# **FCC RF Test Report**

Report No.: FR4O2508D

1190

APPLICANT : Quanta Computer Inc.

**EQUIPMENT**: Clover Mobile WiFi

BRAND NAME : Clover MODEL NAME : C200

FCC ID : HFS-C200

STANDARD : FCC Part 15 Subpart C §15.225

**CLASSIFICATION**: (DXX) Low Power Communication Device Transmitter

The testing was completed on Dec. 31, 2014. We, SPORTON INTERNATIONAL INC., would like to declare that the tested sample has been evaluated in accordance with the test procedures and has been in compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

Reviewed by: Joseph Lin / Supervisor

## 1. GENERAL INFORMATION

## 1.1 Applicant

#### **Quanta Computer Inc.**

No.188, Wenhua 2nd Rd., Guishan Dist., Taoyuan City 33377, Taiwan

#### 1.2 Manufacturer

#### **Quanta Computer Inc.**

No.188, Wenhua 2nd Rd., Guishan Dist., Taoyuan City 33377, Taiwan

#### 1.3 Product Details

| Items                 | Description        |
|-----------------------|--------------------|
| Tx/Rx Frequency Range | 13.553 ~ 13.567MHz |
| Channel Number        | 1                  |
| 20dBW                 | 2.640 KHz          |
| 99%OBW                | 2.240 KHz          |
| Antenna Type          | PCB Antenna        |
| Type of Modulation    | ASK                |

Report No.: FR4O2508D

**Remark:** The above EUT's information was declared by manufacturer. Please refer to the specifications or user's manual for more detailed description.

| Accessory List |   |  |  |  |
|----------------|---|--|--|--|
| AC Adaptor 1   | Brand Name: Clover                      |  |  |  |
| AC Adapter 1   | Model Name: WB-10G05FU                  |  |  |  |
| AC Ademies 2   | Brand Name: Clover                      |  |  |  |
| AC Adapter 2   | Model Name: WB-10G05R                   |  |  |  |
| Dettem         | Brand Name: CELXPERT ENERGY CORPORATION |  |  |  |
| Battery        | Model Name: CQT-1401                    |  |  |  |
| LICD Cable     | Brand Name: Golden Bridge Electech Inc. |  |  |  |
| USB Cable      | Model Name: AA002GB-B0308BX             |  |  |  |

## 1.4 Modification of EUT

No modifications are made to the EUT during all test items.

| Temperature        | 22~24   | 20~22     | 21~23        | 4086B-1             |
| Relative Humidity  | 53~55   | 46~48     | 47~49        |                     |

**Note:** The test site complies with ANSI C63.4 2009 requirement.

#### 1.6 Applicable Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- FCC Part 15 Subpart C §15.225
- ANSI C63.10-2009

#### 1.7 Test Modes

Investigation has been done on all the possible configurations for searching the worst cases. The following table is a list of the test modes shown in this test report.

| Test Items                        |   |  |  |
|-----------------------------------|---|--|--|
| AC Power Line Conducted Emissions | Field Strength of Fundamental Emissions |  |  |
| 20dB Spectrum Bandwidth           | Frequency Stability                     |  |  |
| Radiated Emissions 9kHz~30MHz     | Radiated Emissions 30MHz~1GHz           |  |  |

#### Note:

- 1. The EUT was programmed to be in continuously transmitting mode.
- The ancillary equipment, NFC card, is used to make the EUT (NFC) continuously transmit at 13.56MHz and is placed around 3 cm gap to the EUT.

Report No.: FR4O2508D

#### 2.4 AC Power Line Conducted Emissions Measurement

#### 2.4.1 Limit

For equipment that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table.

Report No.: FR4O2508D

| Frequency of Emission | Conducted Limit (dBμV) |           |  |
|-----------------------|------------------------|-----------|--|
| (MHz)                 | Quasi-Peak             | Average   |  |
| 0.15-0.5              | 66 to 56*              | 56 to 46* |  |
| 0.5-5                 | 56                     | 46        |  |
| 5-30                  | 60                     | 50        |  |

<sup>\*</sup>Decreases with the logarithm of the frequency.

#### 2.4.2 Test Procedures

- 1. The EUT was placed 0.4 meter from the conducting wall of the shielding room, and it was kept at least 80 centimeters from any other grounded conducting surface.
- 2. Connect EUT to the power mains through a line impedance stabilization network (LISN).
- 3. All the support units are connecting to the other LISN.
- 4. The LISN provides 50 ohm coupling impedance for the measuring instrument.
- 5. The FCC states that a 50 ohm, 50 microhenry LISN should be used.
- 6. Both sides of AC line were checked for maximum conducted interference.
- 7. The frequency range from 150 kHz to 30 MHz was searched.
- 8. Set the test-receiver system to Peak Detect Function and specified bandwidth (IF Bandwidth = 9kHz) with Maximum Hold Mode. Then measurement is also conducted by Average Detector and Quasi-Peak Detector Function respectively.

## 3. CONDUCTED TEST ITEMS

## 3.1 Measuring Instruments

See list of measuring instruments of this test report.

## 3.2 Test Setup

## 3.2.1 20dB Spectrum Bandwidth

## 3.2.2 Frequency Stability

## 3.3 Test Result of Conducted Test Items

Please refer to Appendix C.

