3.9 Exposure of Humans to RF Fields

FCC

DUT duty cycle is very low. The overall transmission time in an observation period of 100s is 270ms.

$$\begin{aligned} T_{\text{cycle}} &= 1/\text{PRF} = 556\text{ns} \\ T_{\text{Pulse}} &= 1.5\text{ns} \\ \text{DutyCycle} &= T_{\text{Pulse}}/T_{\text{Cycle}} = 0.0027 = 0.27\% \\ T_{\text{xOn in 100s}} &= 100\text{s} \times 0.0027 = 270\text{ms} \end{aligned}$$

The Source based Time Averaging Power is $0.01236\text{ W} \times 0.27\% = 33.37\text{ }\mu\text{W}$

The FCC have provided a new rule for devices operating over 6 GHz, where if the Maximum time averaged conducted power is 1mW or less then the radio would qualify for FCC SAR Exemption. Therefore this device qualifies for SAR exemption.

Canada

DUT duty cycle is very low. The overall transmission time in an observation period of 100s is 270ms.

$$\begin{aligned} T_{\text{cycle}} &= 1/\text{PRF} = 556\text{ns} \\ T_{\text{Pulse}} &= 1.5\text{ns} \\ \text{DutyCycle} &= T_{\text{Pulse}}/T_{\text{Cycle}} = 0.0027 = 0.27\% \\ T_{\text{xOn in 100s}} &= 100\text{s} \times 0.0027 = 270\text{ms} \end{aligned}$$

The Source based Time Averaging Power is $0.01236\text{ W} \times 0.27\% = 33.37\text{ }\mu\text{W}$

At the present time ISED Canada SAR Exemption calculations are valid only for frequencies up to and including 6 GHz, and RSS-102 Clause 2.5.1 refers. Furthermore, ISED Canada RF Exposure calculations are valid only for distances of 20cm or more. Therefore, the applicant cannot perform RF Exposure calculations at 4.5 cm for demonstration of compliance without ISED Canada permission.

The power density calculations at a minimum distance of 4.5cm based on power with no accounting for duty cycle is:

EUT	f Max Level (GHz)	Max EIRP Peak Level (dBm)	Max EIRP Peak Level (W)	Min distance to radiator (m)	Power Density Limit (mW/cm ²)	Power Density at Min distance (mW/cm ²)	Test Result
P2LPR	24.9783	1.77	0.00150	0.045	1.0	0.0059	PASS
P4LPR	24.9980	10.92	0.01236	0.045	1.0	0.0486	PASS
P5LPR	25.1066	9.60	0.00912	0.045	1.0	0.0358	PASS

(For Max EIRP Peak level emission test result details refer to chapter 3.3)
