

ConnectCore 6 Plus

Hardware Reference Manual

Revision history—90002278

Revision	Date	Description
G	August 2020	Revised MCA pinout comments, added MCA functionality note.
H	October 2021	Added safety instructions and UKCA labeling requirements.
J	December 2021	Listed new Bluetooth IDs.
K	January 2022	Add Japan certifications.
L	July 2022	Add additional FCC-approved antennas.

Customer support

Gather support information: Before contacting Digi technical support for help, gather the following information:

- Product name and model
- Product serial number (s)
- Firmware version
- Operating system/browser (if applicable)
- Logs (from time of reported issue)
- Trace (if possible)
- Description of issue
- Steps to reproduce

Contact Digi technical support: Digi offers multiple technical support plans and service packages. Contact us at +1 952.912.3444 or visit us at www.digi.com/support.

Feedback

To provide feedback on this document, email your comments to

techcomm@digi.com

Include the document title and part number (ConnectCore 6 Plus Hardware Reference Manual, 90002278 L) in the subject line of your email.

About the ConnectCore 6 Plus

The ConnectCore 6 Plus is an integrated platform solution with processor speed up to 1.2 GHz and pre-certified dual-band Wi-Fi (802.11a/b/g/n/ac) with Bluetooth 5.0 dual mode connectivity.

Cloud Connector integration, as part of the Digi Linux and Android software platform support, offers secure remote management and web services capabilities through Digi Remote Manager. Digi also offers custom Remote Manager hardware and wireless design services as well as end-to-end solutions for cloud integration and app development.

Note To serve our customers most effectively, Digi International Inc. is consolidating its cloud services, Digi Device Cloud and Digi Remote Manager®, under the Remote Manager name. This phased process does not affect device functionality or the functionality of the web services and other features. However, you will find instances of both Device Cloud and Digi Remote Manager in some documentation, firmware, and user interfaces.

Features and functionality

The ConnectCore 6 Plus module is based on the i.MX6QP processor from NXP. This processor offers a high number of interfaces. Most of these interfaces are multiplexed and are not available simultaneously. The module has the following features:

- i.MX6QP ARM Cortex-A9 cores operating at speed up to 1.0 GHz
 - 32 Kbytes L1 instruction cache
 - 32 Kbytes L1 data cache
 - Up to 1 MB unified instruction/data L2 cache
 - NEON MPE (Media Processing Engine) co-processor
- Graphical hardware accelerators:
 - IPU (Image Processing Unit)
 - VPU (Video Processing Unit)
 - 3D GPU (Graphics Processing Unit) version 6
 - 2D GPU (Graphics Processing Unit) version 3
 - GPU (OpenVG 1.1 Graphics Processing Unit)
 - Prefetch and resolve engine
 - Prefetch and resolve gasket
 - ASRC (Asynchronous Sample Rate Converter)
- 64-bit DDR3-1066 memory interface with a density up to 2 GBytes
- 8-bit eMMC support
- Dialog DA9063 power management IC (PMIC)
 - 6x DC/DC buck converters
 - 11x LDO regulators
 - RTC with rechargeable coin cell battery support
 - 10-bit ADC channels
 - GPIO pins
- IEEE 802.11 a/b/g/n/ac WLAN interface
- Bluetooth version 4.2 dual mode
- Cortex-M0+/Cortex-M4 MCA (Microcontroller Assist) subsystem
- Debug interfaces:
 - Standard JTAG controller IEEE 1149.1
 - ETM/ETB support

- Support of i.MX6QP typical interfaces:
 - 16/32-bit data/address bus
 - SATA II, 3.0 Gbps (24-bit parallel bus, LVDS, HDMI, MIPI/DSI)
 - Display support
 - HDMI
 - 24-bit parallel bus
 - Dual LVDS
 - MIPI/DSI
 - 2x camera (20-bit parallel bus, MIPI/CSI)
 - MMC/SD/SDIO
 - 1x USB OTG with integrated PHY
 - 3x USB Host
 - PCI Express Gen 2.0 lane
 - 10/100/1000 M Ethernet MAC
 - UART, SPI, I2C, PWM, CAN, I2S and GPIO
- Ultra-miniature SMT module (50x50mmx5mm) based on 400-LGA pads
- Security accelerators:
 - ARM TrustZone
 - CAAM (Cryptographic Acceleration and Assurance Module)
 - SNVS (Secure Non-volatile Storage)
 - CSU (Central Security Unit)
 - A-HABv4 (Advanced High-assurance Boot)

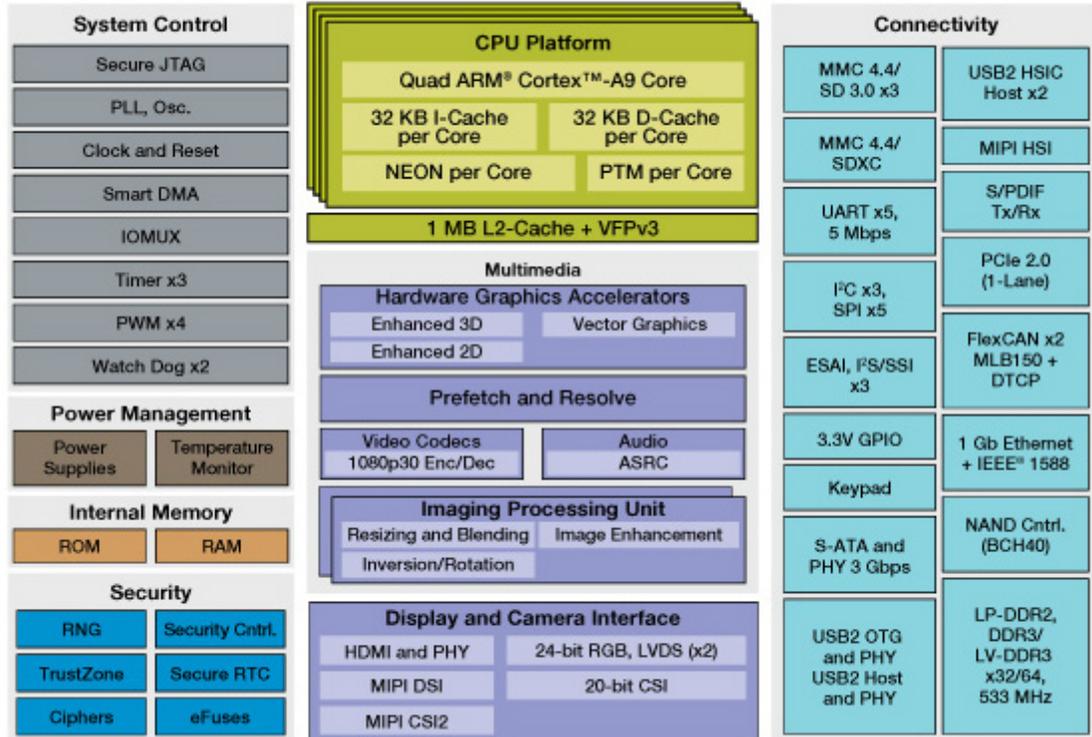

Safety instructions

- The ConnectCore 6 Plus module cannot be guaranteed operation due to the radio link and so should not be used for interlocks in safety critical devices such as machines or automotive applications.
- The ConnectCore 6 Plus module has not been approved for use in (this list is not exhaustive):
 - nuclear applications
 - explosive or flammable atmospheres
- There are no user serviceable components inside the ConnectCore 6 Plus module. Do not remove the shield or modify the ConnectCore 6 Plus in any way. Modifications may exclude the module from any warranty and can cause the ConnectCore 6 Plus to operate outside of regulatory compliance for a given country, leading to the possible illegal operation of the radio.
- Use industry standard ESD protection when handling the ConnectCore 6 Plus module.
- Take care while handling to avoid electrical damage to the PCB and components.
- Do not expose ConnectCore 6 Plus modules to water or moisture.
- Use this product with the antennas specified in the ConnectCore 6 Plus module user guides.

- The end user must be told how to remove power from the ConnectCore 6 Plus module or to locate the antennas 20 cm from humans or animals.

Block diagram

The figure below shows the block diagram of the NXP i.MX6QP application processor.

Power supply architecture

The ConnectCore 6 Plus provides a primary 5 V power supply input. This supply is the main power domain to the on-module Dialog DA9063 power management IC (PMIC), which generates all required supply voltages for the module components as well as the carrier board.

The module provides support for a backup battery (coin-cell or super cap) powering the real-time clock (RTC) on the module. In addition, rechargeable backup batteries (ML414, others) are also supported.

The PMIC generates the following power domains that are available on the module pads:

- One PMIC switching regulator:
 - VGEN_3V3
- Five PMIC LDO:
 - VLDO2
 - VLDO3_MCA

- VLDO4
- VLDO6
- VLDO8
- VDD_SD2
- VDD_WLAN_SD1

Signal name	PMIC regulator	Output voltage	Output accuracy	Maximum current	Dropout voltage (MAX)	Turn on time (MAX)	Turn off time (MAX)	Quiescent current in OFF mode (TYP)
VGEN_3V3	BUCKPERI	3.3 V	+/-3%	1500 mA	-	1 μ A	1.2 ms	-

Note The maximum current consumption mentioned in the previous table is a combination of the current consumed by the module (max 500 mA) and by the carrier board for external use (1000 mA).

