2483.5 MHz
	3.5 GHz	3300 - 3600 MHz
	3.65 GHz	3500 - 3850 MHz
	5 GHz	5470 – 5875 MHz
Channel	900 MHz,	5, 7, 10, 15, and 20 MHz
Bandwidth 2.4 GHz, 3.5 GHz, 3.65 GHz and 5 GHz		5, 10, 15, 20, 30, and 40 MHz Note: 2.4 GHz band does not support 40 MHz.
OFDM Subcarriers		512 FFT
Interface	•	
MAC (Media Access Layer	Control)	Cambium Proprietary
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100 BaseT, half/full duplex, rate auto negotiated (802.3 compliant)
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v3
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		·

Category		Specification	
Nominal Receive Sensitivity (w/ FEC) @ 5 MHz Channel	900 MHz	1x = -93.66 dBm, 2x = -89.6 dBm, 3x = -85.65 dBm, 4x = -83.58 dBm, 5x = -80.65 dBm, 6x = -77.59 dBm, 7x = -74.24 dBm, 8x = -70.59 dBm

Performance		
Subscribers Per Sector		Up to 238

Category		Specification			
ARQ		Yes			
Cyclic Prefix		1/16			
Frame Period		2.5 ms or 5.0 ms			
Modulation Levels		Modulation Levels		SNR (in dB)	
(Adaptive)		2x	QPSK	10	
		3x	8QAM	14	
		4x	16QAM	17	
		5x	32QAM	21	
		6x	64QAM	24	
		7x	128QAM	28	
		8x	256QAM	32	
Latency		 3 - 5 ms for 2.5 ms Fra 6-10 ms for 5.0 ms Fra 	me Period ame Period		
Maximum Deployme	ent Range	Up to 40 miles (64 km)			
GPS Synchronization		Yes			
Quality of Service		Diffserv QoS			
Link Budget					
Antenna Gain (Does not include cable loss, ~1dB)	900 MHz	12 dBi Yagi antenna			
	2.4 GHz	7 dBi Dual Slant, integrated p	batch		
	3.5 GHz	8 dBi Dual Slant, integrated patch			
		19 dBi Flat Plate, integrated patch			
	3.65 GHz	8 dBi Dual Slant, integrated patch			
		19 dBi Flat Plate, integrated patch			
	5 GHz	9 dBi H+V, integrate d patch	1		
		25 dBi H+V, integrated dish			
Combined Transmit Power		-30 to +22 dBm (to EIRP limit by region) – 2.4, 5 GHz			
		-30 to +25 dBm (to EIRP limit by region) – 3.5, 3.6 GHz			
		25 dBm - 3 GHz			
Maximum Transmit Power		 22 dBm combined OFDM (2.4 GHz, 5 GHz) (dependent upon Region Code setting) 25 dBm combined OFDM (900 MHz, 3.5 GHz, 3.6 GHz), 			

Category		Specification
		(dependent upon Region Code setting)
Reflector antenna	2.4 GHz	+12 dBi
gain	3.5 GHz	+11 dBi
	3.65 GHz	+11 dBi
	5 GHz	+15 dBi
Other antenna (5	CLIP Gain	+8 dBi
GHz only)	LENS Gain	+5.5 dBi
Physical		
Wind Survival		200 mph (322 kph)
Antenna Connection		50 ohm, N-type (Connectorized version only)
Surge Suppression		EN61000-4-5: 10us/700us, Level 4, 4kV voltage waveform
EN61000-4-5		Recommended surge suppressor: Cambium Networks Model # 600SSH
Environmental		IP55
Temperature /		-40°C to +60°C (-40°F to +140°F) /
Humidity		0-95% non-condensing
Weight	2.4 GHz	15 kg (33 lbs) with antenna
		2.5 kg (5.5 lbs) without antenna
	3.5 GHz	15 kg (33 lbs) with antenna
		2.5 kg (5.5 lbs) without antenna
		2.5 kg (5.5 lbs) for 450 ruggedized
	3.6 GHz	15 kg (33 lbs) with antenna
		2.5 kg (5.5 lbs) without antenna
		2.5 kg (5.5 lbs) for 450 ruggedized
	5 GHz	5.9 kg (13 lbs) with antenna
		2.5 kg (5.5 lbs) without antenna
		3.5 kg (7.7 lbs) for 450d
Dimensions (H x W	x D)	30 x 9 x 9 cm (11.75" x 3.4" x 3.4")
		50 x 50 x 38 cm (19.69" x 19.69" x 14.96") for 450d
		31.0 x 31.0 x 6.4 cm (12" x 12" x 2.5") for 450 ruggedized

Category	Specificatio	n	
Power Consumption	12 W		
Input Voltage	20 to 32 VDC		
Security			
Encryption	128-bit AES and 256-bit AES Note AES 256 requires a license key		
	\rightarrow	AES-250 requires a license key.	

Specifications for PTP 450 Series - BH

The PTP 450 BH conforms to the specifications listed in below table.

Table 170: PTP 450 Series - BH specifications

Category		Specification
Model Number		PTP 450 BH
Spectrum		
Channel Spacing		5, 7, 10, 15, 20, 30, and 40 MHz Channel Bandwidth
		Configurable on 2.5 MHz increments
Frequency Range		902 to 928 MHz
		3300 - 3600 MHz
		3500 - 3850 MHz
		5470 - 5875 MHz
Channel Bandwidth	900 MHz	5, 7, 10, 15, and 20 MHz
	3.5 GHz, 3.6 GHz, and 5 GHz	5, 7, 10, 15, 20, 30 , and 40 MHz
		7 MHz Channel bandwidth configurable for 3.5 GHz and 3.65 GHz band only.
OFDM Subcarriers		512 FFT
Interface		
MAC (Media Access Control) Layer		Cambium Proprietary
Physical Layer		2x2 MIMO OFDM
Ethernet Interface		10/100 BaseT, half/full duplex, rate auto negotiated (802.3 compliant)

Category		Specification
Protocols Used		IPv4, UDP, TCP, IP, ICMP, Telnet, SNMP, HTTP, FTP, TFTP, RADIUS
Network Management		HTTP, HTTPS, Telnet, FTP, SNMP v2c and v3, TFTP, Syslog
VLAN		802.1ad (DVLAN Q-in-Q), 802.1Q with 802.1p priority, dynamic port VID
Sensitivity		
Nominal Receive Sensitivity (w/ FEC) @	900 MHz	1x = -94.0 dBm, 2x = -90.7 dBm, 3x = -85.6 dBm, 4x = -83.8 dBm, 5x = -80.6 dBm, 6x = -77.5 dBm, 7x = -73.8 dBm, 8x = -69.8 dBm
5 MHz Channel	3.5 GHz	1x = -94.0 dBm, 2x = -89.6 dBm, 3x = -85.4 dBm, 4x = -83.0 dBm, 5x = -80.0 dBm, 6x = -76.5 dBm, 7x = -72.3 dBm, 8x = -68.2 dBm
	3.6 GHz	1x = -94.0 dBm, 2x = -90.0 dBm, 3x = -85.0 dBm, 4x = -82.7 dBm, 5x = -79.6 dBm, 6x = -75.0 dBm, 7x = -71.9 dBm, 8x = -66.7 dBm
	5.4 GHz	1x = -90.9 dBm, 2x = -86.8 dBm, 3x = -83.7 dBm, 4x = -80.8 dBm, 5x = -78.0 dBm, 6x = -74.8 dBm, 7x = -70.0 dBm, 8x = -66.0 dBm
	5.8 GHz	1x = -91.5 dBm, 2x = -87.0 dBm, 3x = -83.0 dBm, 4x = -81.0 dBm, 5x = -77.8 dBm, 6x = -74.0 dBm, 7x = -70.0 dBm, 8x = -66.4 dBm
Nominal Receive Sensitivity (w/ FEC) @7 MHz Channel	900 MHz	1x = -92.4 dBm, 2x = -88.3 dBm, 3x = -83.9 dBm, 4x = -81.8 dBm, 5x = -78.9 dBm, 6x = -75.9 dBm, 7x = -72.9 dBm, 8x = -68.9 dBm

PSU specifications

The PMP/PTP 450i AC+DC Enhanced Power Injector conforms to the specifications listed in below table.

Table 171: PMP/PTP 450i AC power Injector specifications

Category	Specification
Dimensions	137 mm (5.4 in) x 56 mm (2.2 in) x 38 mm (1.5 in)
Weight	0.240 Kg (0.5 lbs)
Temperature	-40°C to +60°C
Humidity	90% non-condensing
Waterproofing	Not waterproof
Altitude	Sea level to 5000 meters (16000 ft)
AC Input	Min 90 V AC, 57 - 63 Hz, max 264 V AC, 47 - 53 Hz.
DC output voltage to the ODU	58V +2V/- 0V
AC connector	IEC-320-C8
Efficiency	Better than 85%, efficiency level 'VI'
Over Current Protection	Hiccup current limiting, trip point set between 120% to 150% of full load current
Hold up time	At least 10 milliseconds

Warning

Use the above PSU to only power up 450i and 450m products.

