Request for Tech. Info.: 03/07/05

Dear Mr. Lyles:

Submitted herewith is an amendment provided in response to the request for technical information dated March 7, 2005.

1. The black boxes are insulation tape to protect the unit from ESD.
2. Some points were deleted or moved on the board to improve the electrical and mechanical performance.
3. Both TCXO chips (Kyocera & SEM) use the same nominal frequency (19.12 MHz) and supply voltage (2.8 Vdc), and their pin-to-pin layouts are exactly the same. Therefore, the replacement TCXO chip is physically and electrically the same as the original chip.
4. In our initial response, we intended to say that the circuitry related to the TCXO has not been changed.

We trust this information is sufficient to resolve the FCC questions regarding this application. If you have any further questions, please do not hesitate to contact us.

Sincerely,

Steve Kim
General Manager
SAMSUNG Electronics America Inc.
