1. INTRODUCTION

1.1. OBJECT

This document presents the measurements results of tests performed on Nortel Networks UMTS iBTS according to FCC specifications.

1.2. SCOPE OF THIS DOCUMENT

This document applies to Nortel FDD

UMTS Indoor 2 iBTS

UMTS Outdoor iBTS

1.3. AUDIENCE FOR THIS DOCUMENT

This document is to be used by any person needing a view on Nortel FDD UMTS 1900 iBTS.

3. TEST RESULTS

3.1. INTRODUCTION

This document presents the RF tests performed for the qualification of the 1900 iBTS.

UMTS Indoor2 iBTS is feeded with -48V DC as standard configuration.

As an option, UMTS Indoor2 may be feeded with +24V DC, through an additional DC to DC converter (+24 V to -55 V).

UMTS Outdoor iBTS is feeded with 220V AC split phase.

The following information is submitted to introduce a Certification of the UMTS 1900 iBTS for Northern Telecom, Inc:

- According to 47CFR Part 24, Subpart E
- According to 47CFR Part 2, Subpart J

of the FCC Rules and Regulations. The measurement procedures were in accordance with the requirements of Part 2.947.

3.2. MEASUREMENT RESULTS

Table 1 is a summary of the measurement results performed in this report.

Description & Configuration code		Measurement Specification	Limit Specification	Test	Result
A	UMTS Indoor2 iBTS 45W STSR	FCC 2.1046	24.232	Maximum Output Power	Complies
		FCC 2.1049	-	Occupied Bandwidth	Complies
		FCC 2.1051, 2.1057	24.238	Spurious Emission at Antenna Terminals with single carrier and three carriers	Complies
B ¹	UMTS Indoor2 iBTS 30W STSR	FCC 2.1046	24.232	Maximum Output Power	Complies
		FCC 2.1051, 2.1057	24.238	Spurious Emission at Antenna Terminals with three carriers	Complies
C	UMTS Indoor2 iBTS 45W STSR TMA with DC/DC converter	FCC 2.1046	24.232	Maximum Output Power	Complies
		FCC 2.1051, 2.1057	24.238	Spurious Emission at Antenna Terminals with three carriers	Complies
D	UMTS Indoor2 iBTS 45W STSR with DC/DC converter	FCC 2.1046	24.232	Maximum Output Power	Complies
		FCC 2.1051, 2.1057	24.238	Spurious Emission at Antenna Terminals with three carriers	Complies
E	UMTS Indoor2 iBTS 30W STSR with DC/DC converter	FCC 2.1046	24.232	Maximum Output Power	Complies
F ²	UMTS Outdoor iBTS 45W STSR TMA	FCC 2.1046	24.232	Maximum Output Power	Complies
G	UMTS Outdoor iBTS 30W STSR TMA	FCC 2.1046	24.232	Maximum Output Power	Complies

Table 1. Measurement results performed for the qualification of the 1900 MHz

Test conditions in all the performed tests (temperature and nominal voltage) remain the same as the maximum output power test. For more details, please refer to the table 2.

¹ Occupied Bandwidth results for configurations code B to G are assumed to be similar to those of configuration code A since the same transceiver module is used (digital signal filtering & modulator).

² Spurious emissions results for UMTS Outdoor iBTS are assumed to be similar to those of configuration code C since the transmit RF chain remains unchanged.

3.3. MAXIMUM OUTPUT POWER

3.3.1 FCC REQUIREMENTS

- (a) Base stations are limited to 1640 watts peak equivalent isotropically radiated power (e.i.r.p.) with an antenna height up to 300 meters HAAT. See 24.53 for HAAT calculation method. Base station antenna heights may exceed 300 meters with a corresponding reduction in power. In no case may the peak output power of a base station transmitter exceed 100 watts.
- (b) Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage. The measurement results shall be properly adjusted for any instrument limitations, such as detector response times, limited resolution bandwidth capability when compared to the emission bandwidth, sensitivity, etc., so as to obtain a true peak measurement for the emission in question over the full bandwidth of the channel.

3.3.2 TEST RESULTS

The table 2 summarizes the maximum output power performed according to the iBTS configuration code as described in the section above.

CONFIGURATION CODE	TEST CONDITIONS		Base Station Maximum Output Power (dBm)			Nominal Output Power (dBm)
			Channel B 1932.4 MHz	Channel M 1960 MHz	Channel T 1987.6 MHz	
			Sector 1	Sector 2	Sector 3	
A	T _{nom} (25°C)	V _{nom} (49.8V)	44.96	45.5	45.4	45.2 ±2.7dB
B	T _{nom} (25°C)	V _{nom} (49.8V)	43.2	43.7	43.7	43.4 ±2.7dB
C	T _{nom} (25°C)	V _{nom} (24.03V)	41.5	42.3	42.2	41.7 ±2.7dB
D	T _{nom} (25°C)	V _{nom} (24.03V)	44.9	45.55	45.5	45.2 ±2.7dB
E	T _{nom} (25°C)	V _{nom} (24.03V)	43.2	43.8	43.7	43.4 ±2.7dB
F	T _{nom} (25°C)	V _{nom} (223.1V)	41.75	42.45	42.4	41.7 ±2.7dB
G	T _{nom} (25°C)	V _{nom} (223.1V)	39.9	40.6	40.6	39.9 ±2.7dB

Table 2. Measurements result for Maximum output power

For equivalent isotropically radiated power requirement, the sum of the antenna gain and the feeder losses should not be higher than 17.05dB.