The table below provides the characteristics of the optional LDO outputs:

Signal name	PMIC regulator	Output voltage	Output accuracy	Default voltage	Maximum current	Drop output voltage (MAX)	Quiescent current in OFF mode (TYP)
VLDO2	LDO2	0.6-1.86 V	+/-3%	1.8 V	200 mA	150 mV	1 μ A
VLDO3_MCA	LDO3	0.9-3.44 V	+/-3%	3.3 V	200 mA	150 mV	1 μ A
VLDO4	LDO4	0.9-3.44 V	+/-3%	3.3 V	200 mA	150 mV	1 μ A
VLDO6	LDO6	0.9-3.6 V	+/-3%	3.3 V	200 mA	150 mV	1 μ A
VLDO8	LDO8	0.9-3.6 V	+/-3%	3.3 V	200 mA	150 mV	1 μ A
VDD_SD2	LDO9	0.95 - 3.6 V	+/-1%	3.3 V	200 mA	150 mV	1 μ A
VDD_WLAN_SD1	LDO10	0.9 - 3.6 V	+/-3%	3.3 V	300 mA	150 mV	1 μ A

Signal name	Turn on time (MAX)	Turn off time (MAX)
VLDO2	150 μ s	1 ms
VLDO3_MCA	300 μ s	1 ms
VLDO4	300 μ s	1 ms
VLDO6	200 μ s	1 ms

Signal name	Turn on time (MAX)	Turn off time (MAX)
VLDO8	300 μ s	1 ms
VDD_SD2	200 μ s	1 ms
VDD_WLAN_SD1	200 μ s	1 ms

Note For information about using the LDO options, contact Digi. VLDO3 is used for supplying MCA processor on the module.

The power management IC located on the module is responsible for generating all required i.MX6QP processor supply voltages. The following i.MX6QP supplies are available on the module pads:

- NVCC_ENET
- NVCC_EIM
- NVCC_LCD
- NVCC_CSI
- NVCC_RGMII

Some of the I/O supplies are set on the module. See the following table:

Power domain	Connection
NVCC_GPIO	VGEN_3V3
NVCC_JTAG	VGEN_3V3
NVCC_NANDF	VGEN_3V3
NVCC_SD1	VDD_WLAN_SD1
NVCC_SD2	VDD_SD2
NVCC_SD3	VGEN_3V3
PCIE_VPH	2.5V (VDDHIGH_CAP_2V5)

The remaining I/O voltages must be set externally and are left open on the ConnectCore 6 Plus module. See the following table for operating ranges of the remaining I/O supplies.

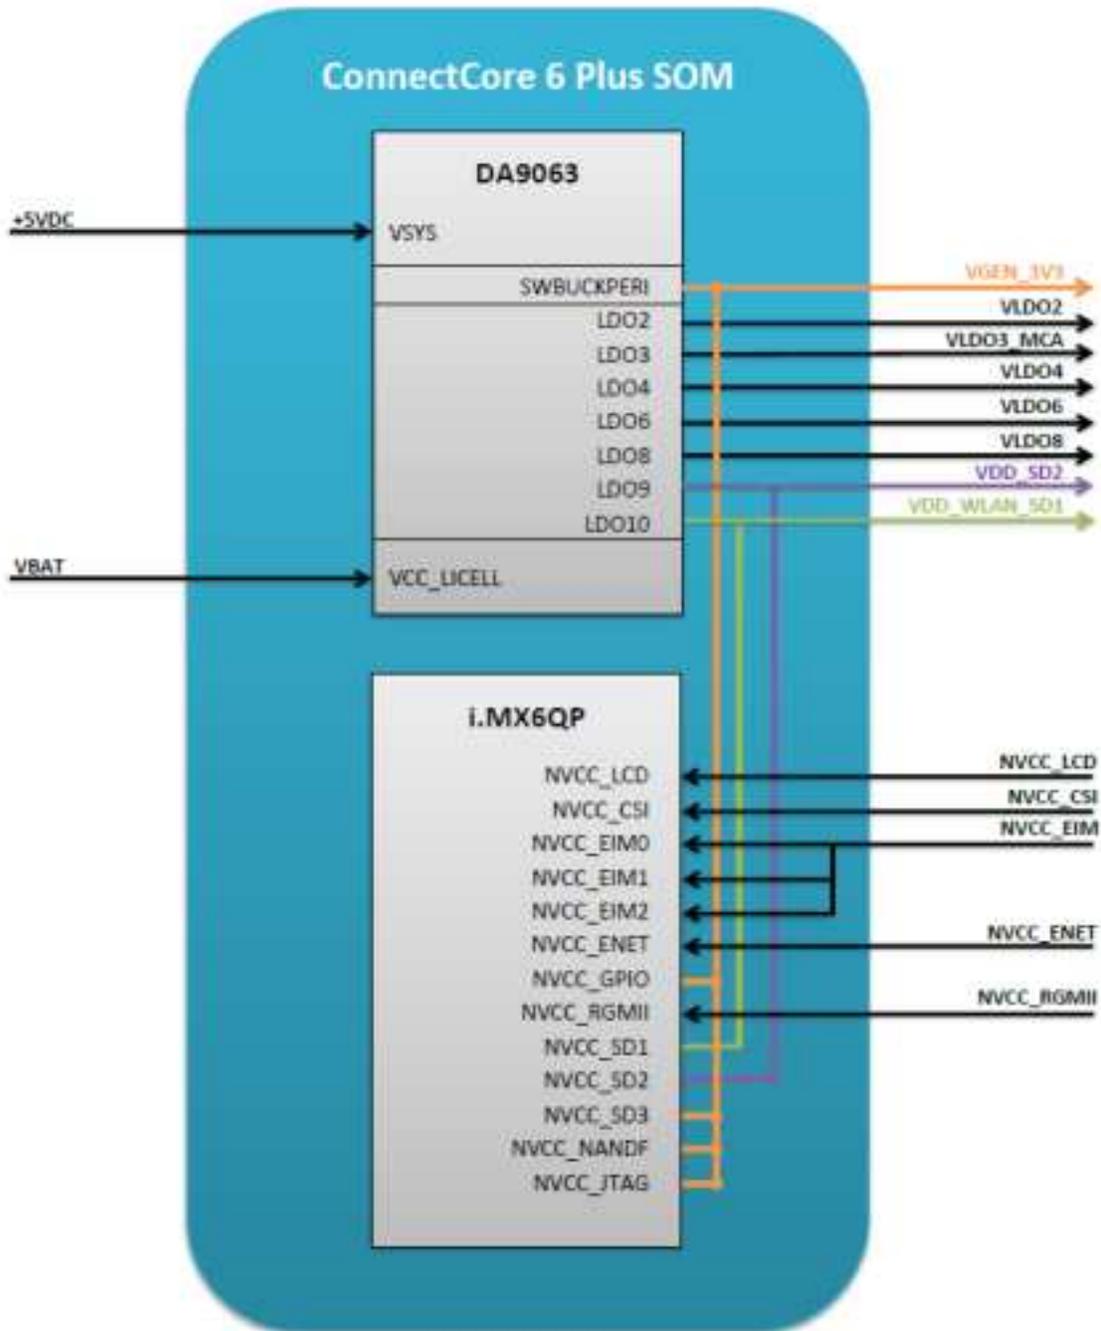

Power domain	Min	Typical	Max
NVCC_ENET	1.8 V	2.5 V	3.3 V
NVCC_EIM	1.8 V	2.5 V	3.3 V
NVCC_LCD	1.8 V	2.5 V	3.3 V
NVCC_CSI	1.8 V	2.5 V	3.3 V
NVCC_MIPI	2.25 V	2.5 V	3.3 V

Power domain	Min	Typical	Max
NVCC_RGMII in HSIC 1.2 V mode	1.15 V	-	1.30 V
NVCC_RGMII in RGMII 1.5 V mode	1.43 V	-	1.58 V
NVCC_RGMII in RGMII 1.8 V mode	1.70 V	-	1.90 V
NVCC_RGMII in RGMII 2.5 V mode	2.25 V	-	2.625 V

As shown in the table above, the supplies have a wide operating range. To provide the most cost-effective and flexible solution for a given use case, the carrier board integrating the ConnectCore 6 Plus module must provide the supplies listed in the table. But note that PMIC power domains 3.3 V— and LDO2/3/4/6/8 options—are dedicated power sources for supplying i.MX6QP power domains.

The MCU-assist-specific power domain (VLDO3_MCA) available on the ConnectCore 6 Plus LGA pads is a power supply output that powers the on-module Kinetis processor.

The following diagram outlines the ConnectCore 6 Plus power supply.

Bootstrap

The ConnectCore 6 Plus module can be configured to boot from different devices and interfaces determined by the boot ROM. The configuration of the CPU booting process is done through:

- BOOT_MODE register, which selects the boot mode of the processor
- eFUSES and/or GPIOs, which determine the boot configuration

Four boot modes are available on the i.MX6QP processor. Selection between them is done through BOOT_MODE[1:0] bits. The bits are externally configurable on two processor IOs, whose values are latched during boot-up:

BOOT_MODE [1:0]	Boot type
00	Boot from fuses
01	Serial downloader
10	Internal boot (default)
11	Reserved

BOOT_MODE[0] and BOOT_MODE[1] are available on dedicated pads on the module.

Note BOOT_MODE[1:0] is set internally to [10] through 10K pull-up and 10K pull-down resistors. So, by default, the SOM is configured to internal boot.

Boot from fuses

Boot from fuses is the recommended boot mode for production purposes. When this boot mode is selected, you must configure several parameters in order to select and configure the system boot device. These parameters are configured through fuses, which are burned in order to set their values.

CAUTION! A boot-from-fuses configuration is irreversible.

BOOT_CFG1 register selects the boot device through BOOT_CFG1[7:4] bits:

BOOT_CFG1[7:4]	Boot device
0000	NOR/OneNAND (EIM)
0001	Reserved
1xxx	Raw NAND
0010	SSD/Hard Disk (SATA)
010x	SD/eSD/SDXC
0011	Serial ROM (I2C/SPI)
011x	MMC/eMMC

There are many other registers that configure the different boot devices. For a complete description of the booting configuration, refer to the *NXP i.MX6QP Applications Processor Reference Manual (Chapter 8: System Boot)*.

