

ADDITIONAL INFORMATION RE: MAXRAD ANTENNA

The antenna is manufactured by MaxRad and is described as a low profile vertical antenna. Their standard part number for this antenna is MLPV800, covering the frequency range of 806 to 960 MHz. Trimble's antenna is a modified MLPV800, modified at the base so that it will mate properly to the TC900 antenna connector. The MaxRad part number for this Trimble antenna is Z661. The antenna consists of a brass vertical post and a brass disk at the top of the post. MaxRad has measured the antenna gain on the TC900 antenna mounting endcap and measured a peak gain of 2.3 dBi at 915 MHz.
