## GENERAL REPORT SUMMARY

This electromagnetic emission test report is generated by Compatible Electronics Inc., which is an independent testing and consulting firm. The test report is based on testing performed by Compatible Electronics personnel according to the measurement procedures described in the test specifications given below and in the "Test Procedures" section of this report.

The measurement data and conclusions appearing herein relate only to the sample tested and this report may not be reproduced in any form unless done so in full with the written permission of Compatible Electronics.

This report must not be used to claim product certification, approval or endorsement by NVLAP, NIST, or any agency of the federal government.

Device Tested: Smart Water Flow Detector  
Model: WL00Z-1  
S/N: None

Product Description: The WL00Z-1 is a wireless Smart Water Flow Detector utilizing a 500 series Z-Wave chip. The Smart Water Flow Detector can be wirelessly connected to a compatible Z-Wave controller/hub and controlled via your home automation software.

Modifications: The EUT was not modified in order to comply with specifications.

Manufacturer: Nortek Security & Control  
1950 Camino Vida Roble, Suite 150  
Carlsbad, CA 92008

Test Date: February 16 & 20, 2016

Test Specifications: EMI requirements  
  
CFR Title 47, Part 15 Subpart B Sections 15.107, 15.109, Subpart C Sections 15.205, 15.207, 15.209 and 15.249.

RSS GEN & RSS 210

Test Procedure: ANSI C63.4 & C63.10

**1. PURPOSE**

This document is a qualification test report based on the Electromagnetic Interference (EMI) tests performed on the Smart Water Flow Detector Model: WL00Z-1. The EMI measurements were performed according to the measurement procedure described in ANSI. The tests were performed in order to determine whether the electromagnetic emissions from the equipment under test, referred to as EUT (equipment under test) hereafter, are within the specification limits defined by RSS GEN, RSS210, and the Code of Federal Regulations Title 47, Part 15 Subpart B sections 15.107, 15.109, & Part 15 Subpart C sections 15.205, 15.207, 15.209 and 15.249.

## **2. ADMINISTRATIVE DATA**

### **2.1 Location of Testing**

The tests described herein were performed at the test facility of Compatible Electronics, 20621 Pascal Way Lake Forest, California 92630.

### **2.2 Traceability Statement**

The calibration certificates of all test equipment used during the test are on file at the location of the test. The calibration is traceable to the National Institute of Standards and Technology (NIST).

### **2.3 Cognizant Personnel**

Nortek Security & Control

Verdin Orozco Regulatory Engineer

Compatible Electronics, Inc.

Torey Oliver Test Technician

Matt Harrison Lab Manager

### **2.4 Date Test Sample was Received**

The test sample was received on February 16, 2016.

### **2.5 Disposition of the Test Sample**

The test sample remains at Compatible Electronics, Inc. as of the date of this test report.

### **2.6 Abbreviations and Acronyms**

The following abbreviations and acronyms may be used in this document.

|       |                                                     |

#### 4. DESCRIPTION OF TEST CONFIGURATION

##### 4.1 Description of Test Configuration

The Smart Water Flow Detector Model: WL00Z-1 (EUT) was setup in a normal use case configuration. The EUT was mounted on a copper pipe fixture and was connected to the EUT PSU and flow sensor strip via hardwired connection and power port respectively. The EUT was checked all 3 axis. The worst case was found to be the Z-Axis. The EUT was continuously transmitting a data stream during transmit tests and continuously receiving during receiver tests. For spurious emissions, the worst case emissions was when the EUT was monitoring water flow and the transmitter was awaiting a trigger.

The voltage was varied  $\pm 15\%$ ; the transmitting signal amplitude and frequency did not vary.

It was determined that the emissions were at their highest level when the EUT was transmitting in the configuration described above for Radiated Emissions. The final radiated data was taken in the above configuration. Please see Appendix E for the test data.

##### 4.1.1 Photograph Test Configuration (Fundamental Emissions Z-Axis)

#### 4.1.2 Cable Construction and Termination

##### Cables 1

This is a 3-meter, unshielded cable. It connects the EUT to the power supply. It was hardwired into the power supply end and has a barrel connector at the EUT end. The cable was bundled to a length of 1-meter.

##### Cable 8

This is a 30 centimeter, unshielded cable. It is connecting the EUT to the flow sensor strip. It is hardwired at the both ends. The cable was not bundled.

**5. LISTS OF EUT, ACCESSORIES AND TEST EQUIPMENT****5.1 EUT and Accessory List**

**6. TEST SITE DESCRIPTION****6.1 Test Facility Description**

Please refer to section 2.1 and the figures in Appendix D of this report for test location.

**6.2 EUT Mounting, Bonding and Grounding**

The EUT was mounted on a 0.8m high copper fixture, which was placed on the ground plane.

For above 1GHz the EUT was mounted 1.5 meters high.

The EUT was not grounded.

**6.3 Facility Environmental Characteristics**

When applicable refer to the data sheets in Appendix E for the relative humidity, air temperature, and barometric pressure.