Internal Boot

Internal boot is the recommended boot mode for development purposes. When this boot mode is selected, the selection and configuration of the booting process is done through the same registers used when booting from fuses. However, this time the values of some registers are overridden using multiple GPIOs—which are latched during power-up.

The following configuration is done internally in the ConnectCore 6 Plus module to enable booting from the internal eMMC memory:

Bootstrap register bit	Corresponding GPIO	Default configuration
BOOT_CFG1[4]	EIM_DA4	10K pull-down
BOOT_CFG1[5]	EIM_DA5	10K pull-up
BOOT_CFG1[6]	EIM_DA6	10K pull-up
BOOT_CFG1[7]	EIM_DA7	10K pull-down
BOOT_CFG2[3]	EIM_DA11	10K pull-up
BOOT_CFG2[4]	EIM_DA12	10K pull-up
BOOT_CFG2[5]	EIM_DA13	10K pull-down
BOOT_CFG2[6]	EIM_DA14	10K pull-up

By default, the system is configured to boot from MMC/eMMC (BOOT_CFG1[7:5] = 011). You can externally change the configuration of these lines to select between different boot devices. To see a detailed implementation of the boot configuration, check the ConnectCore 6 Plus carrier board reference design.

Make sure that the following signals are not pulled high during boot:

- EIM_EB3 (pad AA18)
- EIM_A18 (pad AB15)
- EIM_A20 (pad AB16)
- EIM_A21 (pad AC16)

Pulling these lines up during booting will prevent the system from booting.

Wireless interfaces

The ConnectCore 6 Plus system-on-module combines a wireless local area network (WLAN) and Bluetooth dual solution to support IEEE802.11 a/b/g/n/ac WLAN standards and Bluetooth 5.0, enabling integration of WLAN/Bluetooth and Low Energy technology.

The following sections include specifications for the wireless interfaces available on the i.MX6QP module.

WLAN IEEE 802.11a/b/g/n/ac

The 2.4 GHz band on the ConnectCore 6 Plus module supports 20/40 MHz bandwidths, and the 5 GHz band supports 20/40/80 MHz bandwidths.

The following sections specify the performance of the WLAN IEEE 802.11a/b/g/n/ac interface on the ConnectCore 6 Plus module.

Modulation and data rates

The following tables list modulation values for ConnectCore 6 Plus module supports the following WLAN standards.

Mode	Modulation & coding	Rate
802.11b	DBPSK	1 Mbps
	DQPSK	2 Mbps
	CCK	5.5 Mbps
	CCK	11 Mbps
802.11ga	BPSK-1/2	6 Mbps
	BPSK-3/4	9 Mbps
	QPSK-1/2	12 Mbps
	QPSK-3/4	18 Mbps
	16QAM-1/2	24 Mbps
	16QAM-3/4	36 Mbps
	64QAM-2/3	48 Mbps
	64QAM-3/4	54 Mbps
802.11n	BPSK-1/2	MCS0
	QPSK-1/2	MCS1
	QPSK-3/4	MCS2
	16QAM-1/2	MCS3
	16QAM-3/4	MCS4
	64QAM-2/3	MCS5
	64QAM-3/4	MCS6
	64QAM-5/6	MCS7

Mode	Modulation & coding	Rate
802.11ac	BPSK-1/2	MCS0
	QPSK-1/2	MCS1
	QPSK-3/4	MCS2
	16QAM-1/2	MCS3
	16QAM-3/4	MCS4
	64QAM-2/3	MCS5
	64QAM-3/4	MCS6
	64QAM-5/6	MCS7
	256QAM-3/4	MCS8
	256QAM-5/6	MCS9

Data rate (Mbps) - Non Short Guard Interval (Non-SGI)

Data rate (Mbps)		802.11b		802.11ga		802.11n		802.11ac

	80 MHz	802.11ac	11 (MCS0) - 4 (MCS9)

Note See [Regulatory information and certifications](#) for further details about available RF channels and their maximum transmit power.

Note Due to manufacturing tolerance, these nominal output powers may be reduced up to 3 dB.

Bluetooth

The ConnectCore 6 Plus module supports both Bluetooth and Bluetooth Low Energy protocols:

- Bluetooth 5.0; backwards compatible with Bluetooth 1.X, 2.X + Enhanced Data Rate, Bluetooth 3.X, 4.0, 4.1, and 4.2 Bluetooth class 1 and class 2 power-level transmissions
- Integrated WLAN-Bluetooth coexistence

Note See [Bluetooth SIG-qualified hardware and firmware](#) for more information.

MCA hardware

Note Digi provides hardware connectivity between the on-module MCA and the main processor. Additional software development is required to implement MCA functionality.

Supported devices

The ConnectCore 6 Plus module is designed to support a Kinetis processor in a QFN48 package. See below for a list of compatible Kinetis processors that can be used in this package size:

- MKL14Z32VFT4
- MKL14Z64VFT4
- MKL15Z128VFT4
- MKL15Z32VFT4

- MKL15Z64VFT4
- MKL24Z32VFT4
- MKL24Z64VFT4
- MKL25Z128VFT4
- MKL25Z32VFT4
- MKL25Z64VFT4
- MKL26Z128VFT4
- MKL26Z64VFT4
- MKL26Z32VFT4
- K10P48M50SF0
- K20P48M50SF0

By default, NXP MKL14Z32VFT4 is populated on the module variants supporting the MCA unit.

MCA pinout

The table below contains the pinouts for the MCA unit on the ConnectCore 6 Plus module.

Note The pinout information assumes you are using the NXP MKL14Z32VFT4 microcontroller. Using a different Kinetis microcontroller may change the functions available on the MCA pins.

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
1	VDD	-	LDO3_MCA	MCA power supply 1x 100 nF + 1x1 µF capacitors connected to GND are placed close to this pin on the ConnectCore 6 Plus SOM.
2	VSS	-	GND	MCA ground
3	ADC0_SE1 PTE16 SPI0_PCS0 UART2_TX TPM_CLKIN0 - - -	N20	MCA_IO/USB0_P	For KL24, KL25 and K20 processors, this pin is USB0_DP. MCA_IO/USB0_P (N20) and MCA_IO/USB0_N (P20) have been routed as a differential pair for supporting USB functionality on KL24, KL25 and K20 processors.
4	ADC0_SE5a PTE17 SPI0_SCK UART2_RX TPM_CLKIN1 - LPTMR0_ALT3 -	P20	MCA_IO/USB0_N	For KL24, KL25 and K20 processors, this pin is USB0_DN. MCA_IO/USB0_P (N20) and MCA_IO/USB0_N (P20) have been routed as a differential pair for supporting USB functionality on KL24, KL25 and K20 processors.
5	ADC0_SE2 PTE18 SPI0_MOSI - I2C0_SDA SPI0_MISO - -	Y22	MCA_IO27	For KL24 and K20 processors, this pin is VOUT33. The ConnectCore 6 Plus SOM has a 0R resistor on this pin for connecting this signal to LDO3_MCA. By default, the resistor is not populated and MCA_IO27 is available on the module pad.
6	ADC0_SE6a PTE19 SPI0_MISO - I2C0_SCL SPI0_MOSI - -	P21	MCA_IO14	

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
7	ADC0_SE0 PTE20 - TPM1_CH0 UART0_TX - - -	T23	MCA_IO0	
8	ADC0_SE4a PTE21 - TPM1_CH1 UART0_RX - - -	P23	MCA_IO1	
9	VDDA	-	LDO3_MCA	MCA power supply. A 100 nF capacitor connected to GND is placed close to this pin on theConnectCore 6 Plus SOM.
10	VREFH	AC10	MCA_VREFH	A 100 nF capacitor connected to GND is placed close to this pin on theConnectCore 6 Plus SOM.
11	VREFL	-	GND	MCA ground
12	VSSA	-	GND	MCA ground
13	CMP0_ IN5/ADC0_ SE4b PTE29 - TPM0_CH2 TPM_CLKIN0 - - -	Y23	MCA_IO23	
14	ADC0_ SE23/CMP0_ IN4 PTE30 - TPM0_CH3 TPM_CLKIN1 - - -	-	-	This MCA pin is connected to the gate of an N-channel MOSFET. A 10 K pull-down resistor is connected to GND on this signal too. The drain of the MOSFET is connected to theConnectCore 6 Plus signal ON/OFF (pad D18). The source of the MOSFET is connected to GND. This signal is reserved on the module and allows MCA to control ON/OFF signal over software.
15	-	-	KINETIS_32K	This MCA pin is connected to 32K output of the

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
	PTE24 - TPM0_CH0 - I2C0_SCL - -			PMIC, which is the clock input of the MCA processor.
16	- PTE25 - TPM0_CH1 - I2C0_SDA - -	AC21	MCA_IO28	For K10 and K20 processors, this pin is VBAT. The ConnectCore 6 Plus SOM has a 0R resistor on this pin for connecting this signal to LDO3_MCA. By default, the resistor is not populated and MCA_IO28 is available on module pad. 1x 100 nF + 1x1 µF capacitors connected to GND are placed close to this pin on ConnectCore 6 Plus SOM.
17	- PTA0 - TPM0_CH5 - - - SWD_CLK	L23	MCA_SWD_CLK	
18	- PTA1 UART0_RX TPM2_CH0 - - - -	AA22	MCA_IO25	
19	- PTA2 UART0_TX TPM2_CH1 - - - -	AA23	MCA_IO6/PMIC_GP_FB2	Connected on ConnectCore 6 Plus SOM to PMIC signal GP_FB2.
20	- PTA3 I2C1_SCL TPM0_CH0 - - -	M23	MCA_SWD_DIO	

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
	SWD_DIO			
21	- PTA4 I2C1_SDA TPM0_CH1 - - - NMI_b	AA21	MCA_IO26	
22	VDD	-	LDO3_MCA	MCA power supply 1x 100 nF + 1x1 µF capacitors connected to GND are placed close to this pin on ConnectCore 6 Plus SOM.
23	VSS	-	GND	MCA ground
24	EXTAL0 PTA18 - UART1_RX TPM_CLKIN0 - - -	-	PMIC_STBY_REQ	Connected on ConnectCore 6 Plus SOM to i.MX6QP processor signal PMIC_STBY_REQ (ball F11) and PMIC signal SYS_EN/GPIO8 (ball B9).
25	XTAL0 PTA19 - UART1_TX TPM_CLKIN1 - LPTMR0_ALT1 -	T20	MCA_IO24	
26	RESET_b PTA20	N23	#MCA_RESET	
27	ADC0_SE8 PTB0/LLWU_ P5 I2C0_SCL TPM1_CH0 - - - -	R23	MCA_IO2	
28	ADC0_SE9 PTB1 I2C0_SDA	H21	NANDF_ CS1/#MCA_INT	Connected to i.MX6QP processor signal NANDF_CS1 (ball C16).