The PMP/PTP 450 power supply conforms to the specifications listed in below table.

Table 172: PMP/PTP 450 power supply specifications (part number: N000900L001A)

Category	Specification
Dimensions	118 mm (4.66 in) x 45 mm (1.75 in) x 32 mm (1.25 in)
Weight	0.240 Kg (0.5 lbs)
Temperature	0°C to +40°C
Humidity	20 to 90%
AC Input	90-264 VAC, 47 - 63 Hz, 0.5 A rms at 120 VAC, 0.25 A rms at 240 VAC.
DC output voltage to the ODU	30 V ± 5%
AC connector	IEC-320-C8
Efficiency	Better than 85%, efficiency level 'V'

Category	Specification
Over Current Protection	Short circuit, with auto recovery; Should restart between every 0.5 to 2 sec.
Hold up time	10mS min at max load, 120VAC

Note

The 30bV PSU (part number: #N000900L001A) has to be used for PMP 450 900 MHz SM.

Warning

The PMP 450 Ruggedized High Gain Integrated Subscriber Module (Cambium part numbers C035045C014A and C036045C014A), while encapsulated in a 450i-type enclosure, contains 450 circuitry which must be powered via 30VDC. Powering these SMs with 56 VDC will damage the device.

Data network specifications

This section contains specifications of the PMP/PTP 450 platform Ethernet interface.

Ethernet interface

450m/450i Series

The 450m/450i Series Ethernet port conforms to the specifications listed in below table.

Table 173: 450m/450i Series Main and Aux Ethernet bridging specifications

Ethernet Bridging	Specification
Protocol	IEEE 802.3 compatible
QoS	IEEE 802.1p, IEEE 802.1Q, IEEE 802.1ad, DSCP IPv4
Main Ethernet port	10/100/1000 BaseT, half/full duplex, rate auto negotiated
Aux Ethernet port	10/100 BaseT, half/full duplex, rate auto negotiated
Maximum Ethernet Frame Size	1700 Bytes

450/450b Series

Table 174: 450 Series Ethernet bridging specifications

Ethernet Bridging	Specification	
Protocol	IEEE 802.3 compatible	
QoS	IEEE 802.1p, IEEE 802.1Q, IEEE 802.1ad, DSCP IPv4	

Ethernet Bridging	Specification
Interface	10/100/1000* BaseT, half/full duplex, rate auto negotiated
Maximum Ethernet Frame Size	1700 Bytes
* 450 SM does not support 1000 BaseT.	

* 450 AP supports 1000 BaseT, but with known CRC errors and it is not recommended to use.

Note

Practical Ethernet rates depend on network configuration, higher layer protocols and platforms used.

Over the air throughput is restricted to the rate of the Ethernet interface at the receiving end of the link.

Wireless specifications

This section contains specifications of the 450 Platform Family wireless interface. These specifications include RF bands, channel bandwidth, spectrum settings, maximum power and link loss.

General wireless specifications

The wireless specifications that apply to all 450 Platform variants are listed under below table.

Table 175: 450 Platform Family - wireless specifications

Item	Specification
Channel selection	Manual selection (fixed frequency).
Manual power control	To avoid interference to other users of the band, maximum power can be set lower than the default power limit.
Duplex scheme	Adaptive TDD

Item	Specification				
Range	Band	Platform	Range		
	900 MHz	PMP 450i Series - AP and	120 mi / 193 km		
		PMP 450 Series - SM			
	2.4 GHz	PMP 450 Series	40 mi / 64 km		
	3.5 GHz	PMP/PTP 450/450b Series	40 mi / 64 km (PMP)		
			186 mi/ 299 km (PTP)		
	3.65 GHz	PMP/PTP 450/450b Series	40 mi / 64 km (PMP)		
			186 mi/ 299 km (PTP)		
	5 GHz	PMP/PTP 450/450i/450b	40 mi / 64 km (PMP)		
		Series and	186 mi/ 299 km (PTP)		
	PMP 450m Series AP				
Over-the-air encryption	128-bit AES and 256-bit AES				
Error Correction	Rate 3/4 RS coder				

Link Range and Throughput

Link range and throughput estimates are based on site-specific attributes and configuration parameters. For the most up-to-date information on link range and throughput for your equipment see the Capacity Planner and LINKPlanner software tools:

- For average-deployment link range and throughput planning information, see:
 - https://support.cambiumnetworks.com/files/capacityplanner/
- For site-specific link range and throughput planning information, see:
 - https://support.cambiumnetworks.com/files/linkplanner

Country specific radio regulations

This section describes how the 450 Platform Family complies with the radio regulations that are enforced in various countries.

Caution

Changes or modifications not expressly approved by Cambium could void the user's authority to operate the system.

Type approvals

This system has achieved Type Approval in various countries around the world. This means that the system has been tested against various local technical regulations and found to comply. The frequency bands in which the system operates may be 'unlicensed' and, in these bands, the system can be used provided it does not cause interference. The system is not guaranteed protection against interference from other ODUs and installations.

The radio specification type approvals that have been granted for 450 Platform frequency variants are listed in below table.

Table 176: Radio certifications

Variant	Region	Specification (Type Approvals)	
900 MHz PMP 450i	Canada	RSS Gen and RSS 210

DFS for 2.4 and 5 GHz Radios

Dynamic Frequency Selection (DFS) is a requirement in several countries and regions for 2.4 and 5 GHz unlicensed systems to detect radar systems and avoid co-channel operation.

The details of DFS operation and channels available for each Country Code, including whether DFS is active on the AP, SM, which DFS regulation apply, and any channel restrictions are shown in below table.

Table 177: Country & Bands DFS setting

(*) = No limit

(X) = Not allowed

CPL= Conducted Power Limit

- 1. = Frequencies between 3850 and 3900 can also be selected, but performance is not guaranteed in this portion of the band. For example, sensitivity is degraded
- 2. = No PTP support in ETSi region
- 3. = Either ETSI or FCCC
- 4. = This band follows the CBRS rules (devices need to connect to a SAS to be granted a channel)
- 5. The lack of power limits applies only to Category C ETSI countries. ETSI Categories A and B have limits that are captured in Table 203.

Maximum transmit power 4.9 GHz band

Note

For releases 16.0 and later, although sector transmission mode EIRP is limited to 42 dBm, ROW GUI configuration limit allows a setting of up to 48 dBm. This allows the software to transmit as high as 48 dBm for ROW regions, depending on the modulation mode and transmission mode in use. For a detailed explanation, see the Release 16.0 training slides available at:

https://learning.cambiumnetworks.com/learn/course/121/PMP450SoftwareRelease16

Maximum transmit power 5.2 GHz band

Note

The selection of 5 MHz channel is not available for the PMP 450 AP and the PTP 450 BHM. It is available for the PMP/PTP 450i AP/SM and the PMP 450m AP.

5.4 GHz	25 dBm	16 dBm	12 dBm	EIRP - Antenna Gain	25 dBm	16 dBm	12 dBm	EIRP - Antenna Gain
5.8 GHz	32 dBm	23 dBm	19 dBm	EIRP - Antenna Gain	31 dBm	22 dBm	18 dBm	EIRP - Antenna Gain

Note

For releases 16.0 and later, although sector transmission mode EIRP is limited to 42 dBm, ROW GUI configuration limit allows a setting of up to 48 dBm. This allows the software to transmit as high as 48 dBm for ROW regions, depending on the modulation mode and transmission mode in use. For a detailed explanation, see the Release 16.0 training slides available at:

https://learning.cambiumnetworks.com/learn/course/121/PMP450SoftwareRelease16

Table 203: Power and EIRP Limits to meet EU requirements

Product	450b				450m	
State Category	А		В		A and B	
Baseline power limit	-59 dBm/MHz/antenna		-50 dBm/MHz/antenna		-52 dBm/MHz/sector	
Channel Bandwidth	20 MHz	40 MHz	20 MHz	40 MHz	20 MHz	40 MHz
Band Edge Center Frequency	3420 MHz	3430 MHz	3420 MHz	3430 MHz	3420 MHz	3430 MHz
Max Tx power (combined) at Band Edge Frequency	7 dBm	-13 dBm	17 dBm	-1 dBm		
Max EIRP at Band Edge Frequency					38 dBm	37 dBm
Lowest center frequency at full power	3466 MHz	3542 MHz	3449 MHz	3491 MHz	3445 MHz	3475 MHz
Full power	Tx power = 27 dBm			EIRP = 52 dBm		

Note

- The baseline power requirement is the maximum power spectral density the out-ofband transmission can be.
- Each European country falls into one of these categories: A, B, or C. Category C does not have additional restrictions for emissions below or above the band, but Categories A and B do. The operator needs to apply the right limit to the device according to the country the device is deployed in.

