Columbia, Maryland 21046

Dear Sir / Madam:

Enclosed please find an application for original equipment certification of our EVC50 family of professional Level 2 EVSE charging stations. The EVC50 is comprised of 2 major families considered as our Professional variants, the base unit provides WiFi, Bluetooth and RFID radio capabilities for use in commercial/professional applications. The second category is the EVC50 Plus which is a base unit with the addition of a LTE modem supporting cellular connectivity. An example customer SKU would be EVC50031001, which breaks down the family (EVC50), the product type (02 base, 03 LTE), and digits representing cable type and customer labeling options.

It is our intent to utilize our existing approved WiFi/BT radio set under FCC ID: **2BEYO-HEVSE50** in addition to a RFID radio/antenna set utilizing 13.56MHz under FCC Rule Part 15.225 as well as an optional LTE pre-approved module under FCC ID: **XMR201906EMO6A**. All of this would then be encompassed under FCC ID: **2BEYO-PEVC50** for the system.

Sincerely,

Jeff Martell  
Principal Engineer  
Evocharge, a company of Phillips and Temro Ind
