RE: FCC ID: LJPNPM-6
Attention: Kare Oksanen

I have a few comments on this Application.

- 1 The manual is not clear as to the accessories that have been tested for SAR and considered 'safe'. The accessories are not clearly defined in the manual. Also, some of the accessories tested are not those listed in the manual. For example the manual lists Head set HDS-3, while the SAR report states HDB-4 headset was tested. The SAR report states a model number for the strap as MBA-8, yet the manual gives no model number. The manual must reflect the accessories approved for SAR. Please define the accessories allowed for use with this device (i.e., correct the manual to reflect the headset tested, etc).
- 2 The Tune up procedure says the max. power is 29.5dBm (less than one watt), however, the manual says the device can be up to 2 W. Power references must be consistent in the application documentation. Please provide documents which contain the same referenced power levels.
- 3 The validation dipole was calibrated in Feb 2001. The cal due date is listed as Feb 2003. Please verify that the dipole validation kit is on a two year cycle.
