Project Palm VII

Subject: Class I permissive change

Palm distribution:

Outside distribution: FCC

To the FCC: Two designs are being submitted with the FCC ID: DF63C80500. The J11 revision was our first design which we are going to manufacture and sell, with your approval. Unfortunately, one of our vendors was unable to keep up with our predicted demand and so we have an immediate need to switch to a modified design, known as J13. Hence, it is our intent to sell both designs until the J11 parts run out. After that time, only J13 will be sold. Both J11 and J13 have been tested and passed with respect to Part 90.

I am submitting detailed descriptions of the block diagrams which explain the minor changes. The most significant change was the change in vendor for the T/R switch (transmit / receive) switch.

Thanks, Kam Oza
