

Appendix B _ Radiated Test Data

FIELD STRENGTH OF SPURIOUS EMISSIONS

Note:

All antennas have been tested for radiated spurious emission,But the report only shows the worst data of the Avior antennal.

Radiated emission below 30MHz

The amplitude of spurious emissions from 9kHz to 30MHz which are attenuated more than 20 dB below the permissible value not need be reported.

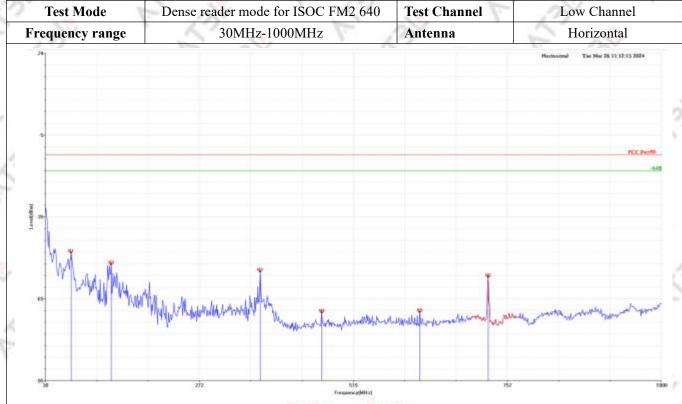

Radiated emission below 1000MHz and Radiated emission Below 1GHz

Test condition

Temperature	25.2°C	Relative Humidity	51%
Pressure	960mbar	Test Voltage	DC56V

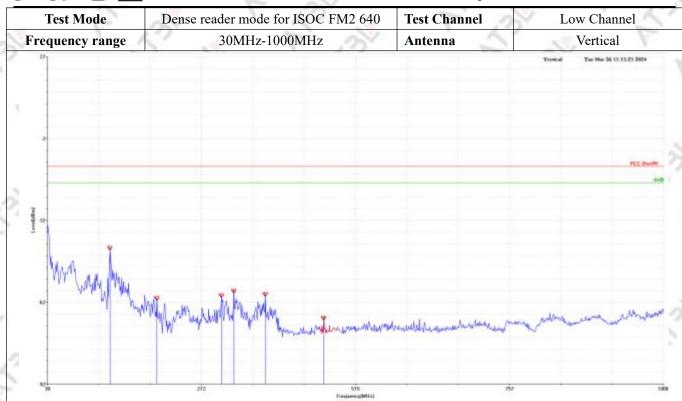

Test result