For example, an operator in a Category A country using a 450m AP with 450b SMs, 20MHz bandwidth, and operating at center frequency 3420 needs to enable their Max Tx Power setting on every 450b via radio GUI or SNMP, then set that limit to 7 dBm. Additionally, the EIRP setting on the 450m AP must be configured to 38 dBm or lower.

• For center frequencies below the lowest center frequency at max power and other channel bandwidths, the user can interpolate the values in the table.

For example, an operator in a Category B country using a 450m AP with 450b SMs, 20 MHz bandwidth, and operating at a center frequency 3440 needs to enable the Max Tx Power setting on every 450b via radio GUI or SNMP, then set that limit to 17+ (27-17)/(3449-3420)*(3440-3420) = 24 dBm. Additionally, the EIRP setting on the PMP 450m AP must be configured to 38+(52-38)/(3445-3420)* (3440-3420) = 49 dBm or lower.

		40 MHz	5170	5230	48

Table 211: Frequency range per country – 5.1 GHz band PMP 450m Series

¹ Frequencies 5152.5 and 5247.5 are supported by the PMP 450m AP, but not by the PMP 450i SM. As this is the only SM the AP can communicate with in this band, these frequencies should not be available at the AP until there is an SM that supports them as well.

 2 The regulatory EIRP limit is 37 dBm, but the hardware supports up to 36 dBm.

³ The regulatory EIRP limit is 39 dBm, but the hardware supports up to 36 dBm.

⁴ The split EIRP limits are currently applied to all FCC regions. They are needed for US and Canada.

Note that center frequencies from 5165 to 5175 are not supported by the SM, and therefore are not allowed in the 450m SW.

 5 Note that center frequencies from 5170 to 5177.5 are not supported by the SM, and therefore are not allowed in the 450m SW.

However, the 450m has a grant for these frequencies, and could be enabled in the future if any SM supports them.

 6 This EIRP value is the limit of the parameter configured in the PMP 450m GUI. Note that not all operating modes achieve the same EIRP.

The limits are as follows:

Sector mode	42 dBm
Beamforming mode QPSK	48 dBm
Beamforming mode 16-QAM	48 dBm
Beamforming mode 64-QAM	46 dBm
Beamforming mode 256-QAM	44 dBm
MU-MIMO mode	44 dBm

Frequency range 5.2 GHz band

		40 MHz	5270	5330	48

Table 215: Frequency range per country - 5.2 GHz band PMP 450m Series

¹ Frequencies 5345 and 5347.5 are supported by the PMP 450m AP, but not by the PMP 450i SM. As this is the only SM the AP can communicate with in this band, these frequencies should not be available at the AP until there is an SM that supports them as well.

 2 PMP 450m is certified for up to 29 dBm, but the regulatory limit is 28.7 dBm, and the GUI only allows integer inputs.

³ Frequency above 5332.5 are not supported by the PMP 450i SM. As this is the only SM available in this band, the PMP 450m AP should also not offer these frequencies until there is an SM able to support them.

⁴ Max frequency supported by 450i SM is 5325 MHz. This is also the SW limit for 450m until there is an SM that supports the additional frequencies.

⁵ This EIRP value is the limit of the parameter configured in the PMP 450m GUI. Note that not all operating modes achieve the same EIRP.

The limits are as follows:

Sector mode	42 dBm
Beamforming mode QPSK	48 dBm
Beamforming mode 16-QAM	48 dBm

Beamforming mode 64-QAM	46 dBm
Beamforming mode 256-QAM	44 dBm
MU-MIMO mode	44 dBm

		40 MHz	5490	5580
			5670	5705

¹ Beyond highest full power channel. SW does not reduce max power.

² Center frequency 5487.5 is the lowest allowed at full power

³ Center frequency 5477.5 is the lowest allowed at full power. Maximum power for edge frequency is 7 dBm. PMP 450 SM supports down to 5472.5

⁴ PMP 450 SM supports up to 5722.5

⁵ Center frequency 5477.5 is the lowest allowed at full power. Maximum power for edge frequency is 12.1 dBm. PMP 450 SM supports down to 5475

⁶ PMP 450 SM supports up to 5720

⁷ 5 MHz channel not available in DFS regions for PMP 450b.

⁸ Center frequency 5495 is the lowest allowed at full power. Maximum power for edge frequency is 16.5 dBm

⁹ Center frequency 5495 is the lowest allowed at full power. Maximum power for edge frequency is 22.8 dBm.

¹⁰ Center frequency 5507.5 is the lowest allowed at full power. Maximum power for edge frequency is 22.4 dBm

¹¹ PMP 450 AP needs the 5600-5650 MHz exclusion, as it was never re-certified with the new rules.

All other products do not need this notch.

Table 220: Frequency range per country – 5.4 GHz band PMP 450m Series

¹ PMP 450m is certified for up to 29 dBm, but the regulatory limit is 28.7 dBm, and the GUI only allows integer inputs.

 2 5472.5 can be used only with PMP 450 SMs. PMP 450i SMs do not support this center frequency.

 3 Edge frequencies are not supported by PMP 450i SMs, but they are supported by PMP 450 SMs. They can be selected with the 450m AP as long as there are no PMP 450i SMs in the sector.

 4 This EIRP value is the limit of the parameter configured in the PMP 450m GUI. Note that not all operating modes achieve the same EIRP.

The limits are as follows:

Sector mode	42 dBm
Beamforming mode QPSK	48 dBm
Beamforming mode 16-QAM	48 dBm
Beamforming mode 64-QAM	46 dBm
Beamforming mode 256-QAM	44 dBm
MU-MIMO mode	44 dBm

Frequency range 5.8 GHz band

Federal Communication Commission (FCC) specific information

FCC compliance testing

With GPS synchronization installed, the system has been tested for compliance to US (FCC) specifications. It has been shown to comply with the limits for emitted spurious radiation for a Class B digital device, pursuant to Part 15 of the FCC Rules in the USA. These limits have been designed to provide reasonable protection against harmful interference. However, the equipment can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to other radio communications. There is no guarantee that interference does not occur in a particular installation.

Note

A Class B Digital Device is a device that is marketed for use in a residential environment, notwithstanding use in commercial, business and industrial environments.

Note

Notwithstanding that Cambium has designed (and qualified) the 450 Platform Family ODUs to generally meet the Class B requirement to minimize the potential for interference, the 450 Platform Family ODU range is not marketed for use in a residential environment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference, and
- 2. This device must accept any interference received, including interference that may cause undesired operation.

FCC Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radiator technician for help.

Caution

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Note

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator & your body.

Industry Canada (IC)

Note

IC Radiation Exposure Statement:

This equipment complies with IC RSS-102 radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator and your body.

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

FCC approved antenna list for 450i

The lists of antennas which have been approved for operation by the FCC are provided in:

- USA approved antenna list 4.9 GHz for 4.9 GHz
- USA approved antenna list 5.1 and 5.2 GHz for 5.1 and 5.2 GHz
- USA approved antenna list 5.4 GHz for 5.4 GHz
- USA approved antenna list 5.8 GHz for 5.8 GHz

Any antenna of the same type and of gain equal or lower than the one approved by the FCC can be used in the countries following the FCC rules.

Table 227: USA approved antenna list 4.9 GHz

FCC approved antenna list for 450b Connectorized and 450 MicroPoP

Antennas with a maximum gain of 24 dBi were included in the approval.

Innovation Science and Economic Development Canada (ISEDC) specific information

900 MHz ISEDC notification

Radio Standards Specification RSS-247, Issue 1, Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and License-Exempt Local Area Network (LE-LAN) Devices, is a new standard to replace annexes 8 and 9 of RSS-210, Issue 8.

4.9 GHz ISEDC notification

The system has been approved under ISEDC RSS-111 for Public Safety Agency usage. The installer or operator is responsible for obtaining the appropriate site licenses before installing or using the system.

Utilisation de la bande 4.9 GHz FCC et ISEDC

Le système a été approuvé en vertu d' ISEDC RSS-111 pour l'utilisation par l'Agence de la Sécurité publique. L'installateur ou l'exploitant est responsable de l'obtention des licences de appropriées avant

d'installer ou d'utiliser le système.

5.2 GHz and 5.4 GHz ISEDC notification

This device complies with ISEDC RSS-247. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation. Users should be cautioned to take note that high power radars are allocated as primary users (meaning they have priority) of 5250 – 5350 MHz and 5650 – 5850 MHz and these radars could cause interference and/or damage to license-exempt local area networks (LELAN).

For the connectorized version of the product and in order to reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (EIRP) is not more than that permitted by the regulations. The transmitted power must be reduced to achieve this requirement.