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
	TPM1_CH1 - - -			
29	ADC0_SE12 PTB2 I2C0_SCL TPM2_CH0 - - -	-	INTERNAL_I2C_SCL	Connected directly to PMIC I2C_SCL signal and to i.MX6QP processor I2C2_SCL/KEY_COL3 signal (ball U5) over N-channel MOSFET.
30	ADC0_SE13 PTB3 I2C0_SDA TPM2_CH1 - - -	-	INTERNAL_I2C_SDA	Connected directly to PMIC I2C_SDA signal and to i.MX6QP processor I2C2_SDA/KEY_ROW3 signal (ball T7) over N-channel MOSFET.
31	- PTB16 SPI1_MOSI UART0_RX TPM_CLKIN0 SPI1_MISO - -	N22	MCA_IO7	
32	- PTB17 SPI1_MISO UART0_TX TPM_CLKIN1 SPI1_MOSI - -	P22	MCA_IO8	
33	ADC0_SE14 PTC0 - EXTRG_IN - CMP0_OUT - -	U24	MCA_IO4	

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
34	ADC0_SE15 PTC1/LLWU_ P6/RTC_CLKIN I2C1_SCL - TPM0_CH0 - - -	-	KINETIS_32K	This MCA pin is connected to 32K output of the PMIC. For KL14, KL15, KL24 and KL25 this pin can be configured as RTC_CLKIN signal.
35	ADC0_SE11 PTC2 I2C1_SDA - TPM0_CH1 - - -	R22	MCA_IO9	
36	- PTC3/LLWU_ P7 - UART1_RX TPM0_CH2 CLKOUT - -	T22	MCA_IO10	
37	- PTC4/LLWU_ P8 SPI0_PCS0 UART1_TX TPM0_CH3 - - -	U22	MCA_IO11	
38	- PTC5/LLWU_ P9 SPI0_SCK LPTMR0_ALT2 - - CMP0_OUT -	M21	MCA_IO12	
39	CMP0_IN0 PTC6/LLWU_	N21	MCA_IO13	

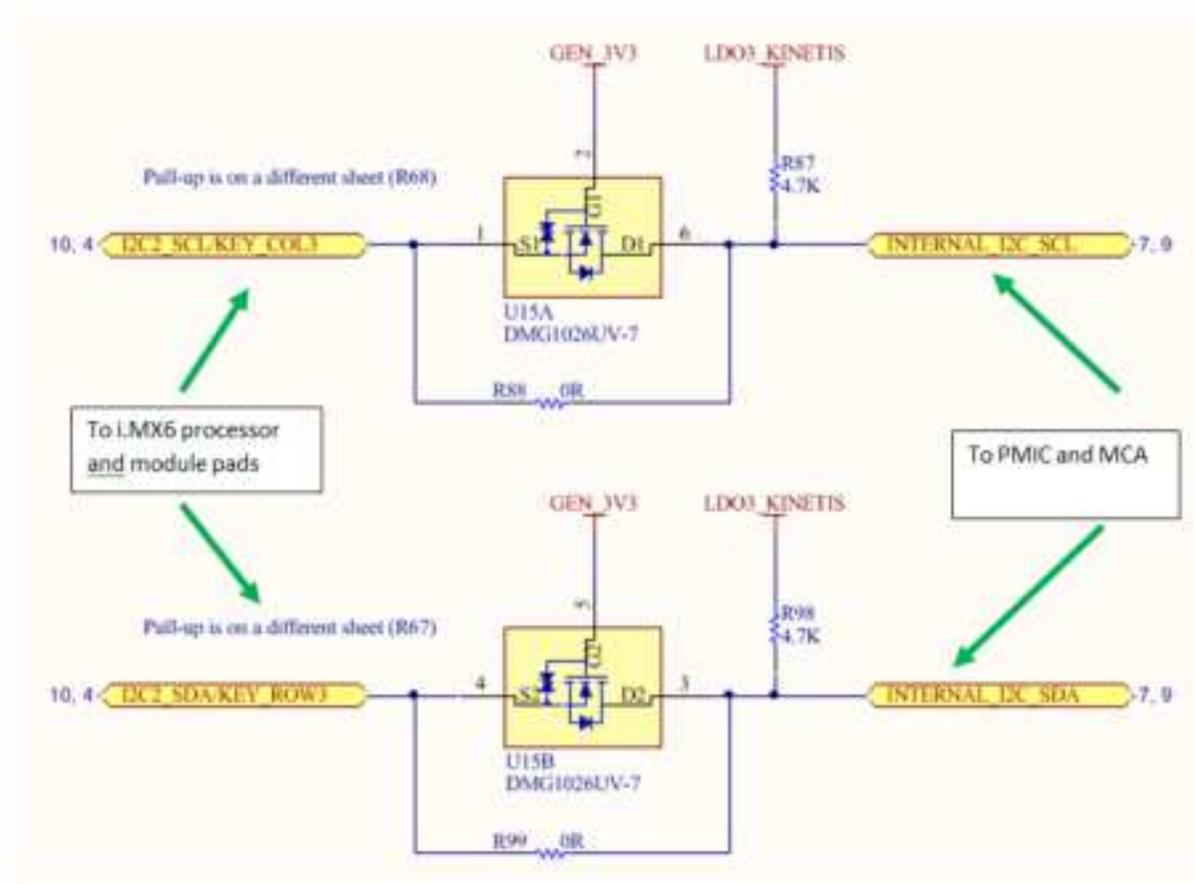

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
	P10 SPI0_MOSI EXTRG_IN - SPI0_MISO - -			
40	CMP0_IN1 PTC7 SPI0_MISO - - SPI0_MOSI - -	R20	MCA_IO19	
41	- PTD0 SPI0_PCS0 - TPM0_CH0 - - -	A6	CSIO_ DAT11/ECSPI2_ SS0	Connected to i.MX6QP processor signal CSIO_ DAT11 (ball M3) and to LGA pad A6. This pin can be configured as a SPI chip select shared between MCA and i.MX6QP processor.
42	ADC0_SE5b PTD1 SPI0_SCK - TPM0_CH1 - - -	D6	CSIO_ DAT8/ECSPI2_ SCLK	Connected to i.MX6QP processor signal CSIO_ DAT8 (ball N6) and to LGA pad D6. This pin can be configured as a SPI clock shared between MCA and i.MX6QP processor.
43	- PTD2 SPI0_MOSI UART2_RX TPM0_CH2 SPI0_MISO - -	K5	CSIO_ DAT10/ECSPI2_ MISO	Connected to i.MX6QP processor signal CSIO_ DAT10 (ball M1) and to LGA pad K5. This pin can be configured as a SPI MISO shared between MCA and i.MX6QP processor.
44	- PTD3 SPI0_MISO UART2_TX TPM0_CH3 SPI0_MOSI -	D5	CSIO_ DAT9/ECSPI2_ MOSI	Connected to i.MX6QP processor signal CSIO_ DAT9 (ball N5) and to LGA pad D5. This pin can be configured as a SPI MOSI shared between MCA and i.MX6QP processor.

MCA		ConnectCore 6 Plus		
Pin Nr	Signal name	Pad Nr	Signal name	Usage on module
	-			
45	- PTD4/LLWU_P14 SPI1_PCS0 UART2_RX TPM0_CH4 - - -	R21	MCA_IO16	
46	ADC0_SE6b PTD5 SPI1_SCK UART2_TX TPM0_CH5 - - -	T21	MCA_IO22	
47	ADC0_SE7b PTD6/LLWU_P15 SPI1_MOSI UART0_RX - SPI1_MISO - -	T24	MCA_IO3	
48	- PTD7 SPI1_MISO UART0_TX - SPI1_MOSI - -	AA20	MCA_IO21	

The i.MX6QP pads listed above are connected to ConnectCore 6 Plus pads. If the MCA microcontroller firmware doesn't use these signals, they are available on the carrier board and can be used in any of the alternative functions listed above.

Shared I2C bus

The screenshot below shows how the I2C bus (I2C2) is used on ConnectCore 6 Plus module. The bus is shared between i.MX6QP processor and the PMIC, the MCA, and the cryptochip. The usage of N-channel MOSFET ensures the bus is fully isolated and allows the i.MX6QP processor to be shut off while MCA and PMIC are powered.

