Subject: 4045C EntryProx differences from the 4045B

One functional change:

1. Transaction History and User List downloads are no longer made via the Infrared LED, of the 4045B, to the optional HP Thermal Printer (4045-PRN). The Rev C model is compatible with the optional EntryProx DCD program, running on an optional Palm Zire 71 or Zire 72 PDA.
2. All other functions are identical between the 4045C and 4045B.

Hardware changes:

1. A second microprocessor has been added.
2. A ferrite bead is added on the antenna wires in the unit.
3. The unit now has an additional connector, P5, and circuit, which provides an RS-485 interface for future applications.

A handwritten signature in black ink, reading "Frank de Vall". The signature is stylized with a large, flowing "F" and "V".