Utilisation de la bande 5.2 and 5.4 GHz ISEDC

Cet appareil est conforme à ISEDC RSS-247. Son fonctionnement est soumis aux deux conditions suivantes: (1) Ce dispositif ne doit pas causer d'interférences nuisibles, et (2) Cet appareil doit tolérer toute interférence reçue, y compris les interférences pouvant entraîner un fonctionnement indésirable. Les utilisateurs doivent prendre garde au fait que les radars à haute puissance sont considères comme les utilisateurs prioritaires de 5250 à 5350 MHz et 5650 à 5850 MHz et ces radars peuvent causer des interférences et / ou interférer avec un réseau local ne nécessitant pas de licence.

Pour la version du produit avec antenne externe et afin de réduire le risque d'interférence avec d'autres utilisateurs, le type d'antenne et son gain doivent être choisis afin que la puissance isotrope rayonnée équivalente (PIRE) ne soit pas supérieure à celle permise par la règlementation. Il peut être nécessaire de réduire la puissance transmise doit être réduite pour satisfaire cette exigence.

ISEDC notification 5.8 GHz

RSS-GEN issue 3 (7.1.3) Licence-Exempt Radio Apparatus:

This device complies with ISEDC license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

In Canada, high power radars are allocated as primary users (meaning they have priority) of the 5600 – 5650 MHz spectrum. These radars could cause interference or damage to license-exempt local area network (LE-LAN) devices.

Utilisation de la bande 5.8 GHz ISEDC

RSS-GEN issue 3 (7.1.3) appareil utilisant la bande sans licence:

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Au Canada, les radars à haute puissance sont désignés comme utilisateurs principaux (ils ont la priorité) dans la bande 5600 à 5650 MHz. Ces radars peuvent causer des interférences et / ou interférer avec un réseau local ne nécessitant pas de licence.

109A0- 50450M	5 GHz PMP 450m AP	5.8 GHz	5 MHz	5730.0 - 5845.0 MHz	36 dBm
		10 MI 15 MI 20 M	10 MHz	5730.0 - 5845.0 MHz	36 dBm
			15 MHz	5732.5 - 5842.5 MHz	36 dBm
			20 MHz	5735.0 - 5840.0 MHz	36 dBm
			30 MHz	5265.0 - 5332.5 MHz	36 dBm
			40 MHz	5270.0 - 5325.0 MHz	36 dBm

Canada approved antenna list

Under ISEDC regulations, this radio transmitter may only operate using dedicated external antenna of a type and maximum (or lesser) gain approved for the transmitter by ISEDC. To reduce potential radio interference to other users, the antenna type and its gain must be so chosen that the equivalent isotropically radiated power (EIRP) is not more than that necessary for successful communication.

Conformément à la réglementation d'Industrie Canada, cet émetteur radio peut fonctionner avec une antenne externe dédiée d'un type et un gain maximal (ou moins) approuvé pour l'émetteur par Industrie Canada. Afin de réduire le risque d'interférence radio pour les autres utilisateurs, le type d'antenne et son gain doivent être choisis afin que la puissance irradiée isotrope équivalente (EIRP) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

This radio transmitter (identify the device by certification number) has been approved by ISEDC to operate with the antenna types listed in Country specific radio regulations, Innovation Science and Economic Development Canada (ISEDC) specific information, Canada approved dedicated external antenna list 4.9 and 5.8 GHz with the maximum permissible gain and required antenna impedance for each dedicated external antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Cet émetteur radio (identifier l'appareil par son numéro de certification) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenneexterne dédiée énumérées dans les règlements radiophoniques spécifiques au pays, Country specific radio regulations, Innovation Science and Economic Development Canada (ISEDC) specific information, Canada approved dedicated external antenna list 4.9 and 5.8 GHz et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne s'ils ne sont pas inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour le fonctionnement de l'émetteur.

Antenna type	Description	Manufacturer	Reference	Gain (di	Bi)

Chapter 5: Troubleshooting

This chapter contains procedures for identifying and correcting faults in a 450 Platform Family link. These procedures can be performed either on a newly installed link, or on an operational link if communication is lost, or after a lightning strike.

The following topics are described in this chapter:

- General troubleshooting procedure
- Troubleshooting procedures
- Power-up troubleshooting
- Power-up troubleshooting
- Logs

General troubleshooting procedure

General planning for troubleshooting

Effective troubleshooting depends in part on measures that you take before you experience trouble in your network. Cambium recommends the following measures for each site:

- Identify troubleshooting tools that are available at your site (such as a protocol analyzer).
- Identify commands and other sources that can capture baseline data for the site. These may include:
 - Ping
 - Tracert or traceroute
 - Link Capacity Test results
 - Throughput data
 - Configuration tab captures
 - Status tab captures
 - Session logs
 - Web browser used
- Start a log for the site.
- Include the following information in the log:
 - Types of hardware deployed
 - Site-specific troubleshooting processes

- Escalation procedures
- Operating procedures
- Site-specific configuration records
- Network topology

General fault isolation process

Effective troubleshooting also requires an effective fault isolation methodology that includes the following:

- Attempting to isolate the problem to the level of a system, subsystem, or link, such as
 - $\circ~$ AP to SM
 - AP to CMM4
 - AP to GPS
 - Backhaul (BH)
 - Backhaul (BH) to CMM4
 - Power
- Researching Event Logs of the involved equipment
- Interpreting messages in the Event Log
- Answering the questions listed in the following sections.
- Reversing the last previous corrective attempt before proceeding to the next.
- Performing only one corrective attempt at a time.

Questions to help isolate the problem

When a problem occurs, attempt to answer the following questions:

- What is the history of the problem?
 - Have we changed something recently?
 - Have we seen other symptoms before this?
- How wide-spread is the symptom?
 - $\circ~$ Is the problem on only a single SM? (If so, focus on that SM.)
 - Is the problem on multiple SMs? If so

- is the problem on one AP in the cluster? (If so, focus on that AP)
- is the problem on multiple, but not all, APs in the cluster? (If so, focus on those APs)
- is the problem on all APs in the cluster? (If so, focus on the CMM4 and the GPS signal.)
- Based on data in the Event Log
 - does the problem correlate to External Hard Resets with no WatchDog timers? (If so, this indicates a loss of power. Correct your power problem.)
 - is intermittent connectivity indicated? (If so, verify your configuration, power level, cables and connections and the speed duplex of both ends of the link).
 - does the problem correlate to loss-of-sync events?
- Are connections made via shielded cables?
- Does the GPS antenna have an unobstructed view of the entire horizon?
- Has the site grounding been verified?

Secondary Steps

After preliminary fault isolation is completed through the above steps, follow these:

- Check the Canopy knowledge base (<u>http://community.cambiumnetworks.com/</u> to find whether other network operators have encountered a similar problem.
- Proceed to any appropriate set of diagnostic steps. These are organized as follows:
 - Module has lost or does not establish connectivity
 - NAT/DHCP-configured SM has lost or does not establish connectivity
 - SM Does Not Register to an AP
 - Module has lost or does not gain sync
 - Module does not establish Ethernet connectivity
 - CMM4 does not pass proper GPS sync to connected modules
 - Module Software Cannot be Upgraded
 - Module Functions Properly, Except Web Interface Became Inaccessible

Troubleshooting procedures

Proceed to any appropriate set of diagnostic steps. These are organized as follows:

- Module has lost or does not establish connectivity
- NAT/DHCP-configured SM has lost or does not establish connectivity
- SM Does Not Register to an AP

- Module has lost or does not gain sync
- Module does not establish Ethernet connectivity
- CMM4 does not pass proper GPS sync to connected modules
- Module Software Cannot be Upgraded
- Module Functions Properly, Except Web Interface Became Inaccessible

Module has lost or does not establish connectivity

To troubleshoot a loss of connectivity, perform the following steps:

Procedure 29 Troubleshooting loss of connectivity

1	Isolate the end user/SM from peripheral equipment and variables such as routers, switches and firewalls.			
2	Set up the minimal amount of equipment.			
3	On each end of the link:			
	Check the cables and connections.			
	• Verify that the cable/connection scheme—straight-through or crossover—is correct.			
	• Verify that the LED labeled LNK is green.			
	Access the General Status tab in the Home page of the module.			
	• Verify that the SM is registered.			
	• Verify that Received Power Level is -87 dBm or higher.			
	Access the IP tab in the Configuration page of the module.			
	• Verify that IP addresses match and are in the same subnet.			
	If RADIUS authentication is configured, ensure that the RADIUS server is operational			
4	On the SM end of the link:			
	 Verify that the PC that is connected to the SM is correctly configured to obtain an IP address through DHCP. 			
	Execute ipconfig (Windows) or ifconfig (linux)			
	• Verify that the PC has an assigned IP address.			
5	On each end of the link:			
	 Access the General tab in the Configuration page of each module. 			
	• Verify that the setting for Link Speeds (or negotiation) matches that of the other module.			
	Access the Radio tab in the Configuration page of each module.			

