Declaration for Limited Modular Approval

Nokia wishes to test the WiFi module installed into to the actual housing it will ultimately be used with (i.e. the host platform).

This will provide the associated product antennas with a consistent ground plane required for optimal performance. Additionally, the host platform housing will provide additional thermal benefits, allowing the product to operate within its thermal design margins during all testing.

To avoid confusion from previous programs in the strict interpretation of Section 15.31(i), we will classify this device under the Limited Modular Approval guidelines. Nokia understands that reuse of reports and data, etc. will be limited to configurations with this specific host platform series.

Please contact us with regard to any question(s) related to this declaration,

A handwritten signature in black ink, appearing to read "Terry Schwenk", is written over a horizontal line. Below the line, the word "(Signature)" is printed in a small, black, sans-serif font.
