Hereby declare under our sole responsibility, that the product

Model Name: BROADCOM 54g Wireless LAN Mini PCI Card
Model No. BCM94306MPSPG

Had a power level set during test to a minimum of 15dBm Average power in the Packet for FCC/IC spurious emissions and SAR measurements. This average power corresponds to the peak power values recorded for conducted measurements in Cetecom Test reports EMC_488FCC15.247_2003 and EMC_494FCC15.247_2003 and ensures radiated emissions and SAR testing were performed at the same worst case rated power.

Bluetooth power levels were also set to the same highest rated power during Power Level, Spurious emissions and SAR testing.

11th August 2003

A handwritten signature in black ink, appearing to read 'Dan Lawless', is written over a horizontal line.