	• Verify t Scan Se	that the Radio Frequency Carrier setting is checked in the Custom Radio Frequency election List.		
	• Verify that the Color Code setting matches that of the other module.			
	 Access the browser LAN settings (for example, at Tools > Internet Options > Connections > LAN Settings in Internet Explorer). 			
	 Verify that none of the settings are selected. 			
	Access the Link Capacity Test tab in the Tools page of the module.			
	Perforn	n a link test		
	• Verify that the link test results show efficiency greater than 90% in both the uplink and downlink			
	Execute ping.			
	0	Verify that no packet loss was experienced. Verify that response times are not significantly greater than		
		15 ms from SM to AP		
	 4 ms from AP to SM 			
	Replace any cables that you suspect may be causing the problem.			
		Note A ping size larger than 1494 Bytes to a module times out and fails. However, a ping of his size or larger to a system that is behind a Canopy module typically succeeds. It is generally advisable to ping such a system, since Canopy handles that ping with the ame priority as is given all other transport traffic. The results are unaffected by ping ize and by the load on the Canopy module that brokers this traffic.		
6	After connectivity has been re-established, reinstall network elements and variables that you removed in Step 1.			

NAT/DHCP-configured SM has lost or does not establish connectivity

Before troubleshooting this problem, identify the NAT/DHCP configuration from the following list:

- NAT with DHCP Client (DHCP selected as the Connection Type of the WAN interface) and DHCP Server
- NAT with DHCP Client (DHCP selected as the Connection Type of the WAN interface)
- NAT with DHCP Server
- NAT without DHCP

To troubleshoot a loss of connectivity for a SM configured for NAT/DHCP, perform the following steps.

Procedure 30 Troubleshooting loss of connectivity for NAT/DHCP-configured SM

1	Isolate the end user/SM from peripheral equipment and variables such as routers, switches and firewalls.
2	Set up the minimal amount of equipment.
3	On each end of the link:
	Check the cables and connections.
	 Verify that the cable/connection scheme—straight-through or crossover—is correct.
	 Verify that the LED labeled LNK is green.
4	At the SM:
	 Access the NAT Table tab in the Logs web page.
	 Verify that the correct NAT translations are listed.
	RESULT: NAT is eliminated as a possible cause if these translations are correct.
5	If this SM is configured for NAT with DHCP, then at the SM:
	Execute ipconfig (Windows) or ifconfig (Linux)
	 Verify that the PC has an assigned IP address.
	 If the PC does not have an assigned IP address, then
	 enter ipconfig /release "Adapter Name".
	 enter ipconfig /renew "Adapter Name".
	reboot the PC.
	 after the PC has completed rebooting, execute ipconfig
	 if the PC has an assigned IP address, then
	 access the NAT DHCP Statistics tab in the Statistics web page of the SM.
	 verify that DHCP is operating as configured.
6	After connectivity has been re-established, reinstall network elements and variables that you removed in Step 1.

SM Does Not Register to an AP

To troubleshoot a SM failing to register to an AP, perform the following steps.

Procedure 31 Troubleshooting SM failing to register to an AP

1	Access the Radio tab in the Configuration page of the SM.
2	Note the Color Code of the SM.
3	Access the Radio tab in the Configuration page of the AP.
4	Verify that the Color Code of the AP matches that of the SM.
5	Note the Radio Frequency Carrier of the AP.
6	Verify that the value of the RF Frequency Carrier of the AP is selected in the Custom Radio Frequency Scan Selection List parameter in the SM.

7	In the AP, verify that the Max Range parameter is set to a distance slightly greater than the distance between the AP and the furthest SM that must register to this AP.
8	Verify that no obstruction significantly penetrates the Fresnel zone of the attempted link.
9	Access the General Status tab in the Home page of each module.
10	Remove the bottom cover of the SM to expose the LEDs.
11	Power cycle the SM. RESULT: Approximately 25 seconds after the power cycle, the green LED labeled LNK must light to indicate that the link has been established. If the orange LED labeled SYN is lit instead, then the SM is in Alignment mode because the SM failed to establish the link.
12	If the AP is configured to require authentication, ensure proper configuration of RADIUS or Pre- shared AP key.
13	In this latter case and if the SM has encountered no customer-inflicted damage, then request an RMA for the SM.

Module has lost or does not gain sync

To troubleshoot a loss of sync, perform the following steps.

Procedure 32 Troubleshooting loss of sync

1	Access the Event Log tab in the Home page of the SM
2	Check for messages with the following format: RcvFrmNum = ExpFrmNum =
3	If these messages are present, check the Event Log tab of another SM that is registered to the same AP for messages of the same type.
4	If the Event Log of this second SM does not contain these messages, then the fault is isolated to the first SM.
	If the Event Log page of this second SM contains these messages, access the GPS Status page of the AP.
5	If the Satellites Tracked field in the GPS Status page of the AP indicates fewer than 4 or the Pulse Status field does not indicate Generating Sync, check the GPS Status page of another AP in the same AP cluster for these indicators. GPS signal acquisition must not take longer than 5 minutes from unit startup.
6	If these indicators are present in the second AP, then:
	 Verify that the GPS antenna still has an unobstructed view of the entire horizon. Visually inspect the cable and connections between the GPS antenna and the CMM4. If this cable is not shielded, replace the cable with shielded cable.
7	If these indicators are not present in the second AP, visually inspect the cable and connections between the CMM4 and the AP antenna. If this cable is not shielded, replace the cable with shielded cable.

Module does not establish Ethernet connectivity

To troubleshoot a loss of Ethernet connectivity, perform the following steps:

Procedure 33 Troubleshooting loss of Ethernet connectivity

1	Verify that the connector crimps on the Ethernet cable are not loose.
2	Verify that the Ethernet cable is not damaged.
3	If the Ethernet cable connects the module to a network interface card (NIC), verify that the cable is pinned out as a straight-through cable.
4	If the Ethernet cable connects the module to a hub, switch, or router, verify that the cable is pinned out as a crossover cable.
5	Verify that the Ethernet port to which the cable connects the module is set to auto-negotiate speed.
6	Verify VLAN configuration in the network, which may cause loss of module access if the accessing device is on a separate VLAN from the radio.
7	Power cycle the module. RESULT: Approximately 25 seconds after the power cycle, the green LED labeled LNK must light up to indicate that the link has been established. If the orange LED labeled SYN is lit instead, then the module is in Alignment mode because the module failed to establish the link.
8	In this latter case and if the module has encountered no customer-inflicted damage, then request an RMA for the module.

CMM4 does not pass proper GPS sync to connected modules

If the Event Log tabs in all connected modules contain Loss of GPS Sync Pulse messages, perform the following steps.

Procedure 34 Troubleshooting CMM4 not passing sync

1	Verify that the GPS antenna has an unobstructed view of the entire horizon.				
2	Verify that the GPS coaxial cable meets specifications.				
3	Verify that the GPS sync cable meets specifications for wiring and length.				
4	If the web pages of connected modules indicate any of the following, then find and eliminate the source of noise that is being coupled into the GPS sync cable:				
	In the GPS Status page:				
	 anomalous number of Satellites Tracked (greater than 12, for example) 				
	 incorrect reported Latitude and/or Longitude of the antenna 				
	 In the Event Log page: 				
	 garbled GPS messages 				
	 large number of Acquired GPS Sync Pulse messages 				

GPS signal acquisition must not take longer than 5 minutes from unit startup.
If these efforts fail to resolve the problem, then request an RMA for the CMM4.

Module Software Cannot be Upgraded

If your attempt to upgrade the software of a module fails, perform the following steps.

Procedure 35 Troubleshooting an unsuccessful software upgrade

1	Download the latest issue of the target release and the associated release notes.
2	Verify that the latest version of CNUT is installed.
3	Compare the files used in the failed attempt to the newly downloaded software.
4	Compare the procedure used in the failed attempt to the procedure in the newly downloaded release notes.
5	If these comparisons reveal a difference, retry the upgrade, this time with the newer file or newer procedure.
6	If, during attempts to upgrade the FPGA firmware, the following message is repeatable, then request an RMA for the module: Error code 6, unrecognized device

Module Functions Properly, Except Web Interface Became Inaccessible

If a module continues to pass traffic and the SNMP interface to the module continues to function, but the web interface to the module does not display, perform the following steps:

Procedure 36 Restoring web management GUI access

1	Enter telnet DottedIPAddress. RESULT: A telnet session to the module is invoked.				
2	At the Login prompt, enter root.				
3	At the Password prompt, enter PasswordIfConfigured.				
4	At the Telnet +> prompt, enter reset. RESULT: The web interface is accessible again and this telnet connection is closed.				
	9	Note The module may also be rebooted via an SNMP-based NMS (Wireless Manager, for example)			
5	If the issue persists, turn off any SNMP-based network/radio monitoring software and repeat steps 1-4.				

