In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices. 						
	⊠A client device	n this mode it is able to sele e is defined as a device opera in client mode is not able to	ating in a mode in which the			
(5) For client devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes can not be modified by end user or an installer. ☐ Apply, ☒ No Apply (If apply, pls help to provide explanation on it was implement, and how software was controlled)
