一、BT ANT

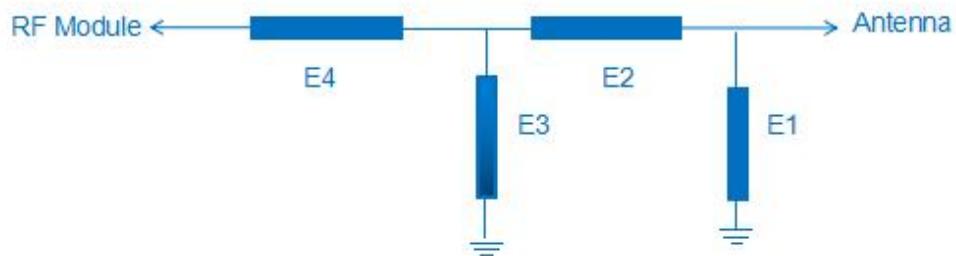

1、specifications

This acknowledgment mainly provides the testing status of the electrical and structural performance parameters of the BT antenna for the FT11 project. The following image shows the design of a BT antenna by Investec.

The working frequency range of the antenna in this project is 2400–2500MHz. The following are the electrical performance indicators for the antenna designed and produced by Investec.

WIFI		
Frequency band	Frequency (MHz)	VSWR
WIFI	2400~2500	≤2.0

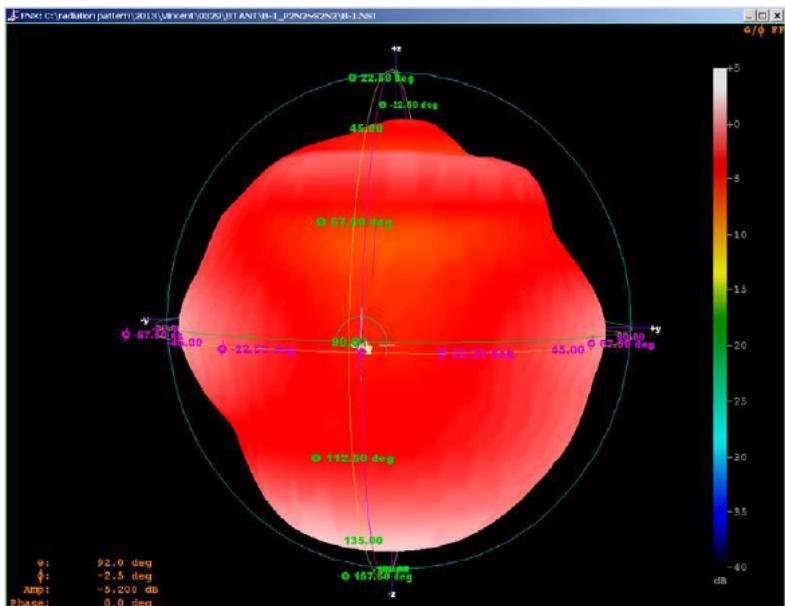

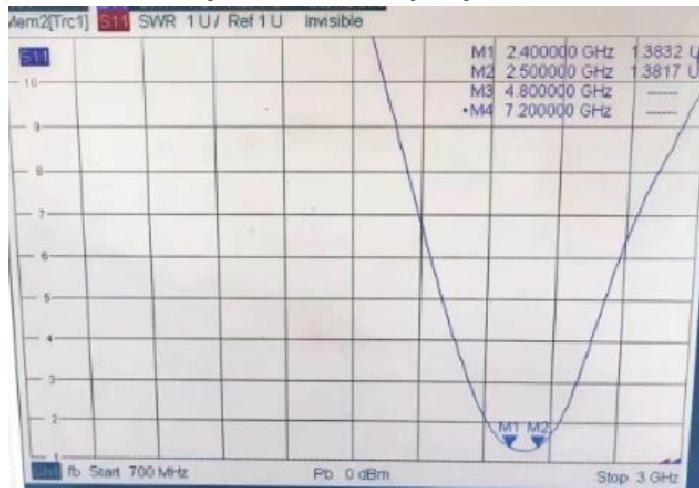

Confidential Information

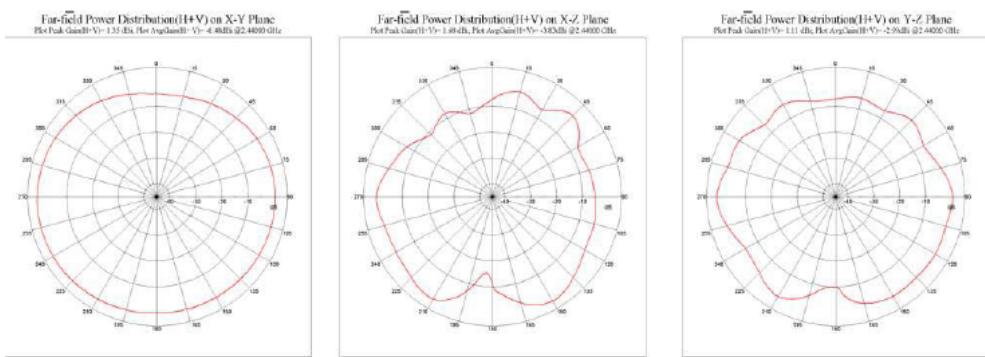

The matching circuit of the WIFI antenna is seen from the antenna end as a parallel electrostatic tube, connected in

series with a 2.2nH inductor, and connected in parallel with a 2.2pF capacitor.
