

According to 447498 D04 Interim General RF Exposure Guidance v01 section 2.1.2, the available maximum time-average power not exceeding 1 mW is exempt from the test.

The Max. Electric field is 90.43 dBuV/m.at 3m.

$90.43 \text{ dBuV/m} = -4.8 \text{ dBm (EIRP)}$

$-4.8 \text{ dBm (EIRP)} - 4 \text{ dBi} = -8.8 \text{ dBm}$

The Max tune-up power is -8.5 dBm, therefore the Max.tune-up power is

$-8.5 \text{ dBm (0.14 mW) @ 915 MHz} < 1\text{mW}$

Note:

1. The Max.tune up power referred the AVG power of the test report
TMWK2411003831KR for MPE test exclusion purpose.
