

Instructions for use 14+_{age}

Dwi Dowellin D9

E-mail: service2@dowellin.com

Warnings & Precautions

Important Safety Instructions

- Read and follow all instructions.
- Keep these instructions for future reference.
- Head all Warnings.
- Intended for children ages 14 and higher. Adult supervision is required.
- Only use attachments/accessories specified by the manufacturer.
- Before flying, always check the body, rotors, and battery for any damage or obstructions.
- Battery should be free from cracks or swelling.
- Keep the rotor clear of any obstructions and body parts to avoid potential damage and injury.
- Manufacturer and dealer assume no liability for accidental damages from improper use or installation of parts, or from damage incurred from worn or broken parts.
- Pilots are responsible for their actions and any damage caused from improper use.
- Pilots should keep the craft in sight at all times during flight. If you lose sight of the craft at any time, power down and cease flight immediately.
- Only fly in large, open areas that are free from obstacles or potential hazards, such as trees, power lines, ceiling fans, and the like.
- Flying over bodies of water is not recommended.
- Flying at night is not recommended.
- Never try to retrieve the craft from areas you cannot safely reach, such as rooftops or trees.
- Never launch the craft from your hand.
- Never leave the craft unattended while it is powered on or while the battery is charging.

FCC Warnings

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult the dealer or an experienced radio/TV technician for help.
- Additional Warnings & Precautions**
- WARNING:** To reduce the risk of fire or electric shock, do not expose this apparatus to rain, moisture, dripping, or splashing.
 - CAUTION:** Use of controls or adjustments or performance of procedures other than those specified may result in personal injury.
 - WARNING:** Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
 - CAUTION:** Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type.
 - Lithium batteries, like all rechargeable batteries, are recyclable and should be recycled or disposed of according to state and local guidelines. They should never be disposed of in normal household waste, and they should never be incinerated, as they might explode. Contact your local government for disposal or recycling practices in your area.
 - WARNING:** Shock hazard - Do Not Open.
 - Battery shall not be exposed to excessive heat such as sunshine, fire, or the like.
 - Keep new and used batteries away from children, if the battery compartment does not close securely, stop using the product and keep it away from children.
 - If you think batteries might have been swallowed or placed inside any part of the body, seek immediate medical attention.
 - Do not mix old and new batteries.
 - Completely replace all old batteries with new ones.
 - Do not mix alkaline standard (carbon/zinc), or rechargeable (Ni-Cad, Ni-MH, etc.) batteries.
 - Batteries should be recycled or disposed of as per state and local guidelines.

Package contents

No	Part Name	Quantity
1	Drone	1
2	2.4 GHz Transmitter	1
3	Additional Propellers	4
4	USB Charging Cable	1
5	Propeller Screwdriver	1
6	Bonus Battery	1
7	Instructions for Use	1

Specifications

Drone
Model: D9
Weight: 26g
Flight time: 8-10minutes
Operating temperature range: 32° to 140°F (0° TO 40 °C)
Dimensions: 4.13"x4.13"x1.2"

Transmitter
Operating frequency: 2.4GHz
Max transmission distance: 164-328 feet (outdoor and unobstructed)
Operating temperature: 32° to 140°F (0° TO 40 °C)

Flight battery
Capacity: 300mAh
Voltage: 3.7V
Battery type: LiPo
Energy: 1.11 Wh
Charging temperature range 41° to 104°F (5° TO 40 °C)
Charging time: 30-40mins (depending on charging power)

- 02 -

Propellers Replacement

- Using the supplied propeller screwdriver, remove the propeller, by giving it a gentle pull.
- Install the propeller. Each propeller is marked either A1/A2 or B1/B2. Please install the propeller in the correct position as shown above. Otherwise the drone may fail to take off or fly out of control.

NOTES: A1+A2, B1+B2 (Power switch indicate the right of the drone)

- 03 -

Transmitter Functions

Transmitter Installation

- 04 -

Charging the Drone Battery

- Connect the battery plug to the USB charging plug.
 - Connect the USB charging cable (included) to the USB charging port on a computer or USB power adapter (not included).
- While charging, the charger light will turn OFF.**
When charging is complete, the light will display a red light.

Note:

- Be sure to correctly match the plug to the charging port or damage may occur.
- Do not charge overnight. Do not leave unattended while charging.
- When the drone's battery is low power, the LED lights on the drone will begin blinking fast, indicates that it just have 40-50s left to fly. At this time, you need to fly it to the safe area and press down the one key landing button to land it. If you fly it till it runs out of battery it will drop out of the sky.

Li-Po Battery Disposal & Recycling

Wasted Lithium-Polymer batteries must not be placed with household trash. Please contact local environmental or waste agency or the supplier of your model or your nearest Li-Po battery recycling center.

- 05 -

Flight Safety Information

Avoid flying over or near obstacles, crowds, high voltage power lines, trees, airport or bodies of water. Do not fly near strong electromagnetic sources such as power lines and those base stations as it may affect the onboard compass.

Stay away from the rotating propellers and motors.

No Fly Zone

Do not use the drone in adverse weather conditions such as rainy, snowy, foggy and windy conditions.
The basic flight guidelines are important for pilots' safety and the surroundings. Please read the safety guidelines carefully.

- 06 -

Get Your Drone Ready

- Rotating propellers can be dangerous. Do not start the motor when there are people nearby.
- If the motor is still spinning, always keep your hands on the transmitter.

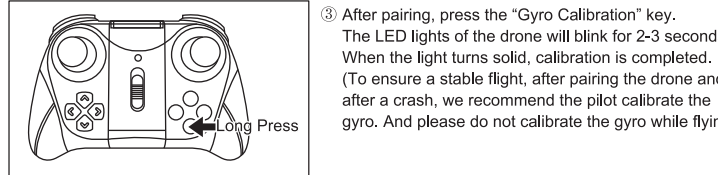

Pair the Drone

- Power on the drone and place it on a flat surface. The lights on the drone will blink as it searches for a signal from the transmitter. Be sure head facing forward and the tail facing towards the pilot.

