3 General Information

3.1 General Description of E.U.T.

| | Portable device |
|---------------|-----------------|
| Product Type: | Mobile device |
| | Fixed device |

3.2 Details of E.U.T.

| Power supply: | 3V DC(1.5V x 2 "AAA" Size Batteries) |
|----------------------|--------------------------------------|
| Operation Frequency: | 2420MHz to 2462MHz |
| Modulation Type: | GFSK |
| Number of Channels: | 43 |
| Channel Spacing: | 1MHz |
| Antenna Type: | Wire Antenna |
| Antenna Gain: | 0.52dBi |

Remark: The information in this section is provided by the applicant or manufacturer, SGS is not liable to the accuracy, suitability, reliability or/and integrity of the information.

3.3 Separation Distance

 Minimum test separation distance:
 5mm

 Remark: This minimum test separation distance is determined by the smallest distance from the antenna and radiating structures or outer surface of the device, according to the host form factor, exposure conditions and platform requirements, to any part of the body or extremity of a user or bystander.

3.4 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen Branch

No. 1 Workshop, M-10, Middle Section, Science & Technology Park, Nanshan District, Shenzhen,

Guangdong, China. 518057. No tests were sub-contracted.

3.5 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

A2LA (Certificate No. 3816.01)

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 3816.01.

VCCI (Member No. 1937)

The 3m Fully-anechoic chamber for above 1GHz, 10m Semi-anechoic chamber for below 1GHz, Shielded Room for Mains Port Conducted Interference Measurement and Telecommunication Port Conducted Interference Measurement of SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen EMC laboratory have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: G-20026, R-14188, C-12383 and T-11153 respectively.

• FCC – Designation Number: CN1336

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been recognized as an accredited testing laboratory.

Designation Number: CN1336. Test Firm Registration Number: 787754.

Innovation, Science and Economic Development Canada

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been recognized by ISED as an accredited testing laboratory.

CAB identifier: CN0006.

IC#: 4620C.

SZEMC-TRF-01 Rev. A/1

Report No.: SZCR241200494103 Page: 6 of 10

4 FCC Radiofrequency radiation exposure limits

Test exemptions apply for devices used in general population/uncontrolled exposure environments, according to the SAR-based, or MPE-based exemption thresholds.

4.1 Blanket 1 mW Blanket Exemption

The 1 mW Blanket Exemption of §1.1307(b)(3)(i)(A) applies for single fixed, mobile, and portable RF sources with available maximum time-averaged power of no more than 1 mW, regardless of separation distance.

The 1-mW blanket exemption applies at separation distances less than 0.5 cm, including where there is no separation. This exemption shall not be used in conjunction with other exemption criteria other than those for multiple RF sources in paragraph §1.1307(b)(3)(ii)(A).

The 1-mW exemption is independent of service type and covers the full range of 100 kHz to 100 GHz, but it shall not be used in conjunction with other exemption criteria or in devices with higher-power transmitters operating in the same time-averaging period. Exposure from such higher-power transmitters would invalidate the underlying assumption that exposure from the lower-power transmitter is the only contributor to SAR in the relevant volume of tissue.

4.2 MPE-based Exemption

General frequency and separation-distance dependent MPE-based effective radiated power (ERP) thresholds are in Table B.1 [Table 1 of §1.1307(b)(1)(i)(C)] to support an exemption from further evaluation from 300 kHz through 100 GHz.

| RF Sou | RF Source Frequency Minimum Distance | | | Minimum Distance | | | | |
|---|--|----------------|---------------------|------------------|---------------------|-------------------------|--|--|
| <i>f</i> ∟ MHz | | <i>f</i> ⊢ MHz | λ _L / 2π | | λ _H / 2π | W | | |
| 0.3 | - | 1.34 | 159 m | — | 35.6 m | 1,920 R ² | | |
| 1.34 | - | 30 | 35.6 m | — | 1.6 m | 3,450 R²/f ² | | |
| 30 | - | 300 | 1.6 m | - | 159 mm | 3.83 R ² | | |
| 300 | - | 1,500 | 159 mm | - | 31.8 mm | 0.0128 R ² f | | |
| 1,500 | - | 100,000 | 31.8 mm | - | 0.5 mm | 19.2R ² | | |
| Subscripts L and H are low and high; λ is wavelength. | | | | | | | | |
| From §1.1307(| From §1.1307(b)(3)(i)(C), modified by adding Minimum Distance columns. | | | | | | | |

. . .

The table applies to any RF source (i.e. single fixed, mobile, and portable transmitters) and specifies power and distance criteria for each of the five frequency ranges used for the MPE limits. These criteria apply at separation distances from any part of the radiating structure of at least $\lambda/2\pi$. The thresholds are

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <u>https://www.sgs.com/en/Terms-and-Conditions</u>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Cilent's instructions, if any. The state

SZEMC-TRF-01 Rev. A/1

Report No.: SZCR241200494103 Page: 7 of 10

based on the general population MPE limits with a single perfect reflection, outside of the reactive nearfield, and in the main beam of the radiator.

