### We Declare:

The equipment described above is tested by Tianjin Dongdian Testing Service Co., Ltd and in the configuration tested the equipment complied with the standards specified above. The test results are contained in this test report and Tianjin Dongdian Testing Service Co., Ltd is assumed of full responsibility for the accuracy and completeness of these tests.

## 1. General TEST Information

### 1.1 Description of EUT

<b>EUT Description</b>	:	Smart Tubular Motor
<b>Model Number</b>	:	N/A
<b>Frequency Band</b>	:	2400MHz-2800MHz
<b>Power Supply</b>	:	N/A
<b>Sample No</b>	:	Y24092909-01
<b>Antenna type</b>	:	PCB
<b>Note</b>	:	N/A

### 1.2 Accessories of EUT

Description of Accessories	Manufacturer	Model number	Description	Remark
N/A	N/A	N/A	N/A	N/A

### 1.3 Assistant equipment used for test

Description of Accessories	Manufacturer	Model number	Description	Remark
N/A	N/A	N/A	N/A	N/A

### 1.4 Block diagram of EUT configuration for test

### 1.5 Measurement uncertainty

Test Item	uncertainty
Near-field gain measurement	0.44 dB
Near-field pattern measurement	0.44 dB
Note: This uncertainty indicates that the extended uncertainty confidence interval is about 95% and the corresponding inclusion factor k=2 is obtained.	

## 1.6 Antenna Parameter

## 2. Electric performance measurement

### 2.1 General Information

Test Date	2024-10-18		
Test Condition	Temperature: 21.8±1℃	Humidity: 34±1%	Pressure: 101.3±0.2 kPa
Test Place	OTA Room	Test Engineer	Novak Wei

### 2.2 Test Equipment

Equipment	Manufacturer	Model No	Serial No	Last Cal.	Cal.Interval
ENA network analyzer	Keysight	E5071C	MY46900684	2024-05-06	1 year
Software	FEITU	ANTESTPRO	N/A	N/A	N/A

### 2.3 Block Diagram of Test Setup

### 2.4 Test Procedure

- (1) Set up the antenna to be measured. Set up the antenna and mark the cross reference line at the center of the antenna port surface to be measured.
- (2) Connect the cable connector and adjust the down dip Angle (electrically tuned antenna).
- (3) Open the test software, create the test project, and configure the test port.
- (4) Use test software for automatic testing and save test data of electromagnetic field distribution.
- (5) Change the port, down dip Angle, or test frequency (if necessary), and repeat steps (3) to (4) until all status data to be measured is collected.
- (6) After near and far field exchange, the three-position spherical pattern of the antenna to be tested is obtained, and the Theta and Phi angles of the position where the maximum level of the

three-position spherical pattern is located are found. The horizontal plane pattern curve of the antenna to be tested is obtained by cutting according to equal Theta Angle, and the vertical plane pattern of the antenna to be tested is cancelled by cutting according to equal Phi Angle. Then the radiation parameters of the horizontal plane and vertical plane pattern of the antenna to be measured are obtained by using the processing method similar to that of the far field.
