## Additional Information

| Note    | Description                                                                                                                                                                                                                        |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Note 1: | Sweep of Analyser and Radar pulse waveform are triggered at the same time. Therefore, the radar pulses maybe can be seen at the trigger point of the trace. Analysis of the Sweeps excludes the covered time for the radar pulses. |
| Note 2: | The radar signal is simultaneously evaluated as the analyser sweep after radar injection.                                                                                                                                          |
| Note 3: | Measurement uncertainty due to sampling rate of 10MHz is 300ns (3 samples)                                                                                                                                                         |
| Note 4: | If user defined waveform is configured (myARB.wv) then no additional limits are available and measured values can not be checked.                                                                                                  |

## Additional Information

| Note    | Description                                                                                                                                                                                                     |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Note 1: | Because of the radar pulse event at the beginning, the investigation of the trace begins with an offset of 28.7 ms conforming to the end of the Radar burst.                                                    |
| Note 2: | Channel move time (CMT) / channel closing transmission time (CCTT) measurement was made with hi resolution video sweep using OSP DAQ channel                                                                    |
| Note 3: | Because of the substantially higher sampling rate of the video signal the results for CCTT and CMT are more accurate than in the graphics visible. Reached timing accuracy of the video trace: approx 4 $\mu$ s |
| Note 4: | The Non-Occupancy Period trace starts at the end of the Channel move time trace (20.000 secs.)<br>Labeling of the x-axis (time) is relative to its beginning (0 secs.)                                          |