3.3.3 TEST PROCEDURE

The equipment was configured as shown in Figure 1. A power meter has been used to performed the maximum output power test.

Figure 1. Test configuration to measure RF Output Power

The iBTS was configured to transmit at maximum power with 64 dedicated channels on the single carrier.

Figure 3. Sample plot for Occupied Bandwidth @ 1960 MHz

Figure 4. Sample plot for Occupied Bandwidth @ 1987.6 MHz

For the -26dB emission bandwidth, the results are almost the same:

B: 4.67 MHz - M: 4.63 MHz – T: 4.63 MHz

3.4.3 TEST PROCEDURE

The equipment was configured as shown in Figure 5.

Figure 5. Test configuration for Occupied Bandwidth

The iBTS was configured to transmit at maximum power (45W). Measurements were performed at bottom, middle and top frequency of the transmit channel on each sector.

The spectrum analyzer had the following setting:

Resolution Bandwidth	10 kHz
Video Bandwidth	100 kHz
Span	10 MHz
Sweep time	250 ms
Reference Level Offset	Corrected to take into account cables and attenuator losses

3.5. SPURIOUS EMISSIONS AT ANTENNA TERMINALS

3.5.1 FCC REQUIREMENTS

- (a) At any frequency outside a licensee's frequency block, the power of any emission shall be attenuated below the transmitter power (P) by at least $43 + 10 \log (P)$ dB.
- (b) Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater. However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 23 dB below the transmitter power.
- (c) When measuring the emission limits, the nominal carrier frequency shall be adjusted as close to the licensee's frequency block edges, both upper and lower, as the design permits.
- (d) The measurements of emission power can be expressed in peak or average values, provided they are expressed in the same parameters as the transmitter power.

3.5.2 TEST RESULTS

The reference level for spurious emissions at the antenna terminals is taken from the measured output power (45 dBm => 31.6 W).

Therefore the spurious emissions must be attenuated by at least:

$$43 + 10 \cdot \log(31.6) = 58 \text{ dB}$$

The measured output power was 45 dBm, therefore the limit is -13 dBm.

1. UMTS INDOOR2 IBTS, 45W MODE WITH SINGLE CARRIER

Table 4 to 6 show the the results for Spurious Emissions at Antenna Terminals for the configuration A.

Frequency band	SPURIOUS EMISSION LEVEL (dBm)	Margin (dB)	Limit (dBm)
	Channel B 1932.4 MHz Sector 1

3.5.3 TEST PROCEDURE

The equipment was configured as shown in Figure 6.

Figure 6. Test configuration for Spurious Emission

For these measurements, three benches have been used.

The bench 1 is used to measure spurious near the Tx band.

The bench 2 and 3 use respectively a stop band filter and a high pass filter in order to filter out the TX band of the iBTS and only measure the spurious created inside the iBTS.

The spectrum analyzer has the following setting in the 1 MHz bands immediately outside and adjacent to the frequency block:

Resolution Bandwidth	50 kHz
Video Bandwidth	5 / 500 kHz
Reference Level Offset	Corrected to take into account cables and attenuator losses

As regards to the other bands, the following setting is applied:

Resolution Bandwidth	1 MHz (see Note)
Video Bandwidth	10 MHz
Reference Level Offset	Corrected to take into account cables and attenuator losses

Note:

Just beside the 1 MHz bands immediately adjacent to the frequency block, the measure has been performed with 50kHz resolution bandwidth instead of 1 MHz. With this resolution bandwidth, **integrated over 1 MHz**, a better estimation of spurious power has been achieved (in the case of RBW 1MHz influence from the carrier power on the measurement has been observed)

3.6. CONCLUSION

FCC part 24 tests have been performed. Test results comply with all the requirements.

3.7. MEASUREMENT EQUIPMENT LIST

Table 19 is a list of the measurement equipments used in these tests.

Equipment Description	Manufacturer	Model	Serial Number	Calibration
Spectrum Analyzer	Rohde & Schwarz	FSEM	525495	25/07/02
Vector Signal Analyzer	Agilent	E4406A	525201	31/01/03
Power Meter	Gigatronics	8542C	511322	27/11/01
Power sensor	Gigatronics	80401A	515344	20/05/03
Power Supply	Hewlett Packard	E3630A	511497	27/03/03
Network Analyzer	Hewlett Packard	8719D	521768	03/12/01
Network Analyzer	Rohde & Schwarz	ZVRE	500701	08/08/01
Calibration Kit	Hewlett Packard	85032B	-	21/05/01
High Pass Filter	Trilithic	4HC2800/13 G-3-KK 9745041	23042	N/A
Notch Filter	TEMEX	CRL 21304006A	-	N/A
40dB attenuator	BIRD	50-A-MFN-40	-	N/A
10dB attenuator	Radiall	R417010128	-	N/A
30dB attenuator HF	Hewlett Packard	8498A	519473	N/A
Catapult	SUN Microsystems	ULTRA 10	530797	N/A
