RE: FCC ID: KBCIX260MPIA750BT

Attention: **Rod Munro**

I have a few comments on this Application.

1. The power listed in the technical specs for the Bluetooth device in the functional description file (max 20dBm or 100mW) is significantly higher than that tested (28mW or approx 14dBm). How is the power for this particular device controlled so as not to exceed the power level tested?
2. I do not find the report showing radiated spurious emissions with all three devices operating simultaneously. Please explain and provide this information.

Dennis Ward
