Maximum Permissible Exposure Calculations

Date of Report: Aug 28, 2002

Calculations prepared for:

IP Mobile Net

11909 East Telegraph Road
Santa Fe Springs, CA 90670

Calculations prepared by:

Eddie Wong

110 N. Olinda Place
Brea, CA 9283

Model Number: IP4HPV-GPS

FCC Identification: MI7-IPMNIP4H

Fundamental Operating Frequency:

509-512MHz

Maximum Rated Output Power:

40.00 Watts

Measured Output Power:

34.00 Watts

In accordance with 47CFR2.1093(d)(2), source based time averaging is allowed for this type of device:

$$\begin{aligned}\text{Source Based Time Averaging} &= 20\text{LOG}(\text{ON time}/\text{TOTAL time}) \\ &= 20\text{LOG}(389\text{mS}/(389+310 = 699\text{mS})) \\ &= -5.09\text{dB}\end{aligned}$$

$$\text{Therefore the Power Output} = 46.02\text{dBm} (40.00\text{W}) - 5.09\text{dB} = \mathbf{40.93\text{dBm} (12.39\text{W})}$$

MPE Limit in accordance with 1.1310(b): Limits for general population/uncontrolled exposure

$$\text{MPE Limit for 509 MHz} = 509/1500 = \mathbf{0.3393 \text{ mW/cm}^2} (3.339\text{W/M}^2)$$

$$\text{MPE Limit for 512 MHz} = 512/1500 = 0.3413 \text{ mW/ cm}^2$$

Power Output (Watts)	Power Density Limit (mW/cm ²)	Minimum Distance (Meters)
12.39	0.3393	0.295

$$\text{Power Density (W/M}^2\text{)} = (30 * P_t * G) / (d^2 * Z_o)$$

P_t = Power Delivered to the Antenna

d = Distance in meters

G = Antenna Gain

Z_o = Impedance of Free Space

The typical vehicle used by police was measured, and a separation distance of 1 meter was found to be an appropriate distance. Under normal operating conditions, the antenna will maintain a separation of 1 meter from all persons. As can be seen from the MPE results, this device passes the limits specified in 1.1310 at a distance of 0.295 Meters (11.61 Inches).
