September 22, 2014

To Whom It May Concern,

Trimble Navigation is applying for Limited Modular Approval, FCC ID: JUP-95807WFBT/ IC: 1756A-95807WFBT, which is a Wi-Fi/Bluetooth module manufactured by Murata, LBEE1DAARRC-519 (based on the Marvell Avastar 88W8787 SoC), which is integrated into three Trimble hosts: Trimble R10, Trimble P/N 100070-xx, and Trimble P/N 9058x-xx.

The original Murata module supports 5 GHz WLAN and 802.11n functions as indicated in their original module and SoC documentation. Trimble's host implantations, however, do not support 5 GHz WLAN or 802.11n functionality, so it is not Trimble's intention to include them as part of their Limited Modular Approval application or in the Trimble host user documentation.

Sincerely,

A handwritten signature in blue ink, appearing to read "Gerardo Torres".

Gerardo Torres
