

RF Exposure Evaluation Declaration

- FCC ID: Z9G-EDF201
- **Edifier International Limited Applicant:**
- **Product:** True Wireless Noise Cancellation Earbuds Headphones
- Model No.: EDF200117
- Brand Name: EDIFIER
- FCC Rule Part(s): FCC Part 2.1093
- **Result:** Complies

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standards through the calibration of the equipment and evaluated measurement uncertainty herein.

The test report shall not be reproduced except in full without the written approval of MRT Technology (Shenzhen) Co., Ltd.

1. General Information

1.1. Applicant

Edifier International Limited

P.O. Box 6264 General Post Office Hong Kong

1.2. Manufacturer

Beijing Edifier Technology Co., Ltd.

8th floor, ZuoAn Building, NO.68 BeiSiHuanXiLu, Haidian District, Beijing 100080, CHINA

1.3. Testing Facility

Test Site – MRT Suzhou Laboratory							
Laboratory Location (Suzhou - Wuzhong)							
D8 Building, No.2 Tian'edang Rd., Wuzhong Economic Development Zone, Suzhou, China							
Laboratory Location (Suzhou - SIP)							
4b Building, Liando U Valley, No.200 Xingpu Rd., Shengpu Town, Suzhou Industrial Park, China							
Laboratory Accre	editations						
A2LA: 3628.01		CNAS	5: L10551				
FCC: CN1166		ISED:	CN0001				
	□R-20025	□G-20034	C-20020	□T-20020			
VCCI:	□R-20141	□G-20134	C-20103	□T-20104			
Test Site – MRT Shenzhen Laboratory							
Laboratory Loca	tion (Shenzhen)						
1G, Building A, Ju	ınxiangda Building,	Zhongshanyuan Roa	d West, Nanshan Di	strict, Shenzhen,			
China							
Laboratory Accreditations							
A2LA: 3628.02 CNAS: L10551							
FCC: CN1284		ISED:	CN0105				
Test Site – MRT Taiwan Laboratory							
Laboratory Location (Taiwan)							
No. 38, Fuxing 2nd Rd., Guishan Dist., Taoyuan City 333, Taiwan (R.O.C.)							
Laboratory Accreditations

1.4. Product Information

Product	True Wireless Noise Cancellation Earbuds Headphones		
Model No.	EDF200117		
Bluetooth Specification	Bluetooth 5.3 (Dual Mode)		
Working Voltage (Earbuds)	Battery (3.85V DC)		
Antenna Information	Refer to Section 1.5		
Note:			
The information of EUT was provided by the manufacturer, and the accuracy of the information shall be the			

responsibility of the manufacturer.

1.5. Antenna Information

Frequency Range	2402~2480MHz
Antenna Type	Chip Antenna
Antenna Gain	Left Earbud Gain: -1.6dBi
	Right Earbud Gain: -3.0dBi

1.6. Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

• FCC Part 2.1093 & KDB 447498 D04 Interim General RF Exposure Guidance v01

1.7. Device Classification

According to the user manual, the device is classified as a Portable Device. So, the RF exposure evaluation requirements of § 2.1093 for portable device exposure conditions subject to MPE limits.

2. **RF Exposure Evaluation**

2.1. Limits

According to FCC §1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b)

Frequency Range	Electric Field	Magnetic Field	Power Density	Average Time			
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm ²)	(Minutes)			
	(A) Limits for Occupational/ Control Exposures						
0.3-3.0	614	1.63	*(100)	≤6			
3.0-30	1842/f	4.89/f	*(900/f ²)	<6			
30-300	61.4	0.163	1.0	<6			
300-1,500			f/300	<6			
1,500-100,000			5	<6			
(B) Limits for General Population/ Uncontrolled Exposures							
0.3-1.34	614	1.63	*(100)	<30			
1.34-30	824/f	2.19/f	*(180/f ²)	<30			
30-300	27.5	0.073	0.2	<30			
300-1,500			f/1500	<30			
1,500-100,000			1.0	<30			

Limite For Maximum	Dormicciblo	Exposuro	
Limits For Maximum	Permissible	Exposure	

f= frequency in MHz. * = Plane-wave equivalent power density.

2.2. MPE Exemptions

For single RF sources (i.e., any single fixed RF source, mobile device, or portable device, as defined in paragraph §1.1307(b)(2) of this section): A single RF source is exempt if:

(Option A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph §1.1307(b)(3)(ii)(A) of this section.

Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(ii)(A);

(Option B) Or the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). P is given by:

 $P th(mW) = \{ERP_{20cm}(d / 20cm)^{x} d \le 20cm\}$

 $P th(mW) = \{ERP_{20cm} \ 20cm < d \le 40cm \}$

Where

 $x = -\log_{10}\left(\frac{60}{ERP_{20}cm\sqrt{f}}\right)$ and f is in GHz;

and

 $ERP_{20cm}(mW) = \{2040f \ 0.3GHz \le f < 1.5GHz \\ ERP_{20cm}(mW) = \{3060 \ 1.5GHz \le f \le 6GHz \}$

(**Option C**) Or using Table 1 and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

RF Source Frequency (MHz)	Threshold ERP (watts)
0.3-1.34	1920R ²
1.34-30	3450R ² /f ²
30-300	3.83R ²
300-1,500	0.0128R ² f
1,500-100,000	19.2R ²

Table 1 to §1.1307(b)(3)(i)(C) - Single RF Sources Subject to Routine Environmental Evaluation

For multiple RF sources: Multiple RF sources are exempt if:

(A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is paragraph \$1.1307(b)(3)(i)(A) of this section. Medical implant devices may only use this exemption and that in paragraph \$1.1307(b)(3)(i)(A).

(B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

1.

Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph \$1.1307(b)(3)(i)(B) of this section for P_{th} , including existing exempt transmitters and those being added.

b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

*P*_i = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or

portable RF source *i* at a distance between 0.5 cm and 40 cm (inclusive).

 $P_{th,i}$ = the exemption threshold power (P_{th}) according to paragraph §1.1307(b)(3)(i)(B) of this section for fixed, mobile, or portable RF source *i*.

ERP_{*j*} = the ERP of fixed, mobile, or portable RF source *j*.

ERP_{th,j} = exemption threshold ERP for fixed, mobile, or portable RF source *j*, at a distance of at least $\lambda/2\pi$ according to the applicable formula of paragraph §1.1307(b)(3)(i)(C) of this section.

Evaluated_k = the maximum reported SAR or MPE of fixed, mobile, or portable RF source k either in the device or at the transmitter site from an existing evaluation at the location of exposure.

*Exposure Limit*_{*k*} = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source *k*, as applicable from §1.1310 of this chapter.

2.3. Calculation Result

Product	True Wireless Noise Cancellation Earbuds Headphones
Test Item	RF Exposure Evaluation

Test Mode	Frequency Range	Max. Conducted	Tune-up	Tune-up	SAR Test Exclusion
	(MHz)	Power or ERP	Conducted Power	Conducted Power	Threshold
		(dBm)	or ERP (dBm)	or ERP (mW)	(mW)
Bluetooth	2402 ~ 2480	2.44	3	2	2.77

Note 1: Tune-up tolerance was declared by manufacturer.

Note 2: The minimum distance between antenna and enclosure is 1mm. A distance of 5mm is applied to determine RF exposure exemption.

For single RF source, Option B

Therefore, the device qualifies for RF exposure exemption.
