RE: CC&C Technologies, Inc.

FCC ID: PANWL1302

I have a few comments on the above referenced Application.

- 1) The 2 part statement provided on the label contains a misspelled word. The word shown as "undesured" should be "undesired". Please provide an updated label.
- 2) Will all the "copper tape" seen in the internal photographs be integrated into all production models? The modifications made do not appear to be a solution usable in production. Note that copper tape is considered by most to be a temporary fix. Due to the nature of the modifications, it is recommended that if the manufacturer provide a production level modified sample and all testing be performed on this sample. Please comment.
- 3) For the bandedge test, the marker should be placed on the highest emission falling in the restricted band. This does not appear to have been done for the low band side.
