Federal Communications Commission  
7435 Oakland Mills Road  
Columbia, MD 21046

To whom it may concern:

Knox Company, hereby requests a Permissive Change Class II of the radio equipment certification for the Key Defender certification number, FCC ID: 2AOVI-KNOX-RAS. This product differs from the originally approved product in the following manor:

- (a) Associated digital circuitry. – no changes
- (b) Functional capabilities. – no changes
- (c) Antenna Characteristics. – The product uses internal antenna models Taoglas FXP840 or Laird CAF94505, both which have a peak gain less than the originally certified model which has an external antenna (Larsen NMO5E2400B).

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely,

*Bryan Pavlovic*
