

90.543(e)

Within the frequency band of 1559 MHz to 1610 MHz, there were two frequencies found which came from the EUT. The following are the two frequencies as well as their respective amplitude that includes the 0 dBi antenna factor.

- 1) 1588 MHz with a level of  $-109.4$  dBW/MHz
- 2) 1600 MHz with a level of  $-107.6$  dBW/MHz

The limit is the amplitude shall be less than or equal to 70dBW/MHz, therefore the EUT passes this section.