- Turn on the transmitter, push the left control stick fully forward, wait for a Di to sound, then push the stick fully rearward, and wait for a second Di, and the lights on the drone stop blinking when the transmitter and the drone have paired successfully.

Calibrate the Gyro

Take Off the Drone

- After pairing and calibration, press down the one key take off/landing button, the drone will fly to the height of 80cm automatically. Then you can pull the left control stick up or down to adjust the height of the drone. Press the take off/landing button again, the drone will land automatically. After landing, wait for the propellers to stop spinning. Power OFF the transmitter Before powering off the drone. This will ensure that no signals are accidentally sent by the remote, reducing the chance of injury. After this is done, it is safe to pick up and power off the drone.

- 07 -

Flight Controls

Setting Trim & Countering Drift

Even after the drone is calibrated, it may show a tendency to drift while airborne. Adjusting the trim will help counter this effect and allow better control of this drone. But it will not entirely eliminate it. Air currents and other factors may still cause slight drift while airborne.

- 08 -

Altitude Hold

One Key Rotation/ One Key Spin

Short press the spin button, the drone will spin in a anticlockwise direction(A). And short press again to exit the spin mode(A). Long press the spin button, the drone will spin in a circles(B). And long press again to exit the spin mode(B). You can use the left control stick to adjust the height of the drone while in spin.

NOTE: Before you press the spin button, please make sure you fly the drone at least 8 feet away from any objects.

Speed Setting

- Low:** Provides smooth and predictable control of the drone. The remote will chime once to indicate the low speed setting.
 - Medium:** The drone will move and respond faster to all control inputs. The remote will chime twice to indicate the medium speed setting.
 - High:** Highest setting for maximum performance. The remote will chime three times to indicate the high speed setting.
- Note:** The 3 speed modes can only be cyclically changed in this order : low speed - medium speed - high speed - low speed.

- 09 -

Emergency Stop

3D Flip Mode

Before attempting a flip, be sure that there is enough clear space around the drone, ideally 9-10 ft. in all directions. It is not recommended to attempt to flip around or through any obstacles, as this may result in unintended damage.

Press the Flip button to activate Flip Mode, then move the Right Control Stick in any direction and the drone will perform a flip in the same direction. Press the Flip button again to deactivate without performing a flip.

Caution: the drone will perform these maneuvers best with a fully charged battery.

- 10 -

Headless Mode

- Place the drone in front of the pilot before pairing the drone to the transmitter. Make sure the head of the drone faces forward and the tail faces towards the pilot.
- After pairing and calibration, press the Headless Mode button to enter Headless Mode function. A beep will be heard from the transmitter, indicates that drone is in headless mode.
- Press the headless mode button again, you will hear a beep which indicates the drone exits the headless mode.
- Under Headless Mode, the forward direction is the direction the pilot faces when the pilot pairs the drone with the transmitter.

Please make sure the pilot to stay in the same orientation as the drone head faces when the drone takes off. It is very important that the pilot does not change the direction or orientation he or she faces, otherwise the drone and transmitter will lose connection, causing controls to not perform as desired. Please use Headless Mode and One Key Return function after you totally comprehend these functions; otherwise, it may result in the loss and/or damage of the drone.

- 11 -

One Key Return

With a press of the One Key Return button, the drone will return towards the original direction of take-off. You can rotate the right joystick in any direction to retake control of the drone and cancel the One Key Return Function. It is recommended to use the return function when headless mode is activated. NOTE: Please use one key return function after you totally comprehend these functions; otherwise, it may result in the loss and/or damage of the drone.

- 12 -

Trouble Shooting

PROBLEM	POSSIBLE CAUSES	SOLUTION
Drone does not respond to controls.	<ul style="list-style-type: none">No power to remote or drone.Poor contact between power plugs.Drone is out of range.	<ul style="list-style-type: none">Check remote batteries, replace if needed.Check drone battery, be sure it is fully charged.Be sure the power plugs are firmly connected.Be sure the remote has an unobstructed line of sight to the drone.Remain within the remote's 328ft. range
Drone is difficult to control or flies erratically.	<ul style="list-style-type: none">Gyroscopes may be misaligned.	<ul style="list-style-type: none">Power OFF remote and drone and reconnect (see pg.7).
Drone drifts while in flight.	<ul style="list-style-type: none">Trim not set or needs adjustment.	<ul style="list-style-type: none">Adjust trim settings (see pg. 8)
Drone suffers from mechanical trouble.	<ul style="list-style-type: none">Damage to body, propellers or other major components.	<ul style="list-style-type: none">Repair or replace parts as needed.
LED lights ON but drone does not respond to controls.	<ul style="list-style-type: none">Low battery power.	<ul style="list-style-type: none">Recharge the battery.

PRECAUTIONS

- The remote-control distance will be shorter when the power of drone/transmitter is insufficient.
- When the power of drone is insufficient, the drone would have trouble taking off or unable to fly high.
- Please repair the drone in time when it is damaged. Don't fly the drone when it is seriously damaged (rotor wing breakage), or it might lead to injury.
- Please remove the batteries or avoid the damage to the product caused by batteries leakage if you do not use the drone/transmitter for a long time.
- Don't crash the drone from high altitude or crash it seriously, or might shorten its lifetime.

Contact Us:

Please feel free to reach us at our e-mail if you need further support. We are always at your service. Please tell us your drone model and drone color when you send us a message.

FCC Warning Statement

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
