

Dear Dennis,

Here are our answers:

Q1: Ans: I have uploaded an updated manual part 3.

Q2: Ans: In the SAR report, the antenna1 & antenna2 (Main & Aux ) can transmit and have test data of SAR, but the output power of page 6 is shown only the power of antenna2 , no antenna 1. For this loss, we update the SAR report. Please see the updated report. In the updated SAR report, you can find the output power still a little difference to the power of RF report, the main reason is the SAR is test in Intertek Lab. while the RF is test in ISL Lab.. The power measurement is a little difference between the both Lab.. But, the both Lab. test the same one of EUT.

Q3: Ans: See the page 40 to page 51 of the updated SAR report , you can find all the SAR plots. And, see Note1 of page 27, you will understand why the plot of Z-axis sometimes disappear.

Please review.

Thanks for your help

Daphne Liu
