

The EUT is a frequency modulation Wireless Microphone System with following features:

Operation Frequency Range: 614MHz to 806MHz. Type of Modulation: FM, 189KF3E for headset.

This wireless microphone system is designed for two way communication, the headset unit with a microphone can modulate the voice to RF carrier and transmit it to the base unit, and the base unit receives the RF signals and demodulates the voice to send to any audio devices with an audio input terminal, a speaker or stereo. Also, the base unit has a microphone jet, to which a microphone can connect, and the user can use this to send a voice signal to the one who wears the headset.