For mobile devices that are not exempt per Table B.1 [Table 1 of \$1.1307(b)(1)(i)(C)] at distances from 20 cm to 40 cm and in 0.3 GHz to 6 GHz, evaluation of compliance with the exposure limits in \$1.1310 is necessary if the ERP of the device is greater than *ERP*_{20cm} in Formula (B.1) [repeated from \$2.1091(c)(1); also in \$1.1307(b)(1)(i)(B)].

$$P_{\rm th} (\rm mW) = ERP_{20 \,\rm cm} (\rm mW) = \begin{cases} 2040f & 0.3 \,\rm GHz \le f < 1.5 \,\rm GHz \\ 3060 & 1.5 \,\rm GHz \le f \le 6 \,\rm GHz \end{cases}$$
(B.1)

If the ERP is not easily obtained, then the available maximum time-averaged power may be used (i.e., without consideration of ERP only if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole.

SAR-based exemptions are constant at separation distances between 20 cm and 40 cm to avoid discontinuities in the threshold when transitioning between SAR-based and MPE-based exemption criteria at 40 cm, considering the importance of reflections.

| Limit calculation | | | | | | |
|--|------|--------|-------|--|--|--|
| Frequency range Frequency(MHz) $R(\lambda/2\pi)(m)$ Threshold ERP(W) | | | | | | |
| 300~1500MHz | 915 | 0.0522 | 0.032 | | | |
| 1500~100000MHz | 2480 | 0.0193 | 0.007 | | | |

4.3 SAR-based Exemption

SAR-based thresholds are derived based on frequency, power, and separation distance of the RF source. The formula defines the thresholds in general for either available maximum time-averaged power or maximum time-averaged ERP, whichever is greater.

If the ERP of a device is not easily determined, such as for a portable device with a small form factor, the applicant may use the available maximum time-averaged power exclusively if the device antenna or radiating structure does not exceed an electrical length of $\lambda/4$.

As for devices with antennas of length greater than $\lambda/4$ where the gain is not well defined, but always less than that of a half-wave dipole (length $\lambda/2$), the available maximum time-averaged power generated by the device may be used in place of the maximum time-averaged ERP, where that value is not known.

The separation distance is the smallest distance from any part of the antenna or radiating structure for all persons, during operation at the applicable ERP. In the case of mobile or portable devices, the separation distance is from the outer housing of the device where it is closest to the antenna.

SZEMC-TRF-01 Rev. A/1

Report No.: SZCR241200494103 Page: 8 of 10

The SAR-based exemption formula of \$1.1307(b)(3)(i)(B), repeated here as Formula (B.2), applies for single fixed, mobile, and portable RF sources with available maximum time-averaged power or effective radiated power (ERP), whichever is greater, of less than or equal to the threshold P_{th} (mW). This method shall only be used at separation distances from 0.5 cm to 40 cm and at frequencies from 0.3 GHz to 6 GHz (inclusive). P_{th} is given by Formula (B.2).

$$P_{\rm th} (\rm mW) = \begin{cases} ERP_{20 \,\rm cm} (d/20 \,\rm cm)^x & d \le 20 \,\rm cm \\ \\ ERP_{20 \,\rm cm} & 20 \,\rm cm < d \le 40 \,\rm cm \end{cases}$$
(B.2)

where

$$x = -\log_{10}\left(\frac{60}{ERP_{20}\,\mathrm{cm}\sqrt{f}}\right)$$

and *f* is in GHz, d is the separation distance (cm), and *ERP*_{20cm} is per Formula (B.1).

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at https://www.sgs.com/en/Terms-and-Conditions. SZEMC-TRF-01 Rev. A/1

Report No.: SZCR241200494103 Page: 10 of 10

5 Measurement and Calculation

5.1 Maximum transmit power

The Antenna Gain: 0.52dBi

| Test Mode | Test Channel | Maximum Field Strength (dBuv/m) | E.I.R.P (dBm) | E.I.R.P (mW) |
|-----------|--------------|---------------------------------------|---------------|--------------|
| GFSK | 2420MHz | 79.90* | -15.33 | 0.03 |

(*) Note:

The Maximum Field Strength is based on the RF Test Report SZCR241200494102.

Note: EIRP = $pt \times gt = (E \times d)^2/30$ (According to ANSI C63.10 Annex G.1)

where

pt is the transmitter output power in watts

gt is the numeric gain of the transmitting antenna (dimensionless)

E is the electric field strength in V/m

d is the measurement distance in meters (m)

V/m =10^(((dBuV/m) -120) / 20)

5.2 RF Exposure Calculation

The Max EIRP is 0.03mW.

Remark: we used the maximum power between the conducted power and ERP/EIRP to perform RF exposure exemption evaluation.

| | Evaluation method | Exempt Limit(mW) | Verdict |
|-------------|-----------------------------------|------------------|---------|
| | Blanket 1 mW Blanket Exemption | 1mW | N/A |
| | MPE-based Exemption(ERP) | 7mW(ERP) | N/A |
| \boxtimes | SAR-based Exemption(<i>P</i> th) | 2.7mW | Yes |

So, the device is to qualify for SAR test exemption, the exemption report is in lieu of the SAR report.
