

ADDENDUM TO MODULAR INTEGRATION INSTRUCTIONS

Purpose: To describe the changes made to the original module integration instructions provided by the manufacturer, that are necessary for regulatory certification submission.

Original Document Title: Telit_ME310G1_Hardware_Design_Guide_r21.pdf

Effective Date: August 9, 2023

Description:

An amendment was made to change the RF Exposure parameters in the original Telit Module Integration Instructions document (Telit_ME310G1_Hardware_Design_Guide_r21.pdf). The current integration instructions state that the module has been approved for use in mobile equipment, but not portable equipment and that it has not been approved to be co-located with additional radios (page 82). This is amended to state that portable application and co-location has now been tested and RF exposure requirements are met when installed in portable equipment and co-located with FCC ID 2AQ8D3. The module has not been approved to operate simultaneously with any other antenna or transmitter.

The document was also amended to change the previous FCC ID: RI7ME310G1W1 to the approved FCC ID: 2AQ8D-RX-2.
