

Model KR19A Keychain Remote Operational Description

The Model KR19A keychain remote control is a 310 MHz pulsed RF remote which works in conjunction with other X-10 home security products such as the model RR501, (FCCID: B4SRR501), Superregenerative receiver. The KR19A sends remote control commands (on/off or bright/dim) for up to two lights to the superregenerative receiver which in turn sends commands to an X-10 appliance module. The device is manually activated via one of the 6 pushbuttons and operates only during manual activation by the operator.