Shared SPI bus

In addition to an I2C interface, i.MX6QP shares an SPI bus with the MCA microcontroller. The table below shows this connection:

SPI function	i.MX6QP pad	MCA I/O
SPI Chip Select	CSIO_DAT11 (ConnectCore 6 Plus LGA pad A6): Alt0: IPU1_CSI0_DATA11 Alt1: AUD3_RXFS Alt2: ECSPI2_SS0 Alt3: UART1_RX_DATA Alt4: - Alt5: GPIO6_IO03 Alt6: - Alt7: ARM_TRACE14	PTD0 (MCA pin 41): Alt0: - Alt1: PTD0 Alt2: SPI0_PCS0 Alt3: - Alt4: - Alt5: TPM0_CHO Alt6: - Alt7: -

CryptoAuthentication device

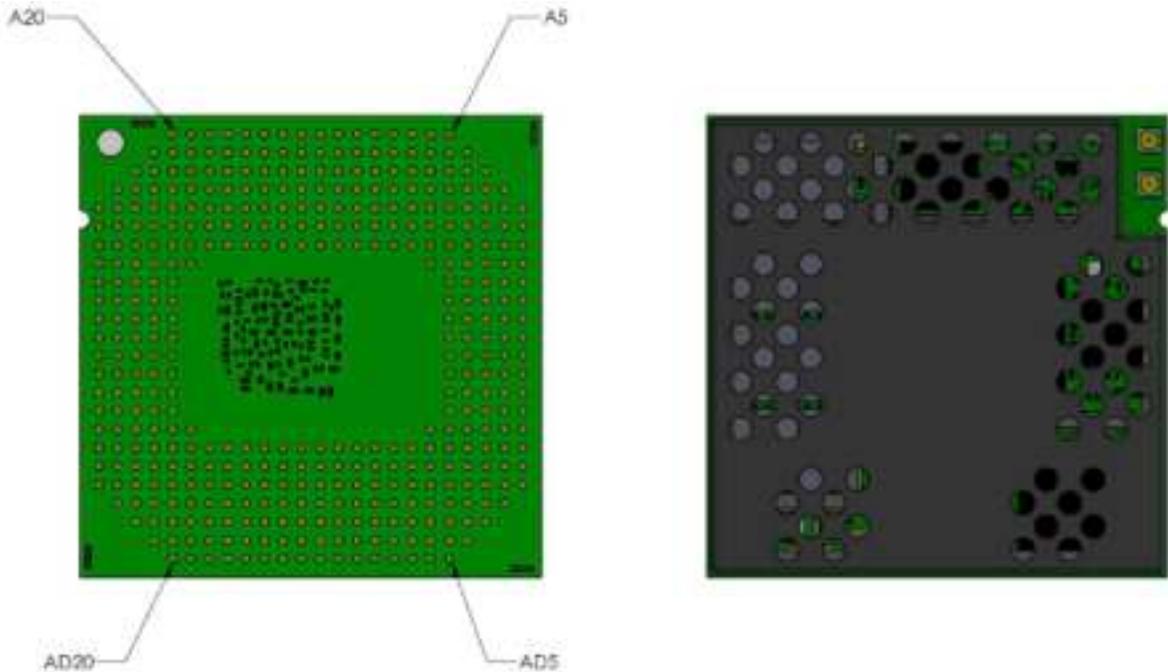

The ConnectCore 6 Plus includes an Atmel CryptoAuthentication Device. This is a highly secure cryptographic co-processor with secure hardware-based key storage. It includes the following features:

- Performs high-speed public key (PKI) algorithms (ECDSA and ECDH).
- NIST standard P256 elliptic curve support.
- SHA-256 hash algorithm with HMAC option.
- 256-bit key length.
- Storage for up to 16 keys.
- Two high-endurance monotonic counters.
- Guaranteed unique 72-bit serial number.
- Internal High-quality FIPS Random Number Generator (RNG).
- 10 Kb EEPROM memory.

See the [software documentation](#) for information about supported cryptoauthentication features.

Module pinout

The module has an LGA pad structure based on 400 pads. See the following diagram for the general layout, which shows the top view of the module pinouts.

The following table provides the pinout of the ConnectCore 6 Plus module.

Additional timing and electrical information can be found in either the NXP i.MX6QP processor datasheet (www.nxp.com) or the Dialog DA9063 product datasheet (www.dialog-semiconductor.com).

The microprocessor used on this module, like all CMOS devices, can be driven into a latch-up condition if any I/O pin is driven outside of its associated power rail. Care must be taken to:

- Never drive an I/O pin beyond its positive rail or below ground.
- Never drive an I/O pin from an external power source during the power-on or reset sequences.
- Never hot-swap the module or interrupt its ground connection to external circuitry.

Latch-up is a condition that can cause excessive current draw and result in excessive heating of the microprocessor or its power supplies. This excessive heating can permanently damage the microprocessor and/or its supporting components.

Pinout differences between ConnectCore 6 and ConnectCore 6 Plus

The following table lists the details of pinout differences between the ConnectCore 6 and the ConnectCore 6 Plus:

Pad	ConnectCore 6	ConnectCore 6 Plus	Comments
C18	Unconnected	PCM_IN	PCM bus coming from the wireless transceiver used on the ConnectCore 6 Plus.
D12	Unconnected	PCM_OUT	PCM bus coming from the wireless transceiver used on the ConnectCore 6 Plus.
E12	Unconnected	PCM_SYNC	PCM bus coming from the wireless transceiver used on the ConnectCore 6 Plus.
E13	Unconnected	PCM_CLK	PCM bus coming from the wireless transceiver used on the ConnectCore 6 Plus.
AA11	VGEN7_1V8	VGEN2_1V8	This 1.8V supply is generated by LDO7 on ConnectCore 6 and by LDO2 on ConnectCore 6 Plus. LDO2 was necessary on ConnectCore 6 for supplying portion of the wireless interface. This supply was not required with the new wireless solution used on ConnectCore 6 Plus and hence has been reassigned to generate 1.8V.
AB11	Unconnected	VDD_WLAN_SDIO	VDD_WLAN_SDIO is generated by PMIC LDO10. This supply powers the SDIO interface going to the wireless transceiver. It powers the i.MX 6 Plus I/O bank and the I/O supply of the RF transceiver. On the ConnectCore 6, no dedicated power supply has been used for powering the SDIO interface.
AC11	Unconnected	VDD_SDIO	VDD_SDIO is generated by PMIC LDO9. This supply is used on the module for powering SD2 interface. On ConnectCore 6, SD2 is connected to VGEN_3V3 and has no dedicated power supply.

Signal use limitations

The following signals available on ConnectCore 6 Plus pads have a limited usage:

- SD1_CLK (pad L21), SD1_CMD (pad J23), SD1_DAT[3:0] (pads L20, J21, J22 and N24) are used internally by the wireless, so they can't be used externally.
- SD3_DAT4/BT_UART_RXD (pad C22), SD3_DAT5/BT_UART_TXD (pad D23), SD3_CLK/BT_UART_RTS (B21), SD3_CMD/BT_UART_CTS (pad E23) are used internally by the Bluetooth, so they can't be used externally.
- I2C2_SCL/KEY_COL3 (pad C3) and I2C2_SDA/KEY_ROW3 (pad F2) are used internally in the module for interconnecting the CPU with the PMIC, the MCA, and the cryptochip. Using these signals externally should be done with caution, since it could prevent the module from working properly. It is recommended that you use another I2C port for connecting external devices to the ConnectCore 6 Plus module in order to avoid excessive bus load.
- NANDF_CS1/#MCA_INT (pad H21), CSIO_DAT11/ECSPI2_SS0 (pad A6), CSIO_DAT8/ECSPI2_SCLK (pad D6), CSIO_DAT10/ECSPI2_MISO (pad K5) and CSIO_DAT9/ECSPI2_MOSI (pad D5) are connected to MCA processor. #MCA_INT is a signal reserved as interrupt between the MCA

processor and the i.MX6QP processor. The other signals are an SPI bus shared between the i.MX6QP and MCA processors. The usage and availability of these signals depends on the firmware running in the MCA processor.

- ON/OFF (pad D18) signal is connected to PMIC and MCA.
- #POR (pad E18) is connected to PMIC and i.MX6QP processor.

Specifications for the ConnectCore 6 Plus

Electrical characteristics	86
Power consumption	86
Environmental specifications	87

Electrical characteristics

Voltage supplies

Parameter	Min	Typ	Max	Unit
5 V supply	4.2	5	5.5	V
VCC_LICELL	2.0	3.0	TBD	V
LDO3_MCA	1.71	3.3	3.6	V

Note No specific ESD protection components have been implemented on the ConnectCore 6 Plus module. ESD protection level on the module's I/Os is the same as what is specified in the NXP datasheet. Any required ESD protection must be implemented on the carrier board.

Power consumption

This section contains power consumption data. The power is measured at the input of the SOM, i.e. VSYS input power rail. The power architecture of the SOM requires some of the PMIC regulators to be externally powered. These regulators are powered directly from some of the outputs of the PMIC itself (which are fed from VSYS).

No external circuitry is powered from any of the output power rails of the SOM, so that the power measured at VSYS corresponds to the consumption of the SOM alone.

Note These power consumption numbers should be considered guidelines only, never as fixed or absolute values. Actual values will depend entirely upon individual setup and system application.

Power consumption use cases

This section describes the use cases that were used to measure power consumption of the system-on-module.

- **Suspend** System in suspend-to-RAM mode.
- **Power-off** System in power-off with RTC enabled. RTC is running in the PMIC.
- **IDLE** System up and running. Ethernet and wireless disabled.
- **Decoding video** System up and running with the following configuration:
 - Ethernet and wireless disabled.
 - HDMI display connected to the system.
 - CPU decoding 1080p video.
- **CPU stress** System up and running with the following configuration:
 - Ethernet and wireless disabled.
 - Hanoi application running.

