RE: FCC ID: PPIRM-174_ATCB003857
Attention: Thomas Reitmayer

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that while there can be up to a 3dB difference in the ERP/EIRP levels between the EMC and SAR reports, when there is a difference the SAR report must be the higher value. Please note that the highest radiated power in the EMC report is 30.3dBm while the highest radiated power in the SAR report is only 28.9dBm. This means that the power level in the SAR is not the higher power level and is about 1.4dB lower than the EMC report. Please address this issue and retest as necessary so the higher power level is recorded in the SAR report as required by the FCC.
- 2.
