2.2. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Equipment	Model No.	Serial No.	FCC ID	Trade Name
1	1		1	1
Nata				

Note:

- 1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.
- 3. For conducted measurements (Output Power, 20dB Occupied Bandwidth, Carrier Frequencies Separation, Hopping Channel Number, Dwell Time, Spurious Emissions), the antenna of EUT is connected to the test equipment via temporary antenna connector, the antenna connector is soldered on the antenna port of EUT, and the temporary antenna connector is listed in the Test Instruments.

Report No.: TCT250422E028

4. Test Results and Measurement Data

According to KDB 447498 D01 General RF Exposure Guidance v06, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the commission's guidance.

The 1-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $\cdot [\sqrt{f}(GHz)] \le 3.0$ for 1-g SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation When the minimum test separation distance is < 5 mm, a distance of 5 mm
- according is applied to determine SAR test exclusion.
- The result is rounded to one decimal place for comparison

2.4G:

The maximum peak radiation emission for the EUT is 88.53dBuV/m at 3 m with frequency 2440 MHz, EIRP[dBm] = E[dBµV/m] + 20 log (d[m]) - 104.77 = -6.70dBm.

		,	L 3				-1/	
			Tune	Max.	Max.			exclusion
	Froqueney	Max.	up	Tune	Tune	Test		thresholds
Channel	Frequency (GHz)	Power	Power	up	up	distance	Result	for 1-g
		(dBm)	(dBm)	Power	Power	(mm)		SAR
				(dBm)	(mW)			SAR
CH 19	2.440	-6.70	-7±1	-6	0.25	5	0.08	3.0

Result:

Base on the calculation value, No SAR measurement is required.