Global power consumption

The following table lists the global power consumption of the ConnectCore 6 and ConnectCore 6 Plus system-on-module when the system is under the use cases described above:

Digi Embedded Yocto 2.4

Power consumption (mA @ 5 V)		
Use case	ConnectCore 6	ConnectCore 6 Plus
Suspend	144	151
Power-off	4.8	5.9
IDLE	380	460
Decoding video	577.94	610.6 (+150.6)
CPU stress	1210	1090 (+630)

Digi Embedded Yocto 2.2

Power consumption (mA @ 5 V)		
Use case	ConnectCore 6	ConnectCore 6 Plus
Suspend	146	150
Power-off	4.8	6.2
IDLE	380	450
Decoding video	582	623 (+162)
CPU stress	1260	1120 (+659)

Environmental specifications

The i.MX6QP thermal specification is based on maximum junction temperature (Tj) of the specific application processor variant used. In order to support thermal management assistance through software, the i.MX6QP processor has a built-in junction temperature sensor/monitor.

The table below outlines the three temperature-related operational threshold modes with severity related recovery actions as defined in software.

Mode	Temperature (Tj)	Recovery action
Critical	> Max Tj - 5°C	Automatic system reboot to protect i.MX6QP from damage
Hot	> Max Tj - 15°C	i.MX6QP core and GPU frequencies are reduced Additional actions may be initiated depending on actual system implementation
Active	< Max Tj - 25°C	Limitations applied in Hot mode are removed again

Linux - Android users

You can measure the processor junction temperature by entering the following shell command:

```
cat /sys/class/thermal/thermal_zone0/temp
```

Note Depending on the operating system, the junction temperature is displayed in milli °C or °C.

The ConnectCore 6 Plus multichip module was designed to provide customers with unique options to simplify and support the implementation of thermal management approaches in their designs, as needed:

- The ConnectCore 6 Plus offers a fully shielded design (including internal thermal compounds) with optimized heat transfer and heat spreading for specific internal components (processor and PMIC). It is ideally suited for more efficient heat dissipation by providing a single, uniform surface for thermal management via enclosures, heat sinks or other means.
- The surface mount design of the ConnectCore 6 Plus allows for additional dissipation of heat through the carrier board it is mounted on.

Evaluation of the ConnectCore 6 Plus thermal performance has successfully demonstrated that the ambient operating temperatures specified can be supported by the module. However, actual ambient operating temperature performance may vary and is highly dependent on the specific use-case, such as enclosure design, system design, i.MX6QP processor variant, GPU/VPU activity, and on-module peripherals used. Your specific system design and application may require additional thermal management such as passive (heatsink/-spreader) or active (airflow) cooling at elevated temperatures.

ConnectCore 6 Plus variant	Ambient operating temperature	Storage temperature
Industrial	-40 to 85° C ¹	-40 to 125° C
Commercial	0 to 70° C	-40 to 125° C

CAUTION! ¹ Your final product may require additional thermal management such as passive (heatsink/spreader) or active (airflow) cooling to achieve the maximum operating temperature without exceeding the processor junction temp limit.

Contact Digi if you need information and/or guidance related to thermal management in your specific application.

Assembly instructions

Moisture sensitivity and shelf life	90
Mounting	90
Coplanarity	90
Solder paste print	90
Stencil	90
SMT pick and place	91
SMT process parameter reference	91
Reflow profile	91

Moisture sensitivity and shelf life

The ConnectCore 6 Plus module is classified as a Level 3 Moisture Sensitive Device in accordance with IPC/JEDEC J-STD-020.

1. Calculated shelf life in sealed packaging: 12 months at <math><40^{\circ}\text{C}</math> and <math><90\%</math> relative humidity (RH).
2. Environmental condition during production: 30°C / 60% RH according to IPC/JEDEC J-STD-033C paragraph 5.
3. After module is removed from sealed packaging, modules that will be subjected to reflow solder temperatures are required to be:
 - a. Mounted within 168 hours
 - b. Stored per J-STD-033
4. Baking is required, before mounting if:
 - a. the packaging humidity indicator indicates 10% RH or higher.
 - b. either 3a or 3b are not met
5. If baking is required, bake modules in trays for 4-6 hours at 125°C; maximum stacking height is 10 trays.

Mounting

The ConnectCore 6 Plus module has been designed with easy integration into existing SMT processes in mind. This section contains guidance for mounting the module on your carrier board.

Modules are not sealed and therefore they should not be subjected to a wash cycle or similar treatment where condensation could occur. Contact Digi International for guidance to discuss conformal coating approaches and options, if needed.

Coplanarity

The coplanarity measured is <math><0.003\text{''}</math> bow and twist (98% confidence interval). It is important that the carrier board is also coplanar. It is recommended that the assembly be supported during the reflow process with a fixture to minimize the potential bow of the carrier card.

Solder paste print

The following solder paste type has been approved for mounting the module on a carrier board:

- SAC305 No-Clean solder paste (Lead-free: Alpha OM-340 Type 4 or equivalent)

The following solder paste printing parameters are recommended:

- Stencil thickness: 0.125 mm/5 mil
- Stencil diameter: One to one of pad diameter (to +20% of pad)
- Paste alignment: 20% off the pad max (offset <math><20\%</math> pad diameter)

Stencil

The recommendation is to use a laser cut and/or electro-formed stencil. Based on the actual coplanarity characteristics of your carrier board, adjustments may be required to determine the optimal solder paste volume.

SMT pick and place

- Placement nozzle: Largest available on the machine
- Nozzle pick surface: Center of shield
- Placement speed: Slowest speed for the machine
- Placement alignment: 10% of pad diameter (compensating for module weight and supporting alignment). The module should be placed last as part of the assembly/mounting process to eliminate unexpected shifting.

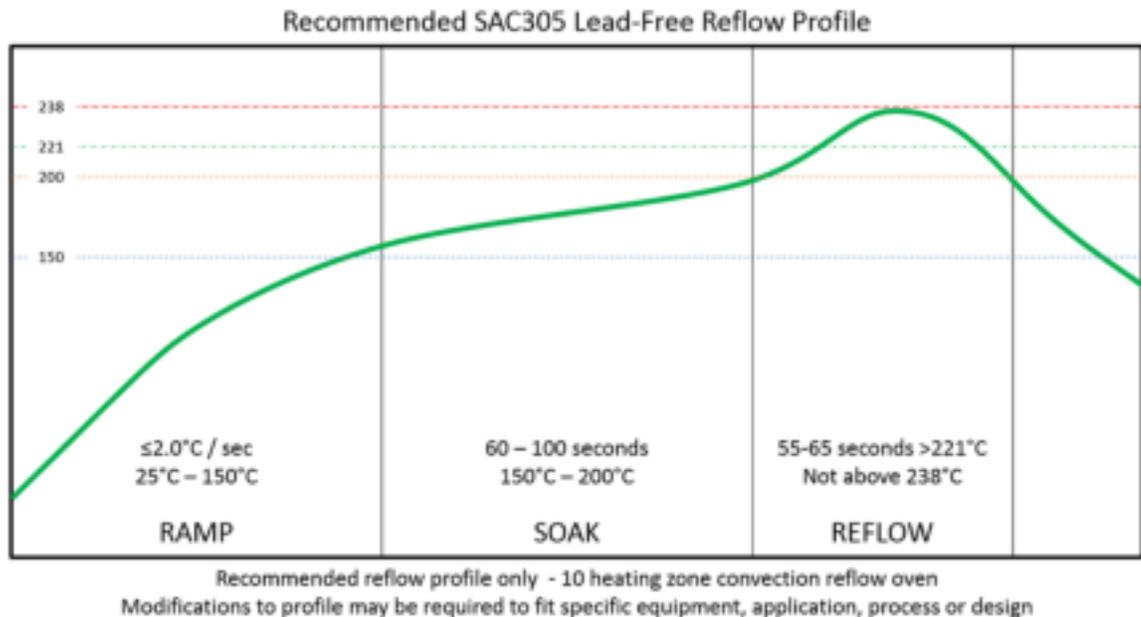

SMT process parameter reference

Process	SMT process	Specification recommendations
Screen print	Solder paste	SAC305 No-Clean (Alpha OM-340 or equivalent)
	Stencil thickness	0.15 mm / 5 mil
	Stencil diameter	1.47 mm / 58mil
	Paste alignment	20% maximum off center of the pad
PnP	Placement nozzle	Largest available on machine
	Nozzle pick surface	Shield center
	Speed	Slowest possible with PnP machine
	Placement sequence	Last, if possible
	Placement alignment	10% maximum off center of pad
Reflow	See the SMT profile recommendation	

Reflow profile

Digi recommends the following:

- SoM temperature below 238°C during reflow cycle.
- Time Above Liquidus (TAL) between 55 and 65 seconds.
- Use of 40AWG K-type thermal couple and M.O.L.E. or equivalent thermal profiler.

Digi recommends you use two (2) thermocouple locations to achieve proper attachment of SoM:

- Attach thermocouple to bottom of SoM located in the center of the cutout with the thermocouple touching the SoM.
- Drill hole through bottom of carrier PCB near corner of SoM deep enough to reach SoM.
- Insert thermocouple into hole touching SoM and secure.

Digi recommends X-ray analysis after reflow to confirm proper mounting and solder reflow.

The ConnectCore 6 Plus is approved to withstand a total of four (4) reflow cycles. Two (2) reflow cycles are required for manufacturing the ConnectCore 6 Plus module. Two (2) reflow cycles are remaining for mounting the module on the carrier board. Digi strongly recommends soldering the ConnectCore 6 Plus module during the last reflow cycles of the carrier board manufacturing process.