SPORTON INTERNATIONAL INC.

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: HFS-C200 Page Number : 11 of 17
Report Issued Date : Jan. 27, 2015
Report Version : Rev. 01

Report No.: FR4O2508D

## 3.4 20dB Spectrum Bandwidth Measurement

#### 3.4.1 Limit

Intentional radiators must be designed to ensure that the 20 dB bandwidth of the emissions in the specific band 13.553~13.567MHz

Report No.: FR4O2508D

#### 3.4.2 Test Procedures

- The transmitter output (antenna port) was connected to the spectrum analyzer in peak Max hold mode.
- 2. The resolution bandwidth of 1 kHz and the video bandwidth of 3 kHz were used.
- 3. Measured the spectrum width with power higher than 20dB below carrier.

## 3.5 Frequency Stability Measurement

#### 3.5.1 Limit

The frequency tolerance of the carrier signal shall be maintained within +/- 0.01% (100ppm) of the operating frequency over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery.

#### 3.5.2 Test Procedures

- 1. The transmitter output (antenna port) was connected to the spectrum analyzer.
- 2. EUT have transmitted signal and fixed channelize.
- 3. Set the spectrum analyzer span to view the entire emissions bandwidth.
- 4. Set RBW = 1 kHz, VBW = 3 kHz with peak detector and maxhold settings.
- 5. The fc is declaring of channel frequency. Then the frequency error formula is  $(fc-f)/fc \times 10^6$  ppm and the limit is less than  $\pm 100$ ppm.
- Extreme temperature rule is -20°C~50°C.

## 4. RADIATED TEST ITEMS

## 4.1 Measuring Instruments

See list of measuring instruments of this test report.

## 4.2 Test Setup

#### 4.2.1 For radiated emissions below 30MHz

#### 4.2.2 For radiated emissions above 30MHz

#### 4.3 Test Result of Radiated Test Items

Please refer to Appendix D.

Report No.: FR4O2508D

#### 4.4.2 Test Procedures

- Configure the EUT according to ANSI C63.4. The EUT was placed on the top of the turntable 0.8
  meter above ground. The phase center of the loop receiving antenna mounted antenna tower
  was placed 3 meters far away from the turntable.
- Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- 3. The height of the receiving antenna was fixed at one meter above ground to find the maximum emissions field strength.
- 4. For Fundamental emissions, use the receiver to measure QP reading.
- 5. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.
- 6. Compliance with the spectrum mask is tested using a spectrum analyzer with RBW set to a 9kHz for the band 13.553~13.567MHz.

Note: Emission level  $(dB\mu V/m) = 20 \log Emission level (\mu V/m)$ .

#### 4.5 Radiated Emissions Measurement

#### 4.5.1 Limit

The field strength of any emissions which appear outside of 13.553~13.567MHz band shall not exceed the general radiated emissions limits.

Report No.: FR4O2508D

| Frequencies | Field Strength | Measurement Distance |
|-------------|----------------|----------------------|
| (MHz)       | (μV/m)         | (meters)             |
| 0.009~0.490 | 2400/F(kHz)    | 300                  |
| 0.490~1.705 | 24000/F(kHz)   | 30                   |
| 1.705~30.0  | 30             | 30                   |
| 30~88       | 100            | 3                    |
| 88~216      | 150            | 3                    |
| 216~960     | 200            | 3                    |
| Above 960   | 500            | 3                    |

## 4.5.2 Measuring Instrument Setting

The following table is the setting of receiver.

| Receiver Parameter             | Setting             |
|--------------------------------|---------------------|
| Attenuation                    | Auto                |
| Frequency Range: 9kHz~150kHz   | RBW 200Hz for QP    |
| Frequency Range: 150kHz~30MHz  | RBW 9kHz for QP     |
| Frequency Range: 30MHz~1000MHz | RBW 120kHz for Peak |

**Note:** The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz. Radiated emission limits in these two bands are based on measurements employing an average detector.

#### 4.5.3 Test Procedures

- Configure the EUT according to ANSI C63.4. The EUT was placed on the top of the turntable 0.8
  meter above ground. The phase center of the receiving antenna mounted on the top of a
  height-variable antenna tower was placed 3 meters far away from the turntable.
- 2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
- 4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
- 5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
- 6. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.
- 7. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. Antenna Requirements

#### 4.5.4 Limit

Except for special regulations, the Low-power Radio-frequency Devices must not be equipped with any jacket for installing an antenna with extension cable. An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited.

#### 4.5.5 Antenna Anti-Replacement Construction

An embedded-in antenna design is used.

(1) with antenna

Remark: 13.558 MHz is the NFC RF fundamental signal.

(2) with dummy load

Remark: Only the fundamental NFC signal needs to be retested per C63.4.

## Note:

- 1. 13.56 MHz is fundamental signal which can be ignored.
- 2. The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.
- 3. Distance extrapolation factor = 40 log (specific distance / test distance) (dB);
- 4. Limit line = specific limits ( $dB\mu V$ ) + distance extrapolation factor.

#### Note:

- 1. The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.
- 2. Emission level (dB $\mu$ V/m) = 20 log Emission level ( $\mu$ V/m).
- 3. Corrected Reading: Antenna Factor + Cable Loss + Read Level Preamp Factor= Level.