Power-up troubleshooting

Registration and connectivity troubleshooting

SM/BMS Registration

If no SMs are registered to this AP, then the Session Status tab displays the simple message No sessions. In this case, try the following steps.

1	More finely aim the SM or SMs toward the AP.
2	Recheck the Session Status tab of the AP for the presence of LUIDs.
3	If still no LUIDs are reported on the Session Status tab, click the Configuration button on the left side of the Home page. RESULT: The AP responds by opening the AP Configuration page.

4	Click the Radio tab.
5	Find the Color Code parameter and note the setting.
6	In the same sequence as you did for the AP directly under Configuration Link for Test in Planning and Installation Guide, connect the SM to a computing device and to power.
7	On the left side of the SM Home page, click the Configuration button. RESULT: The Configuration page of the SM opens.
8	Click the Radio tab.
9	If the transmit frequency of the AP is not selected in the Custom Radio Frequency Scan Selection List parameter, select the frequency that matches.
10	If the Color Code parameter on this page is not identical to the Color Code parameter you noted from the AP, change one of them so that they match.
11	At the bottom of the Radio tab for the SM, click the Save Changes button.
12	Click the Reboot button.
13	Allow several minutes for the SM to reboot and register to the AP.
14	Return to the computing device that is connected to the AP.
15	Recheck the Session Status tab of the AP for the presence of LUIDs.

Logs

Persistent Logging

PMP 450 SM supports logging information such as session logs, authentication logs, and authorization logs that are persistent through reboots and connectivity losses.

Navigate to Logs to view:

- SM Session
- SM Authentication
- SM Authorization

All the SM logs are saved to flash and displayed upon reboot.

Figure 119: SM Logs

PMP 450m Reference information

A.1 Specifications

Please see the Specification sheets listed on the Cambium Networks website for the most up-to-date PMP 450m Series AP specifications:

http://www.cambiumnetworks.com/resource/pmp-450m/

A.2 PMP 450m overload

The PMP 450m Series AP is designed to handle high load in terms of high throughput and high PPS. In terms of throughput, PMP 450m is designed to achieve 3x or more throughput improvement over PMP 450 and PMP 450i Series products. In terms of packets per second (PPS), PMP 450m is designed to handle more than 100K PPS.

Overload occurs when the offered load exceeds the above limits. When overload occurs, PMP 450m will start discarding packets and TCP throughput will degrade due to packet loss. The PMP 450 family of products have a set of overload statistics that can be used to monitor overload conditions (**Statistics** > **Overload** tab).

Figure 123: Overload tab

Cambi	um Networks					
Home Configuration Statistics Tools Engineering Logs Accounts Quick Shart Copyright Logoff	Schedver M. Huffer SM Begestation Factors Univer Control Block Testing Table Control Social Factor VLAN: Data VCB MRRBunn Through Statistics (INS Statistics) SNMTV3 Statistics (MITTP Turewi Statistics) Overload EPCP Reday Press Testing Statistics (INS Statistics) SNMTV3 Statistics (MITTP Turewi Statistics) Statistics — Overload 5.7GHz MU-MIMO OFDM - Access Point 0a-00-3e-60-32-65					
Account eng Level ENGINEERING Mode Read Write Authentication Method: Local	Packet Overload Statistics	Chur Statistics				
CANORY	Ethernet in Discards (Statatica=>Ethernat>>RzOverun + Statatica=>Endge Control Bicca=>EndgecQSend)	0				
co Medusa	Ethernet Out Discards (State:c==Ethernet=-outdocards.court)	0				
	HP- In Discards (Sum of all VCs of Statistics*+Data VC=+ediscards count)	0				
	RF Out Discards (Statuticer=Radio=outdiscards count)	0				
		Chur Statistice				

The above statistics shall be monitored over time for overload conditions over consecutive periods. Refer to Interpreting Overload statistics for description of those statistics.

It's worth noting that Frame Utilization statistics (**Statistics** > **Frame Utilization** tab: Frame Utilization: Downlink and Uplink) are not necessarily indicative of overload condition. They show how much the TDD frame is utilized. High frame utilization depends on:

- 1. High traffic during busy periods: those statistics will be close to 100% and almost all slots will be utilized. In this case if the Overload statistics show that packets are discarded then this is an indication of overload condition.
- 2. High percentage of VCs with low modulation with moderate traffic. Those VCs will require more slots to service them (due to low modulation) and the frame utilization will be high. In this case the TDD frame is fully utilized but the system is at low capacity and is not in an overload condition.

450m has higher PPS than PMP 450 and PMP 450i and supports higher throughput through spatial multiplexing, therefore when a PMP 450m replaces an overloaded 450 or PMP 450i AP the PMP 450m will not be overloaded under the same conditions but the frame utilization may still show close to 100%; this should not alarm the customer. The overload statistics shall be monitored on PMP 450m to see if it is overloaded or not.

Quality of Service (QoS) Glossary

Term	Definition				
10Base-T	Technology in Ethernet communications that can deliver 10 Mb of data across 328 feet (100 meters) of CAT 5 cable.				
169.254.0.0	Gateway IP address default in Cambium fixed wireless broadband IP network modules.				
169.254.1.1	IP address default in Cambium fixed wireless broadband IP network modules.				
255.255.0.0	Subnet mask default in Cambium fixed wireless broadband IP network modules and in Microsoft and Apple operating systems.				
802.3 An IEEE standard that defines the contents of frames that are transferre Ethernet connections. Each of these frames contains a preamble, the ad which the frame is sent, the address that sends the frame, the length of t expect, the data, and a checksum to validate that no contents were lost.					
Access PointTwo to six Access Point Modules that together distribute network or Internet Services to a community of subscribers. Each Access Point Module covers a 90° sector. This cluster covers as much as 360°. Also known as AP cluster.					
Access Point Module	Also known as AP. One module that distributes network or Internet services in a 60° or 90° sector.				
ACT/4	Second-from-left LED in the module. In the operating mode, this LED is lit when data activity is present on the Ethernet link.				
Address Resolution Protocol	Protocol defined in RFC 826 to allow a network element to correlate a host IP address to the Ethernet address of the host. See <u>http://www.faqs.org/rfcs/rfc826.html.</u>				
Aggregate Throughput	The sum of the throughputs in the uplink and the downlink.				
AP	Access Point Module. One module that distributes network or Internet services to subscriber modules.				
ARP	Address Resolution Protocol. A protocol defined in RFC 826 to allow a network element to correlate a host IP address to the Ethernet address of the host. See http://www.faqs.org/rfcs/rfc826.html .				
APs MIB	Management Information Base file that defines objects that are specific to the Access Point Module. See also Management Information Base.				
ASN.1 Abstract Syntax Notation One language. The format of the text files that the Management Information Base.					
Attenuation Reduction of signal strength caused by the travel from the transmitter to receiver, and caused by any object between. In the absence of objects between signal that has a short wavelength experiences a high degree of attenuation nevertheless.					
BER	Bit Error Rate. The ratio of incorrect data received to correct data received.				

Term	Definition				
внм	Backhaul Timing Master (BHM)- a module that is used in a point to point link. This module controls the air protocol and configurations for the link				
BHS	Backhaul Timing Slave (BHS)- a module that is used in a point to point link. This module accepts configuration and timing from the master module.				
Bit Error Rate	Ratio of incorrect data received to correct data received.				
Box MIB	Management Information Base file that defines module-level objects. See also Management Information Base.				
Bridge	Network element that uses the physical address (not the logical address) of another to pass data. The bridge passes the data to either the destination address, if found in the simple routing table, or to all network segments other than the one that transmitted the data. Modules are Layer 2 bridges except that, where NAT is enabled for an SM, the SM is a Layer 3 switch. Compare to Switch and Router, and see also NAT.				
Buckets Theoretical data repositories that can be filled at preset rates or emptied wh preset conditions are experienced, such as when data is transferred.					
Burst	Preset amount limit of data that may be continuously transferred.				
CAT 5 Cable	Cable that delivers Ethernet communications from module to module. Later modules auto-sense whether this cable is wired in a straight-through or crossover scheme.				
CIR	Committed Information Rate. For an SM or specified group of SMs, a level of bandwidth that can be guaranteed to never fall below a specified minimum (unless oversubscribed). In the Cambium implementation, this is controlled by the Low Priority Uplink CIR, Low Priority Downlink CIR, Medium Priority Uplink CIR, Medium Priority Downlink CIR parameters, High Priority Uplink CIR, High Priority Downlink CIR parameters, Ultra High Priority Uplink CIR, and Ultra High Priority Downlink CIR parameters.				
Cluster Management Module	Module that provides power, GPS timing, and networking connections for an AP cluster. Also known as CMM4.				
СММ	Cluster Management Module. A module that provides power, GPS timing, and networking connections for an Access Point cluster.				
CodePoint	See DiffServ.				
Color Code Field	Module parameter that identifies the other modules with which communication is allowed. The range of valid values is 0 to 255.				
Community String Field	Control string that allows a network management station to access MIB information about the module.				
Connectorized	The 450 Platform Family Connectorized Radio solution provide RF port to connect external antenna. It gives flexibility to connect to a variety of external antennas.				