Regulatory information and certifications

United States FCC	94
Canada (ISED)	97
Europe ETSI and UKCA	98
Bluetooth SIG-qualified hardware and firmware	102
Japan	103

United States FCC

The ConnectCore 6 Plus module complies with Part 15 of the FCC rules and regulations. Compliance with the labeling requirements, FCC notices and antenna usage guidelines is required. To fulfill FCC Certification, the OEM must comply with the following regulations:

The system integrator must ensure that the text on top side of the module is placed on the outside of the final product.

ConnectCore 6 Plus module may only be used with antennas approved (see [FCC-approved antennas](#)).

Labeling requirements

WARNING! The Original Equipment Manufacturer (OEM) must ensure that FCC labeling requirements are met. This includes a clearly visible label on the outside of the final product enclosure that displays the contents shown below. Required FCC Label for OEM products containing the ConnectCore 6 Plus module.

Contains FCC ID: MCQ-CCIMX6P

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Maximum power and frequency specifications (FCC)

RF band	Peak antenna gain	Technology	Maximum transmit power at antenna connector	Frequencies
2.4 GHz	2.5 dBi	BT + EDR	8.8 mW (+9.5 dBm)	[BW 1 MHz] x 79 non-overlapping channels, # (center freq. MHz): * [2400 - 2483.5 MHz]: 0 (2402) to 78 (2480)
		Bluetooth LE	1.7 mW (+2.3 dBm)	[BW 2 MHz] x 40 non-overlapping channels, # (center freq. MHz): * [2400 - 2483.5 MHz]: 0 (2402) to 39 (2480)
		WLAN	66.7 mW (+18.2 dBm)	[BW 20 MHz] x 11 overlapping channels, # (center freq. MHz): * [2400 - 2473 MHz]: 1 (2412), 2 (2417), 3 (2422), 4 (2427), 5 (2432), 6 (2437), 7 (2442), 8 (2447), 9 (2452), 10 (2457), 11 (2462)
[BW 40 MHz] x 7 overlapping channels, # (center freq. MHz): * [2400 - 2473 MHz]: 3 (2422), 4 (2427), 5 (2432), 6 (2437), 7 (2442), 8 (2447), 9 (2452)				
5 GHz	4.6 dBi		21.3 mW (+13 dBm)	[BW 20 MHz] x 24 non-overlapping channels, # (center freq. MHz): * [5150 - 5250 MHz]: 36 (5180), 40 (5200), 44 (5220), 48 (5240) * [5250 - 5350 MHz]: 52 (5260), 56 (5280), 60 (5300), 64 (5320) * [5470 - 5725 MHz]: 100 (5500), 104 (5520), 108 (5540), 112 (5560), 116 (5580), 120 (5600), 124 (5620), 128 (5640), 132 (5660), 136 (5680), 140 (5700) * [5725 - 5850 MHz]: 149 (5745), 153 (5765), 157 (5785), 161 (5805), 165 (5825)
				[BW 40 MHz] x 11 non-overlapping channels, # (center freq. MHz): * [5150 - 5250 MHz]: 38 (5190), 46 (5230) * [5250 - 5350 MHz]: 54 (5270), 62 (5310) * [5470 - 5725 MHz]: 102 (5510), 110 (5550), 118 (5590), 126 (5630), 134 (5670) * [5725 - 5850 MHz]: 151 (5755), 159 (5795)
				[BW 80 MHz] x 5 non-overlapping channels, # (center freq. MHz): * [5150 - 5250 MHz]: 42 (5210) * [5250 - 5350 MHz]: 58 (5290) * [5470 - 5725 MHz]: 106 (5530), 122 (5610) * [5725 - 5850 MHz]: 155 (5775)

FCC notices

IMPORTANT: The ConnectCore 6 Plus module has been certified by the FCC for use with other products without any further certification (as per FCC section 2.1091). Modifications not expressly approved by Digi could void the user's authority to operate the equipment.

IMPORTANT: OEMs must test final product to comply with unintentional radiators (FCC section 15.107 & 15.109) before declaring compliance of their final product to Part 15 of the FCC Rules.

IMPORTANT: The ConnectCore 6 Plus module has been certified for remote and base radio applications. If the module will be used for portable applications, the device must undergo SAR testing. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: Re-orient or relocate the receiving antenna, Increase the separation between the equipment and receiver, Connect equipment and receiver to outlets on different circuits, or Consult the dealer or an experienced radio/TV technician for help.

FCC-approved antennas

The ConnectCore 6 Plus can be installed utilizing antennas and cables constructed with non-standard connectors (RPSMA, RPTNC, and so on).

The modules are FCC approved for fixed base station and mobile applications for the channels indicated in the tables below. If the antenna is mounted at least 20 cm (8 in) from nearby persons, the application is considered a mobile application. Antennas not listed in the table must be tested to comply with FCC Section 15.203 (Unique Antenna Connectors) and Section 15.247 (Emissions).

The following table shows the antennas that were used to certify the ConnectCore 6 Plus wireless module. These antennas can be replaced by others; however, further certification testing is required. The number of tests to be carried out can be decreased by using an antenna of the same type, i.e. dualband omnidirectional dipole, showing lower peak gain. In such case, only a spot check may be required by the certification laboratories to keep current certifications valid according to FCC regulations. If replacing by an antenna with higher gain, e.g. >2.5 dBi at 2.4 GHz band, complete radiated tests according to FCC regulations are required by the certification laboratories.

Antenna used to certify the ConnectCore 6 Plus wireless module

Part number	Type (description)	Peak gain 2.4 GHz	Peak gain 5 GHz
Digi International A24-HASM-450	Dipole (articulated RPSMA, 2.4 GHz antenna)	1.8 dBi	
Linx Technologies Inc ANT-DB1-RAF-RPS	Dipole (articulated RPSMA, 2.4 GHz and 5 GHz antenna)	2.5 dBi	4.6 dBi
Ethertronics 1001932	2.4 - 5 GHz PCB antenna	1.5-2.5 dBi	3-5 dBi

YAGEO ANTX100P001B24003 has been tested, but is not approved with standard firmware provided with the module. Please contact [Digi Technical Support](#) to receive dedicated calibration files / firmware to support this antenna. These files are reducing 2.4GHz output power to compensate for the higher gain of the YAGEO antenna.

Note If using the RF module in a portable application (for example - if the module is used in a hand-held device and the antenna is less than 20 cm (8 in) from the human body when the device is in operation): The integrator is responsible for passing additional SAR (Specific Absorption Rate) testing based on FCC rules 2.1091 and FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields, OET Bulletin and Supplement C. The testing results will be submitted to the FCC for approval prior to selling the integrated unit. The required SAR testing measures emissions from the module and how they affect the person.

RF exposure

CAUTION! To satisfy FCC RF exposure requirements for mobile transmitting devices, a separation distance of 20 cm (8 in) or more should be maintained between the antenna of this device and persons during device operation. To ensure compliance, operations at closer than this distance are not recommended. The antenna used for this transmitter must not be co-located in conjunction with any other antenna or transmitter. The preceding statement must be included as a CAUTION statement in OEM product manuals in order to alert users of FCC RF Exposure compliance.

Canada (ISED)

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Digi International Inc. has not approved any changes or modifications to this device by the user. Any changes or modifications could void the user's authority to operate the equipment.

Digi International Inc. n'approuve aucune modification apportée à l'appareil par l'utilisateur, quelle qu'en soit la nature. Tout changement ou modification peuvent annuler le droit d'utilisation de l'appareil par l'utilisateur.

Maximum power and frequency specifications

Note See the [table in United States FCC section](#), as the same channel plan and maximum transmit powers apply.

CAUTION! Due to the elimination of interference to the Terminal Doppler Weather Radar (TDWR), the operation of this device in the frequency range **5.60 – 5.65 GHz** is restricted in Canada.

Labeling requirements

Labeling requirements for Industry Canada are similar to those of the FCC. A clearly visible label on the outside of the final product enclosure must display the following text:

Contains Model CC-WMX-KK8D-TN Radio, IC: 1846A-CCIMX6P

Transmitters with detachable antennas

This radio transmitter (IC: 1846A-CCIMX6P) has been approved by Industry Canada to operate with the antenna types listed in the table above with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Le présent émetteur radio (IC: 1846A-CCIMX6P) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

Europe ETSI and UKCA

The ConnectCore 6 Plus module has been certified for use in several European countries. For a complete list, refer to www.digi.com.

If the ConnectCore 6 Plus module is incorporated into a product, the manufacturer must ensure compliance of the final product with articles 3.1a and 3.1b of the RE Directive (Radio Equipment Directive). A Declaration of Conformity must be issued for each of these standards and kept on file as described in the RE Directive (Radio Equipment Directive).

Furthermore, the manufacturer must maintain a copy of the ConnectCore 6 Plus Hardware Reference manual documentation and ensure the final product does not exceed the specified power ratings, antenna specifications, and/or installation requirements as specified in the user manual. If any of these specifications are exceeded in the final product, a submission must be made to a notified body for compliance testing to all required standards.

