To Whom It May Concern,

RE: Labelling of WP7702 Module

The WP7702 module is a Surface Mount Device soldered onto the end product and is not possible for the end-user to replace or remove from the end product.

In an effort to reduce the amount of paper/plastic/adhesive label consumption and be a good environmental corporate role model, Sierra Wireless uses laser etching instead of the traditional labels for the module. The laser etching process requires a “no etch” circular area in the centre of the module so that modules can be picked up by vacuum nozzles.

The dimension of the module is shown in the drawing below.

FCC ID: N7NWP77B
IC: 2417C-WP77B

Due to the small size of the product and the “no etch” area (marked grey) required for the laser etching process, it is not practical to mark the FCC Identifier and IC certification number in a font size of 4 points or larger. Pursuant to FCC Rule §2.925, the FCC Identifier will be placed in the user manual and on the device packaging. Sierra Wireless hereby seeks agreement from ISED to place the IC certification number in the user manual in accordance with Section 4 of RSS-Gen Issue 5.

Sincerely,

A blue ink signature of Ying Wang, consisting of stylized, flowing cursive letters.