Term	Definition					
Country Code	A parameter that offers multiple fixed selections, each of which automatically implements frequency band range restrictions for the selected country. Units shipped to countries other than the United States must be configured with the corresponding Region Code and Country Code to comply with local regulatory requirements.					
CRCError Field	This field displays how many CRC errors occur	red on th	e Etherne	t controll	er.	
Data Encryption Standard	Over-the-air link option that uses secret 56-bit keys and 8 parity bits. Data Encryption Standard (DES) performs a series of bit permutations, substitutions, and recombination operations on blocks of data.					
Demilitarized Zone	Internet Protocol area outside of a firewall. Defined in RFC 2647. See http://www.faqs.org/rfcs/rfc2647.html .					
DES	Data Encryption Standard. An over-the-air link option that uses secret 56-bit keys and 8 parity bits. DES performs a series of bit permutations, substitutions, and recombination operations on blocks of data.					
DFS	See Dynamic Frequency Selection					
DHCP	Dynamic Host Configuration Protocol, defined in RFC 2131. Protocol that enables a device to be assigned a new IP address and TCP/IP parameters, including a default gateway, whenever the device reboots. Thus DHCP reduces configuration time, conserves IP addresses, and allows modules to be moved to a different network within the system. <u>See http://www.faqs.org/rfcs/rfc2131.html</u> . See also Static IP Address Assignment.					
DiffServ Differentiated Services, consistent with RFC 2474. A byte in the type of service (TOS) field of packets whose values correlates to the channel on which the packets should be sent. The value is a numeric code point. The PMP 450 AP's support for levels of QoS. The mapping of these eight priority values to data channels is determined by the number of data channels configured per SM as shown in the below:					rvice e packet ort four is n the table	
	Number of QoS levels \rightarrow	1	2	3	4	
	Level 1	0-7	0-3	0-1	0-1	
	Level 2		4-7	2-3	2-3	
	Level 3	•	-	4-7	4-5	
	Level 4	-	-	-	6-7	
For example, for an AP that uses the default table shown above has configured QoS levels per SM, would see codepoints 0 through 15 mapped to the Low Prid data channels, codepoint 16 would be mapped to the Medium Priority data cha and so on.				ured 3 Priority channels,		

Term	Definition	
	Note that CodePoints 0, 8, 16, 24, 32, 48, and 56 are predefined to the fixed values shown in Table 22 DiffServ attributes – AP/BHM and are not user configurable. Operator cannot change any of these fixed priority values. Among the configurable parameters, the priority values (and therefore the handling of packets in the high or low priority channel) are set in the AP/BHM for all downlinks within the sector and in the SM/BHS for each uplink.	
DMZ	Demilitarized Zone as defined in RFC 2647. An Internet Protocol area outside of a firewall. See http://www.faqs.org/rfcs/rfc2647.html .	
Dynamic Frequency Selection	A requirement in certain countries and regions for systems to detect	
	interference from other systems, notably radar systems, and to avoid co-channel operation with these systems.	
Dynamic Host Configuration Protocol	See DHCP.	
Electronic Serial Number	Hardware address that the factory assigns to the module for identification in the Data Link layer interface of the Open Systems Interconnection system. This addres serves as an electronic serial number. Same as MAC Address.	
ESN	Electronic Serial Number. The hardware address that the factory assigns to the module for identification in the Data Link layer interface of the Open Systems Interconnection system. This address serves as an electronic serial number. Same as MAC Address.	
Ethernet Protocol	Any of several IEEE standards that define the contents of frames that are transferred from one network element to another through Ethernet connections.	
ETSI	European Telecommunications Standards Institute	
Fade Margin	The difference between strength of the received signal and the strength that the receiver requires for maintaining a reliable link. A higher fade margin is characteristic of a more reliable link. Standard operating margin.	
FCC	Federal Communications Commission of the U.S.A.	
Field- programmable Gate Array	Array of logic, relational data, and wiring data that is factory programmed and can be reprogrammed.	
File Transfer Protocol	Utility that transfers of files through TCP (Transport Control Protocol) between computing devices that do not operate on the same platform. Defined in RFC 959. See http://www.faqs.org/rfcs/rfc959.html .	
FPGA	Field-programmable Gate Array. An array of logic, relational data, and wiring data that is factory programmed and can be reprogrammed.	
Free Space Path Loss	Signal attenuation that is naturally caused by atmospheric conditions and by the distance between the antenna and the receiver.	
Fresnel Zone Space in which no object should exist that can attenuate, diffract, or reflect transmitted signal before the signal reaches the target receiver.		

Term	Definition	
FTP	File Transfer Protocol, defined in RFC 959. Utility that transfers of files through TCP (Transport Control Protocol) between computing devices that do not operate on the same platform. See <u>http://www.faqs.org/rfcs/rfc959.html.</u>	
Global Positioning System	Network of satellites that provides absolute time to networks on earth, which use the time signal to synchronize transmission and reception cycles (to avoid interference) and to provide reference for troubleshooting activities.	
GPS	Global Positioning System. A network of satellites that provides absolute time to networks on earth, which use the time signal to synchronize transmission and reception cycles (to avoid interference) and to provide reference for troubleshooting activities.	
GPS/3	Third-from-left LED in the module. In the operating mode for an Access Point Module, this LED is continuously lit as the module receives sync pulse. In the operating mode for a Subscriber, this LED flashes on and off to indicate that the module is not registered.	
GUI	Graphical user interface.	
НТТР	Hypertext Transfer Protocol, used to make the Internet resources available on the World Wide Web. Defined in RFC 2068. See <u>http://www.faqs.org/rfcs/rfc2068.htm</u>	
HTTPS	Hypertext Transfer Protocol Secure (HTTPS)	
ICMP	Internet Control Message Protocols defined in RFC 792, used to identify Internet Protocol (IP)-level problems and to allow IP links to be tested. See <u>http://www.faqs.org/rfcs/rfc792.html.</u>	
Integrated	The 450 Platform Family integrated Radio solution provides integrated antenna	
IP	Internet Protocol defined in RFC 791. The Network Layer in the TCP/IP protocol stack. This protocol is applied to addressing, routing, and delivering, and re- assembling data packets into the Data Link layer of the protocol stack. See <u>http://www.faqs.org/rfcs/rfc791.html.</u>	
IP Address	32-bit binary number that identifies a network element by both network and host. See also Subnet Mask.	
IPv4	Traditional version of Internet Protocol, which defines 32-bit fields for data transmission.	
ISM	Industrial, Scientific, and Medical Equipment radio frequency band, in the 900 MHz, 2.4 GHz, and 5.8 GHz ranges.	
L2TP over IPSec	Level 2 Tunneling Protocol over IP Security. One of several virtual private network (VPN) implementation schemes. Regardless of whether Subscriber Modules have the Network Address Translation feature (NAT) enabled, they support VPNs that are based on this protocol.	

Term	Definition	
Late Collision Field	This field displays how many late collisions occurred on the Ethernet controller. A normal collision occurs during the first 512 bits of the frame transmission. A collis that occurs after the first 512 bits is considered a late collision. A late collision is a serious network problem because the frame being transmitted is discarded. A la collision is most commonly caused by a mismatch between duplex configuration the ends of a link segment.	
Line of Sight	Wireless path (not simply visual path) direct from module to module. The path that results provides both ideal aim and an ideal Fresnel zone.	
LNK/5	Furthest left LED in the module. In the operating mode, this LED is continuously lit when the Ethernet link is present. In the aiming mode for a Subscriber Module, this LED is part of a bar graph that indicates the quality of the RF link.	
Logical Unit ID	Final octet of the 4-octet IP address of the module.	
LOS	Line of sight. The wireless path (not simply visual path) direct from module to module. The path that results provides both ideal aim and an ideal Fresnel zone.	
LUID	Logical Unit ID. The final octet of the 4-octet IP address of the module.	
MAC Address	Media Access Control address. The hardware address that the factory assigns to the module for identification in the Data Link layer interface of the Open Systems Interconnection system. This address serves as an electronic serial number.	
Management Information Base	Space that allows a program (agent) in the network to relay information to a network monitor about the status of defined variables (objects).	
Maximum Information Rate (MIR)	The cap applied to the bandwidth of an SM or specified group of SMs. In the Cambium implementation, this is controlled by the Sustained Uplink Data Rate, Uplink Burst Allocation, Sustained Downlink Data Rate, and Downlink Burst Allocation parameters.	
MIB	Management Information Base. Space that allows a program (agent) in the network to relay information to a network monitor about the status of defined variables (objects).	
MIR	See Maximum Information Rate.	
MU-MIMO	Multi User- Multiple Input Multiple Output	
NAT	Network Address Translation defined in RFC 1631. A scheme that isolates Subscriber Modules from the Internet. See <u>http://www.faqs.org/rfcs/rfc1631.html.</u>	
NEC	National Electrical Code. The set of national wiring standards that are enforced in the U.S.A.	
NetBIOS	Protocol defined in RFC 1001 and RFC 1002 to support an applications programs interface in TCP/IP. This interface allows a computer to transmit and receive dat with another host computer on the network. <u>RFC 1001 defines the concepts and methods</u> . RFC 1002 defines the detailed specifications. See <u>http://www.faqs.org/rfcs/rfc1001.html and</u> <u>http://www.faqs.org/rfcs/rfc1002.h</u>	