Maximum power and frequency specifications (Europe ETSI)

RF band	Peak antenna gain	Technology	Maximum transmit power at antenna connector	Frequencies
2.4 GHz	2.5 dBi	BT + EDR	4.9 mW (+6.9 dBm)	[BW 1 MHz] x 79 non-overlapping channels, # (center freq. MHz): * [2400 - 2483.5 MHz]: 0 (2402) to 78 (2480)
		Bluetooth LE	1.6 mW (+2.0 dBm)	[BW 2 MHz] x 40 non-overlapping channels, # (center freq. MHz): * [2400 - 2483.5 MHz]: 0 (2402) to 39 (2480)
		WLAN	55.8 mW (+17.5 dBm)	[BW 20 MHz] x 13 overlapping channels, # (center freq. MHz): * [2400 - 2483.5 MHz]: 1 (2412), 2 (2417), 3 (2422), 4 (2427), 5 (2432), 6 (2437), 7 (2442), 8 (2447), 9 (2452), 10 (2457), 11 (2462), 12 (2467), 13 (2472)
[BW 40 MHz] x 9 overlapping channels, # (center freq. MHz): * [2400 - 2483.5 MHz]: 3 (2422), 4 (2427), 5 (2432), 6 (2437), 7 (2442), 8 (2447), 9 (2452), 10 (2457), 11 (2462)				
5 GHz	4.6 dBi		22.3 mW (+13.5 dBm)	[BW 20 MHz] x 21 non-overlapping channels, # (center freq. MHz): * [5150 - 5250 MHz]: 36 (5180), 40 (5200), 44 (5220), 48 (5240) * [5250 - 5350 MHz]: 52 (5260), 56 (5280), 60 (5300), 64 (5320) * [5470 - 5725 MHz]: 100 (5500), 104 (5520), 108 (5540), 112 (5560), 116 (5580), 132 (5660), 136 (5680), 140 (5700)
			7.9 mW (+9 dBm)	* [5725 - 5850 MHz]: 149 (5745), 153 (5765), 157 (5785), 161 (5805), 165 (5825)
			22.3 mW (+13.5 dBm)	[BW 40 MHz] x 9 non-overlapping channels, # (center freq. MHz): * [5150 - 5250 MHz]: 38 (5190), 46 (5230) * [5250 - 5350 MHz]: 54 (5270), 62 (5310) * [5470 - 5725 MHz]: 102 (5510), 110 (5550), 134 (5670)
			7.9 mW (+9 dBm)	* [5725 - 5850 MHz]: 151 (5755), 159 (5795)
			22.3 mW (+13.5 dBm)	[BW 80 MHz] x 4 non-overlapping channels, # (center freq. MHz): * [5150 - 5250 MHz]: 42 (5210)

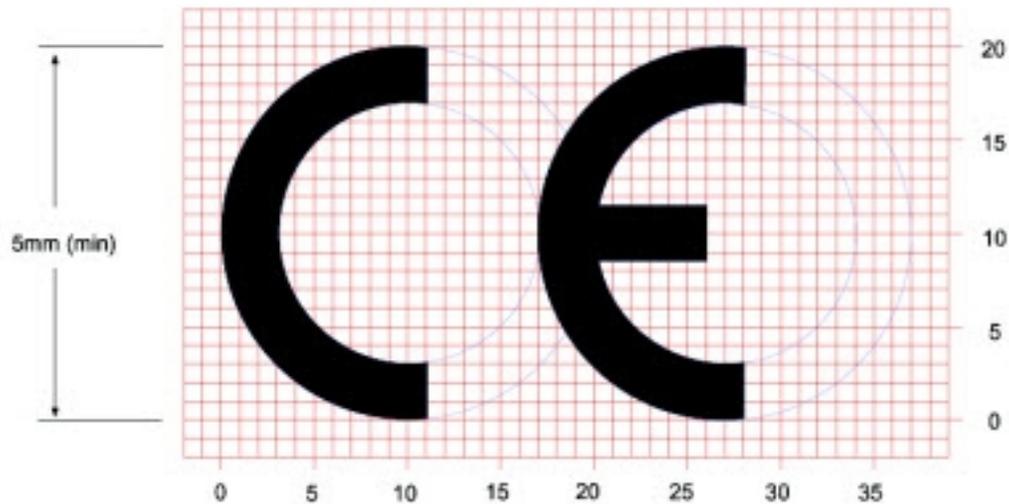

RF band	Peak antenna gain	Technology	Maximum transmit power at antenna connector	Frequencies
			dBm)	* [5250 - 5350 MHz]: 58 (5290) * [5470 - 5725 MHz]: 106 (5530)
			7.9 mW (+9 dBm)	* [5725 - 5850 MHz]: 155 (5775)

CE and UKCA OEM labeling requirements

The CE and UKCA markings must be clearly visible and legible when you affix it to the product. If this is not possible, you must attach these marks to the packaging (if any) or accompanying documents.

CE labeling requirements

The “CE” marking must be affixed to a visible location on the OEM product. The following figure shows CE labeling requirements.

The CE mark shall consist of the initials “CE” taking the following form:

- If the CE marking is reduced or enlarged, the proportions given in the above graduated drawing must be respected.
- The CE marking must have a height of at least 5 mm except where this is not possible on account of the nature of the apparatus.
- The CE marking must be affixed visibly, legibly, and indelibly.

UK Conformity Assessed (UKCA) labeling requirements

**UK
CA**

See <https://www.gov.uk/guidance/using-the-ukca-marking> for further details.

You must make sure that:

- if you reduce or enlarge the size of your marking, the letters forming the UKCA marking must be in proportion to the version set out below
- the UKCA marking is at least 5 mm in height – unless a different minimum dimension is specified in the relevant legislation
- the UKCA marking is easily visible, legible (from 1 January 2023 it must be permanently attached)
- the UKCA marking can take different forms (for example, the colour does not have to be solid), as long as it remains visible, legible and maintains the required proportions.

Important note

Digi customers assume full responsibility for learning and meeting the required guidelines for each country in their distribution market. Refer to the radio regulatory agency in the desired countries of operation for more information.

Declarations of Conformity

Digi has issued Declarations of Conformity for the ConnectCore 6 Plus module concerning emissions, EMC, and safety. For more information, see www.digi.com/resources/certifications.

Important note

Digi customers assume full responsibility for learning and meeting the required guidelines for each country in their distribution market. Refer to the radio regulatory agency in the desired countries of operation for more information.

Approved antennas

The same antennas have been approved for Europe as stated in the FCC table for use with the ConnectCore 6 Plus module.

Bluetooth SIG-qualified hardware and firmware

The ConnectCore 6 Plus is qualified by the Bluetooth SIG.

At the hardware level, the ConnectCore 6 Plus is listed as a Bluetooth 5.0 Controller Subsystem under the following identifiers:

- QD ID # 169178
- Declaration ID # D055494

The Digi BlueZ Bluetooth library in the Linux firmware is listed as a Host Subsystem under the following identifiers:

- QD ID # 99403
- Declaration ID # D037483

You can combine these hardware and firmware elements into a new end product that is Bluetooth Sig-qualified with no additional Bluetooth testing, as long as you do not introduce any modifications to the Bluetooth design.

Japan

電波法により5GHz帯は屋内使用に限ります。

This device has been granted a designation number by Ministry of Internal Affairs and Communications according to:

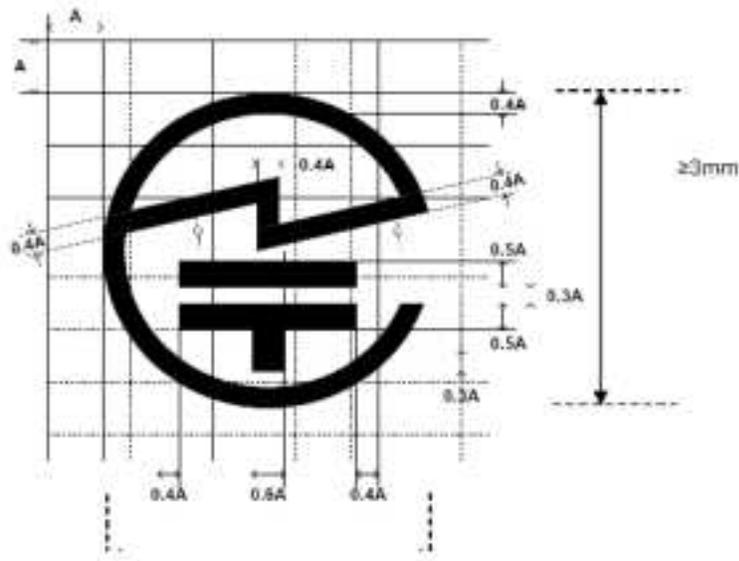

Ordinance concerning Technical Regulations Conformity Certification etc. of Specified Radio Equipment (特定無線設備の技術基準適合証明等に関する規則).

- Article 2, Paragraph 1, Item 19, 19-3
- Model/Name of equipment: ConnectCore 6P
- Radio label marking:
 - R: 202-DGJ110
 - T: D 21-0030 202

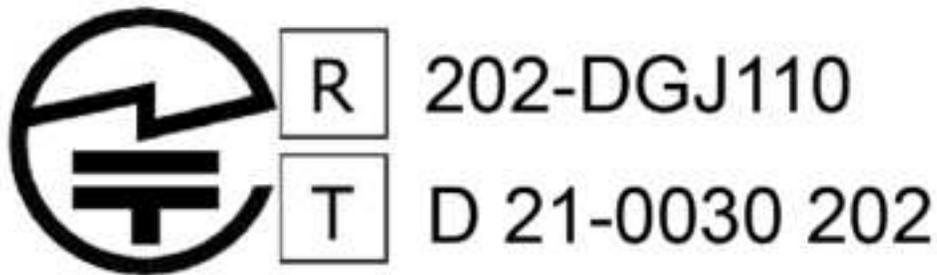

This device should not be modified (otherwise the granted designation number will be invalid).

- 2412 ~ 2472 MHz 13 channels
- 2422 ~ 2462 MHz 9 channels
- 5180 ~ 5320 MHz 8 channels
- 5190 ~ 5310 MHz 4 channels
- 5210 ~ 5290 MHz 2 channels
- 5500 ~ 5720 MHz 12 channels
- 5510 ~ 5710 MHz 6 channels
- 5530 ~ 5690 MHz 3 channels

Approval Label (MIC Marking)

Label text

Note End product label should support radio marking for Japan. If not, radio marking shall be documented in the user manual.

Note The warning “5GHz (W52, W53) band is for indoor use only (Excluding communication with registered stations)” must go on the end product – or E Label (Display).