## 7. CHARACTERISTICS OF THE TRANSMITTER

### 7.1 Channel Number and Frequencies

There are 2 operating channels and the EUT uses 2-key FSK/GFSK modulation schemes. The 908.4MHz channel uses the FSK modulation with a 40kbps or a 9kbps data rate. The 40kbps data rate was used for all testing since it was found to be the worst case. The 916MHz channel uses GFSK at a data rate of 100kbps. The gain settings were set to 13 for all units and channels.

### 7.2 Antenna

The antenna is made up of a wire soldered to the PCB.

## 8. TEST PROCEDURES

The following sections describe the test methods and the specifications for the tests. Test results are also included in this section.

### 8.1 RF Emissions

#### 8.1.1 Conducted Emissions Test

The EMI receiver was used as a measuring meter. A quasi-peak and/or average reading was taken only where indicated in the data sheets. The LISN output was measured using the EMI receiver. The output of the second LISN was terminated by a 50-ohm termination. The effective measurement bandwidth used for this test was 9 kHz.

Please see section 6.2 of this report for mounting, bonding, and grounding of the EUT. The EUT received its power through the LISN, which was bonded to the ground plane. The EUT was set up with the minimum distances from any conductive surfaces as specified in ANSI 63.4. The excess power cord was wrapped in a figure eight pattern to form a bundle not exceeding 0.4 meters in length.

The conducted emissions from the EUT were maximized for operating mode as well as cable placement. The final data was collected under program control by the computer software. The final qualification data is located in Appendix E.

#### Test Results:

The EUT complies with the limits of CFR Title 47 Part 15 Subpart B section 15.107, & Subpart C section 15.207, RSS GEN, and RSS 210.

### 8.1.2 Radiated Emissions (Spurious and Harmonics) Test

The EMI receiver was used as a measuring meter. The receiver was used in the peak detect mode with the "Max Hold" feature activated. In this mode, the receiver records the highest measured reading over all the sweeps. Amplifiers were used to increase the sensitivity of the instrument. There were preamplifiers used for frequencies above 1 GHz.

For spurious emissions the quasi-peak detector was used for frequencies below 1GHz and the average detector was used for frequencies above 1 GHz.

For the Harmonic emissions a linear average detector was used.

The measurement bandwidths and transducers used for the radiated emissions test were:

| FREQUENCY RANGE (MHz) | TRANSDUCER          | EFFECTIVE MEASUREMENT BANDWIDTH      |
|-----------------------|---------------------|--------------------------------------|
| .009 to .150          | Active Loop Antenna | 200 Hz                               |
| .150 to 30            | Active Loop Antenna | 9 kHz                                |
| 30 to 1000            | Combilog Antenna    | 100 kHz (120kHz for QP Measurements) |
| 1000 to 10000         | Horn Antenna        | 1 MHz                                |

The TDK FAC-3 shielded test chamber of Compatible Electronics, Inc. was used for radiated emissions testing. This test site is in full compliance with ANSI C63.4 & ANSI C63.10. Please see section 6.2 of this report for mounting, bonding and grounding of the EUT. The turntable supporting the EUT is remote controlled using a motor. The turntable permits EUT rotation of 360 degrees in order to maximize emissions. Also, the antenna mast allows height variation of the antenna from 1 meter to 4 meters. Data was collected in the worst case (highest emission) configuration of the EUT. At each reading, the EUT was rotated 360 degrees and the antenna height was varied from 1 to 4 meters in both vertical and horizontal polarizations (for E field radiated field strength).

#### Test Results:

The EUT complies with the limits of CFR Title 47 Part 15 Subpart B section 15.109, & Part 15 Subpart C sections 15.205, 15.209 and 15.249, RSS GEN, and RSS 210.

### 8.1.3 Fundamental Field Strength

The Peak Transmit Radiated Field Strength was measured at a 3-meter test distance. The EMI Receiver was used to obtain the final test data. The final qualification data sheets are located in Appendix E.

#### Test Results:

The EUT complies with Part 15 Subpart C, Section 15.249, and RSS 210.

### 8.1.4 Emissions Radiated Outside of the Fundamental Frequency Band

The Band Edge measurement was measured using the EMI Receiver at a 3-meter test distance to obtain the final test data. The lower and upper channels were tuned during the low and high band edge tests. The final qualification data sheets are located in Appendix E.

#### Test Results:

The EUT complies with Part 15 Subpart C, Section 15.205 & 15.249, and RSS 210.

**9. TEST PROCEDURE DEVIATIONS**

The test procedures were not deviated from throughout all tests.

**10. CONCLUSIONS**

The Smart Water Flow Detector Model: WL00Z-1 meets all of the relevant specification requirements defined in the Code of Federal Regulations Title 47, Part 15 Subpart B section 15.107, 15.109, & Subpart C sections 15.205, 15.207, 15.209, 15.249, RSS GEN, and RSS 210.