Term	Definition	
Network Address Translation	Scheme that defines the Access Point Module as a proxy server to isolate registered Subscriber Modules from the Internet. Defined in RFC 1631. See <u>http://www.faqs.org/rfcs/rfc1631.html.</u>	
Network Management Station	See NMS.	
NMS	Network Management Station. A monitor device that uses Simple Network Management Protocol (SNMP) to control, gather, and report information about predefined network variables (objects). See also Simple Network Management Protocol.	
Default Mode	Device that enables the operator to regain control of a module that has been locked by the No Remote Access feature, the 802.3 Link Disable feature, or a password or IP address that cannot be recalled. This device can be either fabricated on site or ordered.	
PMP	See Point-to-Multipoint Protocol.	
Point-to- Multipoint Protocol	Defined in RFC 2178, which specifies that data that originates from a central network element can be received by all other network elements, but data that originates from a non-central network element can be received by only the central network element. See http://www.faqs.org/rfcs/rfc2178.html . Also referenced as PMP.	
PPPoE	Point to Point Protocol over Ethernet. Supported on SMs for	
	operators who use PPPoE in other parts of their network operators who want to deploy PPPoE to realize per-subscriber authentication, metrics, and usage control.	
PPS	Packet Per Second	
РРТР	Point to Point Tunneling Protocol. One of several virtual private network implementations. Regardless of whether the Network Address Translation (NAT) feature enabled, Subscriber Modules support VPNs that are based on this protocol.	
Protective Earth	Connection to earth (which has a charge of 0 volts). Also known as ground.	
Proxy Server	Network computer that isolates another from the Internet. The proxy server communicates for the other computer, and sends replies to only the appropriate computer, which has an IP address that is not unique or not registered.	
РТР	A Point-to-Point connection refers to a communications connection between two nodes or endpoints.	
Radio Signal Strength Indicator	Relative measure of the strength of a received signal. An acceptable link displays a Radio Signal Strength Indicator (RSSI) value of greater than 700.	

Term	Definition	
Reflection	Change of direction and reduction of amplitude of a signal that encounters an object larger than the wavelength. Reflection may cause an additional copy of the wavelength to arrive after the original, unobstructed wavelength arrives. This causes partial cancellation of the signal and may render the link unacceptable. However, in some instances where the direct signal cannot be received, the reflected copy may be received and render an otherwise unacceptable link acceptable.	
Region Code	A parameter that offers multiple fixed selections, each of which automatically implements frequency band range restrictions for the selected region. Units shippe to regions other than the United States must be configured with the corresponding Region Code to comply with local regulatory requirements.	
RF	Radio frequency. How many times each second a cycle in the antenna occurs, from positive to negative and back to positive amplitude.	
RJ-12	Standard cable that is typically used for telephone line or modem connection.	
RJ-45	Standard cable that is typically used for Ethernet connection. This cable may be wired as straight-through or as crossover. Later modules auto-sense whether the cable is straight-through or crossover.	
Router	Network element that uses the logical (IP) address of another to pass data to only the intended recipient. Compare to Switch and Bridge.	
RSSI	Radio Signal Strength Indicator. A relative measure of the strength of a received signal. An acceptable link displays an RSSI value of greater than 700.	
Self- interference	Interference with a module from another module in the same network.	
SFP	Small Form-factor Pluggable	
Simple Network Management Protocol	Standard that is used for communications between a program (agent) in the network and a network management station (monitor). Defined in RFC 1157. See http://www.faqs.org/rfcs/rfc1157.html .	
SM	Customer premises equipment (CPE) device that extends network or Internet services by communication with an Access Point Module or an Access Point cluster.	
SNMP	See Simple Network Management Protocol, defined in RFC 1157.	
SNMPv3	SNMP version 3	
SNMP Trap	Capture of information that informs the network monitor through Simple Network Management Protocol of a monitored occurrence in the module.	
Spatial Frequency	Spatial Frequency is associated with an LUID or SM registered with an AP and it is visible on both AP and SM GUIs. It is grouped into bins where each bin includes 32 consecutive spatial frequency values.	
Static IP Address Assignment	Assignment of Internet Protocol address that can be changed only manually. T static IP address assignment requires more configuration time and consumes n of the available IP addresses than DHCP address assignment does. RFC 2050 provides guidelines for the static allocation of IP addresses. See <u>http://www.faqs.org/rfcs/rfc2050.html</u> . See also DHCP.	

Term	Definition	
Subnet Mask	32-bit binary number that filters an IP address to reveal what part identifies the network and what part identifies the host. The number of subnet mask bits that are set to 1 indicates how many leading bits of the IP address identify the network. The number of subnet mask bits that are set 0 indicate how many trailing bits of the IP address identify the host.	
Subscriber Module	Customer premises equipment (CPE) device that extends network or Internet services by communication with an Access Point Module or an Access Point cluster.	
Sustained Data Rate	Preset rate limit of data transfer.	
Switch	Network element that uses the port that is associated with the physical address of another to pass data to only the intended recipient. Compare to Bridge and Router.	
Sync	GPS (Global Positioning System) absolute time, which is passed from one module to another. Sync enables timing that prevents modules from <u>transmitting or receiving</u> interference. Sync also provides correlative time stamps for troubleshooting efforts.	
ТСР	Alternatively known as Transmission Control Protocol or Transport Control Protocol. The Transport Layer in the TCP/IP protocol stack. This protocol is applied to assure that data packets arrive at the target network element and to control the flow of data through the Internet. Defined in RFC 793. See <u>http://www.faqs.org/rfcs/rfc793.html.</u>	
TDD	Time Division Duplexing. Synchronized data transmission with some time slots allocated to devices transmitting on the uplink and some to the device transmitting on the downlink.	
telnet	Utility that allows a client computer to update a server. A firewall can prevent the use of the telnet utility to breach the security of the server. See <u>http://www.faqs.org/rfcs/rfc818.html, http://www.faqs.org/rfcs/rfc854.html and http://www.faqs.org/rfcs/rfc855.html.</u>	
Tokens	Theoretical amounts of data. See also Buckets.	
TxUnderrun Field	This field displays how many transmission-underrun errors occurred on the Ethernet controller.	
UDP	User Datagram Protocol. A set of Network, Transport, and Session Layer protocols that RFC 768 defines. These protocols include checksum and address information but does not retransmit data or process any errors. See http://www.faqs.org/rfcs/rfc768.html .	
udp	User-defined type of port.	
U-NII	Unlicensed National Information Infrastructure radio frequency band, in the 5.1 GHz through 5.8 GHz ranges.	
VID	VLAN identifier. See also VLAN.	
VLAN	Virtual local area network. An association of devices through software that contains broadcast traffic, as routers would, but in the switch-level protocol.	

Term	Definition
VPN	Virtual private network for communication over a public network. One typical use is to connect remote employees, who are at home or in a different city, to their corporate network over the Internet. Any of several VPN implementation schemes is possible. SMs support L2TP over IPSec (Level 2 Tunneling Protocol over IP Security) VPNs and PPTP (Point to Point Tunneling Protocol) VPNs, regardless of whether the Network Address Translation (NAT) feature enabled.

Cambium Networks

Cambium Networks delivers wireless communications that work for businesses, communities, and cities worldwide. Millions of our radios are deployed to connect people, places and things with a unified wireless fabric that spans multiple standards and frequencies of fixed wireless and Wi-Fi, all managed centrally via the cloud. Our multi-gigabit wireless fabric offers a compelling value proposition over traditional fiber and alternative wireless solutions. We work with our Cambium certified ConnectedPartners to deliver purpose built networks for service provider, enterprise, industrial, and government connectivity solutions in urban, suburban, and rural environments, with wireless that just works.
